Chapter 1 – Introduction	
1.1 The Arowana	1
1.1.1 Description	1
1.1.2 Geographic distribution	2
1.1.3 Breeding	5
1.1.4 Trade of the Dragon fish	6
1.1.5 Conservation of the Dragon fish	8
1.2 Previous molecular studies on the arowana genome	9
1.3 Microsatellites	11
1.4 Randomly Amplified Microsatellites (RAMS)	14
1.5 Mutational model	16
1.6 Objective of this study	19
Chapter 2 – Materials	
2.1 Chemicals	20
2.2 Kits	23
2.2.1 BST TECH LAB, PURE-GENE™ PLASMID MINIPREP KIT	23
2.2.2 PROMEGA SILVER SEQUENCE™ DNA STAINING REAGENTS	24
2.2.3 INVITROGEN, TOPO TA CLONING KIT	24
Chapter 3 – Experimental Procedures	
3.1 Sample collection	25
3.2 Genomic DNA Extraction	26
3.3 Preparation of Luria-Bertani (LB) Plates	27
3.4 Cloning	27
3.4.1 PCR amplification	28
3.4.2 Setting up TOPO® Cloning Reaction	29
3.4.3 Transformation of TOPO® Cloning Reaction into One Shot® Chemically competent cells	29
3.4.4 Selection of White or Light Blue Colonies	30
3.5 Preparation for Hybridization	30
3.5.1 Transferring colonies to Nitrocellulose filter	30
3.5.2 Lysis of colonies and Binding of DNA to Nitrocellulose Filter	31
3.5.3 Pre-hybridization	31
3.5.4 3'-End labelling of oligonucleotide with terminal deoxynucleotidyl transferase recombinant (rTdT)	32
3.5.5 Hybridization	33
3.6 Inoculation of Bacteria in LB Broth	33

3.7	Miniprep Plasmid Extraction	34
3.8	DNA sequencing	35
3.9	Primer designing	36
3.10	Primer synthesis	36
3.11	PCR amplification for microsatellite	36
3.12	Acrylamide gel electrophoresis	37
3.13	Silver Staining	38
3.14	Statistical analysis	39
	3.14.1 Allele frequency	39
	3.14.2 Rho statistics	39
	3.14.3 Dendogram	40
Chapter 4 – Results and Discussion		
4.1	Genomic DNA Isolation	41
	4.1.1 Fish samples	42
4.2	Degenerate primer design and PCR testing	44
4.3	Cloning	45
4.4	Colony hybridization	46
4.5	Plasmid Minipreps Extraction	47
4.6	DNA sequencing	48
4.7	Primer design	52
4.8	Amplification of microsatellites using PCR	58
4.9	Statistical analysis	59
	4.9.1 Allele frequency	59
	4.9.2 Population differentiation, Rst	62
Conclusion		64
References		67
Appendix		73

List of Figures

Figures	Title	Page
1.1	A single primer targeting a (CA) _n repeat, anchored either at the 3' (light arrows) or at the 5' end (dark arrows) of the repeat, is used to amplify genomic sequence flanked by two inversely oriented (CA) _n elements.	14
4.1	Genomic DNA of Asian Arowana obtained from scales using TNES-Urea buffer.	43
4.2	PCR profile of genomic DNA using primer VJ1	45
4.3	Cloning hybridization for RAMS [VJ1; (CT) ₁₀]	46
4.4	Analysis of DNA from miniprep	47
4.5	PCR profile of representative <i>S. formosus</i> individuals using primer K10F and K10R	55
4.6	PCR profile of representative <i>S. formosus</i> individuals using primer K13F and K13R	55
4.7	PCR profile of representative <i>S. formosus</i> individuals using primer K16F and K16R	56
4.8	PCR profile of representative <i>S. formosus</i> individuals using primer K17F and K17R	56
4.9	PCR profile of representative <i>S. formosus</i> individuals using primer K20F and K20R	57
4.10	PCR profile of representative <i>S. formosus</i> individuals using primer K27F and K27R	57
4.11	PCR profile of representative <i>S. formosus</i> individuals using primer K29F and K29R	58
4.12	PCR profile of representative <i>S. formosus</i> individuals using primer K37F and K37R	58
4.13	Neighbor-Joining tree of arowana based on pair-wise Rst value	62

List of Tables

Table	Title	Page
1.1	Distribution of the sub-family Osteoglosinae	3
1.2	Geographic location of the dragon fish in South-East Asia	4
1.3	Classification of the various types of microsatellites	13
3.1	Sources of samples	25
3.2	Composition of PCR reaction for 5'-anchor PCR	28
3.3	Composition of cloning reaction	29
3.4	Reagents used for labeling the probe	32
3.5	Composition of PCR reaction for microsatellite amplification	36
3.6	Preparation of 4% and 10% acrylamide gels	37
4.1	DNA sequence of the plasmid inserts using M13 reverse primers	48
4.2	Microsatellite isolated with the 5' anchored method, using primer VJ1 at Ta = 59°C	53
4.3	Scleropages fromosus microsatellite primer pairs, including locus name, Genbank Accession number, repeat motif, primer sequence, specific annealing temperature (Ta).	54
4.4	Allele frequency for locus K10	59
4.5	Allele frequency for locus K13	59
4.6	Allele frequency for locus K16	59
4.7	Allele frequency for locus K17	59

4.8	Allele frequency for locus K20	60
4.9	Allele frequency for locus K27	60
4.10	Allele frequency for locus K29	60
4.11	Allele frequency for locus K37	60
4.12	Pair-wise difference of microsatellite Rst between 5 strains	62
