ABSTRACT

The present study of a content analysis of chemistry texts is based on Halliday's theoretical position of viewing lexis as a linguistic level distinct from grammar. The principles underlying the study of lexis are consistent with a Firth-Halliday-Martin line of development in semantic relations. The study has aspired to analyse the lexis of two chemistry chapters extracted from two different general chemistry textbooks. Specifically, it has investigated how the text employs the resources of lexical cohesion to create meaning. The lexical analyses illustrate how the lexis of the texts are organised and how semantic continuity is maintained throughout the texts. These lexical analyses lead to the development of system networks which capture chemistry knowledge in a holistic subclassification and crossclassification manner. The networks embody features and options derived from a deeper level of analysis of the cohering lexical items of the texts. The findings suggest that the application of a Hallidayan model of language to explicate the text for its semantic relations is well substantiated. The findings also indicate that a system-structure theory of language which analyses lexis distributed along the syntagmatic and paradigmatic contexts of the text unravels the text as a semantic entity. The realm of scientific texts was investigated in the interest of shedding some light on the organisation of lexis. The insights gained from this study may help learners of English as a second language, specialising in a scientific discipline at the tertiary level, to interpret the texts of their subject specialisations more readily.

ACKNOWLEDGEMENTS

I have been very fortunate in having many people who have contributed tremendously to this thesis. It is a pleasure to show my gratitude and appreciation to them here.

I am especially grateful to my supervisor **Prof. Madya Dr. Eric Wong Tat Koon** for his advice and guidance. I would like to thank him for providing constructive criticism and giving useful suggestions concerning content and approach. I would like to thank him for introducing me to the theory of lexis and to systemic linguistics. I would also like to thank him for lending me books and articles, for sparing his time and for encouraging me in my work.

My deep appreciation goes to my parents; my mother for her love, encouragement and prayers and my father for his assistance in the graphic work. This thesis saw an early completion largely due to my parents who assisted greatly in caring for my little daughter Anisha, so that I could devote undivided attention to the writing of chapters four, five and six, while working on a full time job as a language teacher in the University of Malaya. I am grateful to have a

loving and understanding daughter who inspired me to carry on. The combined effort of family members has contributed immensely to the completion of the thesis.

I am indebted to the RELC library of Singapore, the Tun Seri Lanang library of the National University of Malaysia, the main library of the University of Malaya and the Faculty of Languages and Linguistics library of the University of Malaya for making available sources for my research. I would also like to take this opportunity to thank all my colleagues and friends for their kind words of encouragement.

Finally, I am ever grateful to be blessed with Prasad, my husband, who tirelessly assisted and encouraged me at every stage of my dissertation. His undying love and pride in my work has been the greatest source of inspiration. I dedicate this thesis to him.

LIST OF CONTENTS

ABSTRACT	ii
ACKNOWLEDGEMENTS	iii
LIST OF CONTENTS	v
 CHAPTER ONE : INTRODUCTION	
1.0 Introduction	1
1.1 Statement of the research area	1
1.2 Purpose of the study	2
1.3 Major research questions	4
1.4 Significance of the study	5
1.5 Rationale of the study	7
1.6 Limitations of the study	8
1.7 Conclusion	9
 CHAPTER TWO : REVIEW OF RELATED LITERATURE	
2.0 Introduction	10
2.1 Historical antecedents	10
2.2 The Hallidayan view of language	13
2.3 Halliday and Hasan's model of cohesion	15
2.4 Challenges to the 1976 model of cohesion	17
2.5 Subsequent studies on cohesion	20
2.6 The contributions of other neo-Firthian scholars	23

2.7	System networks	26
2.8	E S P research	27
2.9	Conclusion	29

CHAPTER THREE : RESEARCH METHODOLOGY AND FRAMEWORK OF THE ANALYSIS

3.0	Introduction	30
3.1	Selection of data	31
3.2	Collection of data	31
3.3	The Corpus	33
3.4	Operational definitions of key concepts used in the research	35
3.5	Methodology	38
3.6	Framework of the analysis	47
3.7	Conclusion	49

CHAPTER FOUR : FINDINGS

4.0	Introduction	50
4.1	The Analysis of Chapter Two: "Atoms and The Atomic Theory" (Petrucci & Harwood 1993)	54
4.1.1	The analysis of subtopic 2.1 on "Early Chemical Discoveries and The Atomic Theory"	54
4.1.2	The analysis of subtopic 2.2 on "Electrons and Other Discoveries in Atomic Physics"	61
4.1.3	The analysis of subtopic 2.3 on "The Nuclear Atom"	70
4.1.4	The analysis of subtopic 2.4 on "Chemical Elements"	75

4.1.5	The analysis of subtopic 2.5 on "Atomic Masses"	80
4.1.6	The analysis of subtopic 2.6 on "The Avogadro Constant and the Concept of The Mole"	85
4.1.7	The analysis of subtopic 2.7 on "Using the Mole Concept in Calculations"	88
4.2	The Analysis of Chapter Ten: "Gases" (Brown & Le May 1988)	91
4.2.1	The analysis of subtopic 10.1 on "Characteristics of Gases"	91
4.2.2	The analysis of subtopic 10.2 on "Pressure"	95
4.2.3	The analysis of subtopic 10.3 on "The Gas Laws"	98
4.2.4	The analysis of subtopic 10.4 on "The Ideal-Gas Equation"	102
4.2.5	The analysis of subtopic 10.5 on "Dalton's Law of Partial Pressures"	107
4.2.6	The analysis of subtopic 10.6 on "Molecular Weights and Gas Densities"	111
4.2.7	The analysis of subtopic 10.7 on "Quantities of Gases involved in Chemical Reactions"	114
4.2.8	The analysis of subtopic 10.8 on "Kinetic-Molecular Theory"	117

4.2.9	The analysis of subtopic 10.9 on "Molecular Effusion and Diffusion; Graham's Law"	124
4.2.10	The analysis of subtopic 10.10 on "Non-Ideal Gases Departures from the Ideal- Gas Equation"	133
4.3	Conclusion	139

CHAPTER FIVE : DISCUSSION OF THE FINDINGS

5.0	Introduction	140
5.1	Review of theoretical construct	141
5.2	Comparative study	144
5.3	Coding problems	150
5.3.1	The choice between two possible relationships	151
5.3.2	The choice between two lexical items	154
5.3.3	The lexical relationship between a symbol and a lexical item	156
5.4	Similarities and contrasts of findings with those of other researchers	158
5.5	Lexical cohesion and lexical coherence	161
5.6	Conclusion	162

CHAPTER SIX : CONCLUSION	163
