Abstract

Chapter One *Introduction*

1.1 : Background of the experiment	1
1.2 : Brief introduction of short wavelength lasers	2
1.3 : Application of short wavelength laser	4
1.4 : Objective of this project	6
1.5 : Outline of the thesis	6

Chapter Two *Review of Literature*

2.1 : Review of the development of UV gas laser to shorter wavelength laser	7
2.2 : Excitation methods for shorter wavelength lasers	8
2.3 : Electrical discharge in gaseous	9
2.4 : Discharge criteria for soft x-ray and XUV lasers	11
2.5 : Amplified Spontaneous Emission	12
2.6 : Proposal for new way of scaling high current density discharge	15
2.7 : Pulsing circuit	17

Chapter Three *Experiment Setup*

3.1 : Introduction	22
3.2 : Experimental setup	23
3.3 : Design of laser channel	26
3.4 : Vacuum system	30
3.5 : The high voltage supply	31

3.6 : Pulse charging circuit	33
3.7 : Current measurement	36
3.8 : Output energy and optical pulse diagnostic	41
3.9 : Measurement of the wavelength of the optical output	42
3.10 : Measurement of divergence	43

Chapter Four *Result of Experiment*

4.1 : Discharge voltage waveform	44
4.2 : Laser output energy	53
4.3 : Result of current measurement	55
4.4 : The optical pulse detected	57
4.5 : The divergence of the laser beam	59

Chapter Five *Discussion*

5.1 : Output energy	61
5.2 : The current density	62
5.3 : Inductance of the discharge circuit	64
5.4 : The optical pulse and energy dumped	66
5.5 : Comparisons of two different electrode profile	67
5.6 : Impurity in the laser channel	67

Chapter Six *Conclusion*

6.1 : Conclusion	68
6.2 : Future study	70
