

ABSTRAK

Pengeluaran kertas serata secara global adalah 4%. Walaubagaimanapun, di lokasi dinamic seperti China, pengeluaran kertas melebihi 8% pada dekad yang lalu. Jumlah pengeluaran kapasiti oleh kilang kertas Malaysia telah mencapai 1.3 juta ton/tahun manakala pengambilan kertas melebihi pengeluaran kapasiti. Di Kuala Lumpur, ibu kota Malaysia, kertas adalah komponent kedua besar dalam Municipal Solid Waste (MSW). Sektor kertas dan “pulp” merupakan salah satu konsumen sumber “kayu serat” yang terbesar, yang meninggalkan kesan terhadap iklim dengan mempengaruhi sumber perhutanan.

Universiti Malaya (UM), sebagai sebuah institut akademik, yang mempunyai lebih daripada 27,000 pelajar dan 1,700 staf akademik dengan 17 buah pusat kajian, telah dipilih untuk melaksanakan kajian sisa kertas. Objektif kajian ini adalah: (1) untuk mengendali dan mengukur pengeluaran sisa kertas di UM (Kolej Kediaman, fakulti, pusat kajian, institute dan pejabat pentadbiran) dan (2) untuk mengenalpasti pengurusan sisa-sisa kertas di UM. Metodologi yang digunakan untuk kajian ini adalah melalui pemerhatian, koleksi data, perkunjungan dan wawancara.

Selepas kajian, Kolej Kediaman Keduabelas mencatatkan pengeluaran sisa kertas terbanyak, iaitu 683.4 kg/bulan manakala Kolej Kediaman Pertama mengeluarkan sisa kertas yang kedua terbanyak, iaitu 480 kg/bulan. Selain itu, Kolej Kediaman Ketujuh menunjukkan statistics yang paling rendah dalam pengeluaran sisa kertas, iaitu 73 kg/bulan. Daripada fakulti berdasarkan program praktikal, Fakulti Kejuruteraan menghasilkan 33.9 kg kertas putih (yang paling banyak) manakala Pusat Sukan menghasilkan 3.6 kg. Selain daripada itu, daripada fakulti yang tidak mempunyai praktikal, Faculty of Built Environment menghasilkan 48.7kg kertas putih manakala Institut Asia Eropah menghasilkan 5kg kertas putih yang mencatatkan rekod

yang terendah. Keputusan daripada kajian menunjukkan pengeluaran kertas putih sebanyak 41.6kg daripada Bangunan Canselor manakala Muzium Seni Asia mencatatkan 7.9kg. Pusat Pentadbiran dan Bahagian Kewangan, dan Jabatan Pendaftaran merupakan pembekal sumber kertas kepada semua Kolej Kediaman dan pejabat pentadbiran manakala sesetengah fakulti mendapatkan sumber kertas mereka daripada pembelian di luar UM. Jabatan ini pada tahun 2008 telah membeli 50,000 rim kertas dan jumlah ini meningkat sebanyak 40% pada tahun 2009 kepada 70,000 rim kertas.

ABSTRACT

The average global paper production growth was 4% annually. However, in some dynamic region such as China, this amount exceeded 8% in the last decade. Total production capacity of Malaysian paper mill reached 1.3 million tonnes/year while the consumption of paper is more than the production capacity. In Kuala Lumpur, the capital city of Malaysia, the second most abundant component of Municipal Solid Waste (MSW) is paper. Paper and pulp sector are one of the main consumers of fibrous wood resources which, has significant impact on the climate change by effecting forest resources.

University of Malaya as an academic institute with more than 27,000 students and 1,700 academic staff with 17 faculties and research centers was chosen for the study on waste paper. The objectives of this study are: to identify and quantify of waste paper generation in UM (Residential Colleges, Faculties, Research Center, Institute and Administration offices) and to identify of waste paper management in University of Malaya. The methodology used for this research is from observation, data collection, site visit and interview.

It was found that, Twelfth College generated 683.4 kg/ month of white paper which is the highest among the other residential colleges and First College is in the second by 480 kg/month. Seventh College generated the lowest amount by 73 kg/month. From the faculties based on practical courses, Faculty of Engineering generated 33.9 kg of white paper which is highest and sport center generated 3.6 kg. On the other hand, from the Faculties with no practical Faculty of Built Environment generated the amount of 48.7 kg of white paper and Asian Europe Institute with 5 kg is the lowest one. Results shown that Chancellery Building generated 41.6 kg of white paper while Art Asia Museum was the lowest with 7.9 kg. Administration and Finance

Division, Registration Department is supplied paper for all Residential Colleges and Administration offices while some faculties purchased their paper from outside the UM. This department in 2008, purchased 50,000 reams of paper and in 2009 it was increased by 40% to 70,000 reams of paper.

ACKNOWLEDGEMENTS

The author wishes to sincerely thank the following people:

I am heartily thankful to my supervisor, Professor Dr. Agamuthu, whose encouragement, guidance and support from the initial to the final level enabled me to develop an understanding of the subject.

I would also thanks to Mr. Musavi from Pars Paper Factory for his kindly cooperation during the data collection.

Finally, the author wishes to acknowledge her family, for their patience, inspiration and total support. A special thank you must go to my husband, my children and my parents for their continue support and care shown during my study. This work is dedicated to them.

The last not the least I offer my regards and blessings to all of those who supported me in any respect during the completion of the project.

POOPAK SOTOODEHNIA 2011
