A STUDY OF MALAYSIAN SCHOOL COUNSELOR RESILIENCE

HASLEE SHARIL LIM BIN ABDULLAH

A Thesis Submitted to the Faculty of Education
University of Malaya in Fulfillment of the Requirements
for the Degree of Doctor of Philosophy

2003

ABSTRAK

Satu Kajian Daya Ketahanan Kaunselor Sekolah Di Malaysia

Kementerian Pendidikan Malaysia telah melaksanakan skim perkhidmatan kaunseling sepenuh masa di sekolah-sekolah menengah sejak awal tahun 1996. Setelah lebih kurang empat tahun, didapati sebilangan kaunselor telah meletak jawatan dan sebilangan lagi telah diminta untuk meletak jawatan mereka atas sebab-sebab tertentu. Berdasarkan pemerhatian dan juga maklum balas terus daripada para kaunselor yang masih berkhidmat di sekolah-sekolah, terdapat banyak isu yang perlu ditangani untuk membendung keadaan ini. Namun begitu, adalah dipercayai bahawa tahap kesejahteraan psikologi para kaunselor adalah faktor penentu utama dalam menjayakan perkhidmatan kaunseling sepenuh masa di sekolah-sekolah. Kaunselor yang sejahtera dan berdaya tahan khususnya, berupaya memulihkan diri dengan cepat apabila menghadapi kesulitan dan kekecewaan. Mereka pantas mengembalikan kefungsiannya apabila mengalami tekanan dengan memuhasabkan diri dan mengaplikasikan kemahiran memujuk dan merawat diri. Fenomena inilah yang telah mencetuskan minat kajian ini untuk mencari jawapan kepada soalan-soalan berikut: (1) Sejauh manakah daya ketahanan diri para kaunselor sekolah? (2) Siapakah para kaunselor yang berdaya tahan? (3) Bagaimanakah profil ketahanan para kaunselor? (4) Adakah persekitaran sekolah mempengaruhi daya ketahanan kaunselor? (5) Adakah daya ketahanan kaunselor dipengaruhi oleh kelayakan akademik dan ikhtisas mereka? (6) Apakah prediktor-prediktor daya ketahanan umum para kaunselor? (7) Apakah korelasi di antara daya ketahanan kaunselor dengan efikasi sendiri dan *'burnout'* ?

Kajian ini telah dijalankan untuk mencari jawapan kepada tujuh soalan kajian utama dengan menggunakan *Resiliency Attitudes Scales*, *General Self-Efficacy Scale*, dan *Burnout Potential Inventory*. Kesemua instrumen kajian ini telah diterjemahkan ke dalam bahasa Melayu dan ditentusahkan dalam satu kajian awal sebelum digunakan dalam kajian ini. Bacaan Cronbach's alpha untuk ketiga-tiga instrumen adalah .84, .94, dan .81. Sementara bacaan Guttman Split-half pula adalah .85, .93, dan .84. Soal-selidik telah dihantar kepada 1,061 orang kaunselor sepenuh masa di seluruh Malaysia dan 615 (57.96%) orang telah mengembalikannya.

Pengiraan Indeks Dayatahan (*Resiliency Index*) menghasilkan min 71.94 dengan sisihan lazim 4.40. Daripada 615 subjek kajian, 414 orang (67.32%) didapati berdaya tahan dengan Indeks Dayatahan (ID) mereka 70 dan ke atas. Selebihnya, 201 orang (32.68%) didapati tidak berdaya tahan. Analisis lanjutan telah dilakukan untuk mengenal pasti kaunselor berdaya tahan berasaskan ras, jantina dan lokasi sekolah. Profil kaunselor yang berdaya tahan yang telah dikumpul dan disusun-atur adalah *Creativity*, *Morality*, *Initiative*, *Relationships*, *Independence*, *Humor*, dan *Insight*. Ketujuh-tujuh komponen daya ketahanan ini adalah berdasarkan teori daya ketahanan Wolin dan Wolin (1993). Persekitaran sekolah berdasarkan sekolah berasrama penuh dan harian; sekolah bandar dan luar bandar; sekolah lelaki, perempuan dan campuran; sekolah teknik, agama, China dan biasa; dan sekolah berprestasi akademik rendah, sederhana, dan tinggi didapati tidak membawa kesan yang signifikan terhadap daya ketahanan kaunselor. Analisis melalui ujian-*t* dan ANOVA menunjukkan bahawa tiada perbezaan daya ketahanan yang

