CHAPTER

1 INTRODUCTION 1

1.1 Solar dryer greenhouse 1

1.2 Scope of dissertation 3

1.3 Proposed method 5

1.4 Outline of the dissertation 6

2 LITERATURE REVIEW 7

2.1 Solar dryer history 7

2.2 Design and development of greenhouse solar dryer 10

2.3 CFD application in greenhouse development 13

2.3.1 Two dimensional and three dimensional CFD analyses 14

2.3.2 CFD analysis for mono span greenhouse with pitched roof design 16

2.4 Governing equations 17

2.4.1 Navier-Stokes equation 17

2.4.2 Turbulence model 18

2.4.3 Heat transfer model 21

2.4.4 Modeling for buoyancy 22

3 METHODOLOGY 25

3.1 CFD Simulation 25

3.1.1 Pre-processing stage 26

3.1.1.1 Geometry creation 26

3.1.1.2 Mesh development 28

3.1.1.3 Physical properties set-up 29

3.1.1.4 Boundary condition 32

3.1.2 Solving 34

3.1.3 Post processing 35

3.2 Physical measurement 36

4 RESULTS AND DISCUSSION 41

4.1 Mesh sensitivity study 41

4.2 Convergence trend 43

4.3 Solar dryer greenhouse with both roof and

side opening open (condition 1) 44

4.3.1 Temperature for location P1 until P9 45

4.3.2 Temperature distribution from CFD simulation 46

4.3.3 Air flow velocity profile 47

4.3.4 Data analysis and discussion for solar dryer with roof and side opening 48

4.4 Solar dryer greenhouse with roof opening open and side opening close (condition 2) 51

4.4.1 Temperature for location P1 until P9 52

4.4.2 Temperature distribution from CFD simulation 53

4.4.3 Air flow velocity profile 54

4.4.4 Data analysis and discussion for solar dryer with side opening only 55

4.5 Overall data analysis and discussion 58

5 SUGGESTIONS FOR IMPROVEMENT 60

5.1 Introduction 60

5.2 Proposed design 62

5.3 Comparison of current and new design solar dryer greenhouse 65

5.3.1 Temperature distribution 65

5.3.2 Air flow velocity 68

6 CONCLUSIONS 70

6.1 Future work 71

REFERENCES 72

LIST OF TABLES

TABLE

1.1 Conditions considered in the study 3

3.1 Domain properties 31

3.2 Polyethylene properties 31

3.3 Air properties 32

3.4 Temperature sensor specification 37

3.5 Solar radiation sensor specification 37

3.6 Wind speed and wind direction sensor specification 38

4.1 Difference of outside temperature (T_{out}) and inside temperature (T_{in}) data between simulation and measured for condition 1.. 50

4.2 Difference of outside temperature (T_{out}) and inside temperature (T_{in}) data between simulation and measured for condition 2. 57

LIST OF FIGURES

FIGURE

1.1 Solar dryer greenhouse building at MARDI 4

1.2 Steps included in performing the CFD analysis in this project 5

2.1 Classification of solar dryers and dryer modes. (Fudholi et al., 2010) 9

2.2 Different types of natural circulation greenhouse type crop dryers. (Koyuncu, 2006)..... 11

2.3 Natural convection solar dryer greenhouse (Ekechukwu and Norton,1996) 12

2.4 Large scale tunnel type solar dryer using polycarbonate cover design (Janjai et al.,2011) 12

2.5 The number of published peer-reviewed publications of CFD applied to the ventilation of agricultural buildings (Norton et al,2007). 13

2.6 Influence of the turbulence model on the flow pattern at the symmetry plane of a confined flow (Moureh and Flick, 2005 as quote by Norton et al ,2007) 21

3.1 ANSYS CFX module (ANSYS CFX Introduction, 2009)..... 25

3.2 Three-dimensional computational domain 27

3.3 Tetrahedral mesh 28

3.4 Model after the meshing process 28

3.5 Sun radiation at 10.30 am 33

3.6 Sun radiation at 1.30 pm 33

3.7 Sun radiation at 4.30 pm 33

3.8 CFX solver solution process flowchart solver (ANSYS CFX Solver theory guide, 2009 34

3.9 Temperature sensor 36

3.10 Solar radiation sensor 37

3.11 Wind speed and wind direction sensor 38

3.12 Location of temperature and humidity sensor inside the greenhouse 39

3.13 Location of sensor inside greenhouse 40

3.14 Location of sensor outside greenhouse 40

4.1 Solar dryer greenhouse model with different numbers of element (a) 0.6 m (b) 0.4m (c) 0.1 m and (d) 0.05m 41

4.2 Temperature of location P1, P2 and P3 for model with different numbers of element 42

4.3 Convergence trends of the simulation 43

4.4 Temperature for each location at (a) 10.30 am, (b) 1.30 pm, and (c) 4.30 pm on 13th March and 21st March 2011 1 45

4.5 Temperature distribution contour at (a) 10.30 am, (b) 1.30 pm, and (c) 4.30 pm and on 13th March and 21st March 2011 11 46

4.6 Air flow velocity profile at (a) 10.30 am, (b) 1.30 pm, and (c) 4.30 pm and on 13th March and 21st March 2011 47

4.7 Measured and CFD-simulated air temperature differences for inside (T_{in}) (average) and outside (T_{out}) for solar dryer with

side and roof opening open at (a) 10.30 am, (b) 1.30 pm and (c) 4.30 pm 49
4.8 Temperature for each location at (a) 10.30 am, (b) 1.30 pm, and (c) 4.30 pm on 26th March and 4th April 2011..... 52
4.9 Temperature distributions contour at (a) 10.30 am, (b) 1.30 pm, and (c) 4.30 pm on 26th March and 4th April 2011..... 53
4.10 Air flow velocity profile at (a) 10.30 am, (b) 1.30 pm, and (c) 4.30 pm on 26th March and 4th April 2011..... 54
4.11 Measured and CFD-simulated air temperature differences for inside (T_{in}) (average) and outside (T_{out}) for solar dryer with roof opening only at (a) 10.30 am, (b) 1.30 pm and (c) 4.30 pm..... 56
5.1 Designs to be considered in the improvement study (a) design 1 and (b) design 2 63
5.2 Result comparison of current design, design 1 and design 2 for (a) temperature and (b) air flow velocity 64
5.3 Temperature distribution for improved and current design solar dryer at (a) 10.30 am, (b) 1.30 pm and (c) 4.30 pm 65
5.4 Temperature for each location at (a) 10.30 am, (b) 1.30 pm and (c) 4.30 pm 67
5.5 Air flow velocity distribution at (a) 10.30 am, (b) 1.30 pm and (c) 4.30 pm..... 68
5.6 Air flow velocity at (a) 10.30 am, (b) 1.30 pm and (c) 4.30 pm 69
