## **PENGHARGAAN**

Ingin saya megambil kesempatan di sini untuk merakamkan berbanyak-banyak terima kasih kepada semua mereka yang membantu dan memberi perangsang kepada saya untuk melaksanakan kajian projek ini dengan jayanya.

Kepada yang berbahagia Prof Madya Dr.Kariem Aroff, saya megucapkan ribuan terima kasih di atas segala nasihat dan bimbingan yang diberikan kepada saya , dan hanya ALLAH yang akan membalas segala jasa baiknya.

Kepada yang berbahagia Prof Madya Dr. P. Agamuthu saya mengucapkan ribuan terima kasih di atas segala tunjuk ajar pada saya untuk memahami Konsep Pengurusan Alam Sekitar.

Tidak lupa kepada saudara Shamem, kakitangan RSD Engineering Sdn Bhd , isteri tersayang dan anak-anak (Izzat, Amirah, Ashikin) yang memberi sokongan moral kepada saya bagi menjayakan projek ini.

### *Peringatan:-*

- Adalah dimaklumkan laporan projek ini adalah berdasarkan kajian ilmiah sahaja dan segala keputusan kajian adalah berdasarkan data-data saintifik dan segala lapurannya adalah terpelihara daripada hakciptanya

## **ABSTRACT**

The interstitial waters at the sites in Mukim Klang (Site 1 near Port Klang, and Site 2 near Shahpadu Toll), in the District of Sabak Bernam (Site 3 near Sg. Lang and Site 4 at landfill) and in the District of Teluk Intan (Site 5) have been analysed by Atomic Absorption Spectroscopy (AAS). The heavy metals obtained are, Fe, Mn, Pb, Zn, Ni, Cu and Cd . Ca is considered as alkaline earth element .The concentrations of these metals are in general above the permissible limit for domestic water supply and therefore must be treated and purified before the water can be used for domestic consumption. The effect of soil pH and moisture content on heavy metal distribution with depth into the soil have also been studied. It is found that the soil pH is slightly alkaline in nature ranging from 7.3 to 7.9. This could be attributed to the high Ca content in the interstitial water. This is quite true for the sites at Sg. Lang and landfill. However other factors are also influential to the distribution of heavy metals in interstitial water. Lateral and vertical movements of water and leachate could also be deciding factors on the heavy metal content and distribution with depth into the soil. This appears true for the same metals at other sites under study. Landfills should be lined with a containment system that will allow very little leakage to pass through its bottom lining so that ground water pollution can be prevented.

## **CONTENT**

	Page
<b>Chapter 1 Introduction</b>	<b>1</b>
<b>Chapter 2 Literature Review</b>	
2.1 Water Resources	6
2.2 Groundwater	8
2.3 Increasing Water Supply	12
2.3.1 Diversions	
2.3.2 Damming	
2.3.3 Desalination	
2.3.4 Cloud Seeding	
2.4 Water pollution	19
2.4.1 Definition	
2.4.2 Types of water pollutants	
2.4.2.1 Biological Agents	
2.4.2.2 Energy-Rich Organic Chemicals	
2.4.2.3 Biochemical Oxygen Demand	
2.4.2.4 Inorganic Chemicals That Enrich	
2.4.2.5 Chemical Poisons	
2.4.2.6 Heat	
2.4.2.7 Floating Solids and Liquids	

2.4.2.8 Suspended or Sedimentary Solids	
2.4.2.9 Color	
2.4.2.10 Radioactive Substances	
2.4.2.11 Inorganic Salts, Acids and Alkalies	
<b>2.5 Water pollution sources</b>	<b>35</b>
2.5.1 Municipal Sewage	
2.5.2 Water Pollutants from Farms	
2.5.3 Water Pollution from the Production of Coal	
2.5.4 Water Pollution from the Production, Transports, and Use of Oil	
<b>2.6 The pollution of Groundwater</b>	<b>41</b>

### **Chapter 3 Experimental**

3.1 Field sites	43
3.2 Sampling	44
3.3 Derivation of interstitial water from soil	46
3.4 Atomic Absorption Spectroscopy (AAS)	46
3.5 Soil Properties	49
3.6 Determination of the moisture content	49
3.7 Determination of the pH value	51

## **Chapter 4 Results and Discussion**

4.1 Introduction	53
4.2 Heavy metals and their concentration	53
4.3 Heavy metal distribution in landfill at Sabak Bernam	69
4.4 Soil moisture content	72
4.5 pH of soil	73
4.6 Influence of soil pH and soil moisture on heavy metal distribution	74

## **Chapter 5 Barrier Design and Performance Evaluation**

5.1 Introduction	82
5.2 Type of lining system	84
5.3 Calculation of leachate quantity	86
5.4 The transmissivity of the leachate collection layer	86
5.5 The hydraulic conductivity, k	87
5.6 An example	88

## **Chapter 6 Conclusions and Suggestions for Further Work**

6.1 Hypothesis of the present investigation	90
6.2 Suggestions for further work	93

<b>Appendix A</b>	94
-------------------	----

<b>Appendix B</b>	97
-------------------	----

<b>References</b>	98
