ACKNOWLEDGEMENT

I would firstly like to express my sincere gratitude to my supervisor, Dr Fazilah Abdul Samad, for all the guidance that led to the completion of this research paper. She has been a great inspiration to me.

I would also like to thank my parents, Dr Lim Teh Eng and Madam Ang Cheng Loo, for their unfailing support and constant encouragement throughout the MBA course.

A very special thank you to Cik Rozaini Omar, from KLSE, who has been kind enough to provide me with the KLSE published data.

Finally, to all my friends who have assisted me one way or another in the preparation of this research paper, I would like to say thank you.
ABSTRACT

During economic boom periods, most shareholders and company regulators paid little attention to good corporate governance, hence the reason for weak corporate governance. This study investigates whether weak corporate governance has significant effects on the corporate performance, investment and financing patterns of selected public listed companies in Malaysia. Previous researches done by Xu and Wang (1997) and Saldana (1999) seem to show that there is a close link between these variables. Based on the regression model formulated in this study, a relationship between weak corporate governance with respect to corporate performance, investment and financing patterns have been established. From the regression analysis carried out, statistical tests have proven that a significant relationship holds for the relationship between weak corporate governance and corporate performance. However, the statistical tests for corporate investment and financing patterns are generally not significant. The Malaysian corporate sector has initiated steps to be taken to enhance good corporate governance. It is believed that if sufficient awareness is brought to the attention to the agents of companies, several corporate failures could have been avoided, and the status of these companies could probably be different today. The current development of these companies could be closely monitored and a further research could be carried out to ascertain that good corporate governance is essential for corporate performance, investment and financing patterns.
