## ABSTRACT

The purpose of this study is to assess the effect of the monetary and fiscal policies on the Malaysian economy. In addition to this, the exchange rate policy is analyzed as well.

A simple structural model is developed based on the hybrid of Monetarist and Keynesian variants. Money multiplier approach is employed to explain the money supply process. The monetary sector is linked up with the real sector by the presence of real money supply as an argument in the consumption, investment and price functions. Government expenditure is endogenized. The domestic sectors and the external sector are linked up via the import function.

The model constructed is then subjected to dynamic and one-time shock simulation test in which it fares reasonable well as a whole. Monetary, fiscal and exchange rate policy simulations are conducted on the model. It is appears that a restrictive monetary policy is an effective means of improving the balance of payments position and curbing inflation. Whereas an expansionary fiscal policy tends to boost economic growth but deteriorate the balance of payments as well as exerts mild inflation. Finally, the findings suggest that exchange rate policy changes yield the largest influence upon the macrovariables of the economy, which may be reflected of the relative openness of the Malaysian economy.

## ACKNOWLEDGEMENTS

I wish to express my sincere thanks to my Supervisor, Mr. Rahman Ibrahim, who was always ready to help and offer advice despite his busy schedule. He has been very encouraging, patient and understanding and always a driving force behind my performance in the dissertation. He has also done everything he could for me so that I have been inspired to do my best.

Thanks also go to other people who assisted me in various ways, particularly, Dr. Muthi Semudram, Puan Zarina Yussof and Ms. Yap Su Fei for their kind and valuable suggestions related to this research.

I also wish to record my thanks to Mr. Wong Chee Seng from RAM, who provided me his excellence statistical software program to run the model. I would also like to convey my appreciation and special regards to Associate Prof. Dr. P. Sellappan who allowed me to made use of his laser printer.

I would also like to take this opportunity to record my thanks to friends and fellow classmates who have been helpful in one way or another. Last but not the least, I wish to extend my thanks to the University of Malaya for awarding me “Skim Bantuan Kewangan Siswazah Lanjutan” during my first and second years of study.