signifikan dalam kelima-lima pengkategorian sekolah tersebut. Walau bagaimanapun, analisis yang sama terhadap kelayakan akademik dan ikhtisas kaunselor menunjukkan pengaruh yang signifikan ke atas daya ketahanan kaunselor. Keputusan *stepwise multiple regression* menunjukkan bahawa *Morality*, *Creativity*, *Initiative*, dan *Relationship* secara bersama menyumbang sebanyak 35.20% daripada *variance* keseluruhan daya ketahanan umum para kaunselor. Perhubungan keseluruhan juga didapati signifikan ($F_{4,610} = 82.70$, $p < .001$). *Morality* didapati adalah prediktor terbaik yang menyumbang sebanyak 24.70% *variance*, manakala *Relationship* (1.00% *variance*) pula, adalah prediktor yang terakhir yang termasuk ke dalam *prediction equation*. Akhir sekali, daya ketahanan para kaunselor didapati mempunyai korelasi sederhana dengan efikasi sendiri ($r = .57$, $p < .05$) dan berkorelasi sederhana secara negatif dengan 'burnout' ($r = -.42$, $p < .05$).

Berdasarkan dapatan kajian, implikasi teori dan praktikal daya ketahanan telah dibincangkan. Sesungguhnya, daya ketahanan adalah elemen penting dalam tugas seseorang kaunselor sekolah. Usaha mempertingkatkan daya ketahanan diri adalah sejajar dengan prinsip asas kaunseling. Namun begitu, adalah perlu bagi para kaunselor sendiri senantiasa mengawal selia tahap kesejahteraan fizikal dan mental dirinya. Kaunselor yang sejahtera dan berdaya tahan pasti lebih berupaya membantu kliennya mengatasi halangannya agar dapat berkembang ke tahap yang optimum.

ABSTRACT

The Ministry of Education in Malaysia implemented the full-time counseling scheme in secondary schools in early 1996. After about four years, it was observed that a sizeable number of counselors resigned from their post. There were also some who were asked to relinquish their post due to attitudinal problems. Based on observation as well as direct feedback from practicing counselors, there are far too many issues to be addressed to arrest the situation. Nevertheless, it is believed that the psychological make-up of the counselors themselves is the major determining factor in ensuring the success of the counseling service in schools. The resilient ones are able to bounce back quickly from any setbacks and disappointments. They recoil fast from pressure and regain their level of productivity through a self-reflective and self-soothing capacity. This has prompted the researcher's inquiry interests to seek answers to the following questions: 1. How resilient are Malaysian school counselors? 2. Who are the resilient counselors? 3. What is the resiliency profile of school counselors in Malaysia? 4. Does school environment affect their resilience? 5. Is their resilience influenced by their academic and professional qualifications? 6. What are the main predictors of counselors' general resilience? 7. Is resilience correlated significantly with self-efficacy and burnout?

The study was conducted to seek answers to these research questions using the Bahasa Melayu version of the Resiliency Attitudes Scale, the General Self-Efficacy Scale, and Burnout Potential Inventory. These instruments were translated and validated in a pilot study before being used in the study. The internal consistency of Cronbach's

alpha for the three instruments were .84, .94, and .81 respectively. Reliability analysis using Guttman Split-half procedure yielded readings of .85, .93 and .84. Questionnaires were sent to 1,061 full-time counselors throughout Malaysia, of which 615 (57.96%) responded.

