ADOLESCENTS IN FATHER-ABSENT HOMES:

A CASE STUDY

TONG SIEW KHENG

A Project Paper Submitted to the Faculty of Education,
University of Malaya, in Partial Fulfilment
of the Requirements for the Degree of
Master of Education

1998
ACKNOWLEDGEMENTS

My heartfelt gratitude goes to my supervisor, Puan Fatimah Haron, whose invaluable advice and guidance has help this project paper to take off the ground. No words can adequately express the extent I’m indebted to her for her help and encouragement throughout the process of writing this project paper.

To the two subjects in this study and their mothers, I would like to say a big ‘Thank you’. Without their cooperation and their willingness to share, this project paper will never become a reality.

A big ‘thank you’ also goes to the teachers of Sekolah Menengah Methodist and Sekolah Menengah Raja Mahadi for providing invaluable information regarding the subjects.

To all my friends and coursemates from whom I have received encouragement and assistance during my course, I would like to take this opportunity to say ‘thank you’.

Last but not least, to my daughters, Angeline and Christine, thank you for your patience and moral support. You are the motivating forces behind my entire educational pursuit for a Master of Education degree.
ABSTRACT

This project paper investigates the impact of father-absence on two adolescent boys in Malaysia. The subjects chosen were controlled in terms of their gender, race, and family socio-economic status. The modified Mooney Problem Checklist, the Malaise Inventory, the modified Child Behaviour Checklist and the Personality Test Inventory were used to collect the relevant data. Interviews were conducted with the subjects, their mothers and their teachers to gather further information regarding the subjects and their families.

Qualitative analysis of the data revealed that father-absence has negative impacts on the psychological adjustment, self-concept, and academic performance of the subjects. The results showed that adolescents from father-absent homes started smoking and drinking at a young age, performed badly in school, had poor self-concept, and portrayed many psychological and emotional problems like anxiety, aggression and depression.

However, the onset of father-absence and the age of the subjects were found to affect the impact of father-absence on adolescent development. Father-absence at a younger age was found to be more detrimental. In addition, adolescents' adjustment capacity appeared to be affected by their cognitive maturity because the younger subject portrayed more emotional instability and was more dependent compared to the older subject. However, as the subjects became more mature, they seemed to be more in control of their lives and appeared to be slowly distancing themselves from their deviant peers.
ABSTRAK

REMAJA DARIPADA KELUARGA YANG TIADA BAPA:
SATU KAJIAN KES

Analisa data secara kualitatif menunjukkan bahwa ketiadaan bapa dalam keluarga mempunyai kesan negatif terhadap penyesuaian psikologi, konsep-diri and pencapaian akademik remaja. Subjek-subjek dalam kajian didapati bermula merokok and minum arak ketika mereka berusia 14 tahun, pencapaian akademik mereka kurang memuaskan dan mereka mempunyai konsep diri yang buruk. Di samping itu, mereka mempamerkan masalah-masalah psikologi and emosi seperti kerunsingan, aggresif and kemuraman.

Walaubagaimanapun, kesan ketiadaan bapa terhadap remaja didapti adalah bergantung kepada umur remaja ketika mereka kehilangan bapa mereka dan juga kematangan remaja. Remaja yang bapanya meninggalkan mereka ketika mereka masih kecil menunjukkan lebih
banyak masalah penyesuaian berbanding dengan remaja yang kehilangan bapa ketika mereka lebih dewasa. Di samping itu, remaja yang lebih tua mempunyai kebolehan penyesuaian yang lebih baik berbanding dengan remaja yang lebih muda.