The computation of the Resiliency Index (RI) yielded a mean of 71.94 with a standard deviation of 4.40. Out of 615 respondents, 414 (67.32%) of them were found to be resilient with a mean RI of 70 and above. The remaining 201 (32.68%) respondents were found to be non-resilient. Further analyses were done to identify resilient counselors according to their race, gender and school location. The resilient counselors were found to have a profile of Creativity, Morality, Initiative, Relationships, Independence, Humor, and Insight, which constitute resiliency according to Wolin and Wolin's (1993) theory of resilience. The school environment, in terms of boarding and day schools; rural and urban schools; boys', girls' and coeducational schools; technical, religious, Chinese and normal schools; and academically low, average and high performing schools, was found to have no significant effect on counselor resilience. This is concluded from *t*-test analyses and ANOVA which yielded no significant difference in counselor resilience in all the five school categorizations. On the other hand, *t*-test analyses and ANOVA showed that the counselors' academic and professional counseling qualifications have a significant influence on their resilience. The results of the stepwise multiple regression showed that Morality, Creativity, Initiative and Relationship together contributed 35.20% of the total variance of counselors' general resilience. And the overall relationship was also found to be

significant ($F_{4, 610} = 82.70, p < .001$). Morality was found to be the best predictor, which accounted for 24.70% of the variance, whereas Relationship which accounted for 1.00% of the variance, was the last predictor that entered the prediction equation. The subjects' resilience was found to be moderately correlated with their self-efficacy ($r = .57, p < .05$), and negatively correlated with their burnout score ($r = -.42, p < .05$). The results were interpreted and discussed based on Wolin and Wolin's (1993) theory as well as the literature reviewed.

Based on the findings, the theoretical and practical implications were discussed. Inevitably, resilience features prominently in the counselors' work with their clients. Promoting self-resilience is highly consonant with the basic principle of counseling. Nevertheless, the counselors themselves need to constantly monitor their own physical and mental wellbeing. Healthy and resilient counselors are definitely more capable of helping their clients to overcome obstacles that block their optimal personal development.

ACKNOWLEDGEMENTS

I would like to take this opportunity to express my immense gratitude and deep appreciation to my supervisor, Prof. Suradi, for his invaluable support, guidance and encouragement. My special thanks also go to my head of department, Prof. Zulkifli, who granted me the study leave and helped me a great deal in the initial conceptualization of the study as well as in data collection.

My research could not have been completed without the approval of the Educational Planning and Research Division, Ministry of Education, Malaysia, the permission of all the state education directors which facilitated my data collection, and the cooperation of the counselors who took time to respond to my questionnaire. Thank you very much.

The Education Faculty members of University of Malaya also contributed in many ways in making the completion of this research possible. Dr. Ananda, Dr. Kuldip, Prof. Seow, Dr. Saratha, Mr. Liew, your constructive comments, suggestions, help and support will always be remembered.

A special thank you also goes to Dr. Marilyn Susman, who has been my confidant since we met during her first visit to Malaysia in 1997. Though we could only communicate through emails most of the time, your support and encouragement enabled me to pull through many difficult times. I really can't thank you enough, Marilyn.

Puan Halijah, my former lecturer in Universiti Putra Malaysia, is another person to whom I wish to extend my deep appreciation. Thank you for being my listener despite your ill health. You were always there for me whenever I needed someone to talk with. Besides that, I owe it to you to have spotted my potentials as a counselor. You are the most wonderful mentor in grooming me continuously till this day. I really appreciate the relationship we have developed since my undergraduate days. My gratitude extends well beyond the expression of words. May Allah bless you, Puan Halijah.

In a very special way, I thank Zie, my beloved wife, who had to shoulder most of the responsibilities of taking good care of our children, Elia, Ezzati, Eliana, and Shah Iman. I know you had made enormous sacrifices to let me concentrate on my research. To my children, thank you for behaving well despite the reduced time I could afford to be with you. Thank you very very much for your understanding, support and patience throughout the past three years or so.

Last but not least, to all the rest of my family members, friends, and students, thank you for your encouragement and concern about my progress. Your blessings have given me strength, which bolstered my resilience to soldier on this bumpy road to success. Above all, I thank Allah, the almighty for giving me strength and enlightenment that helped me through this academic endeavor.

Thank you all!

Sharil.
