

**DESIGN AND EVALUATION OF A WEB-BASED CONSTRUCTIVIST  
LEARNING ENVIRONMENT FOR PRIMARY SCHOOL STUDENTS**

**ABTAR KAUR DARSHAN SINGH**

A thesis submitted to the Faculty of Education, University of Malaya, in fulfillment of the requirements for the degree of Doctor of Philosophy in Education

FEBRUARY 2001

To my parents, Darshan Singh and Joginder Kaur, and  
my brother, Prof. D. S. Ranjit Singh

## ACKNOWLEDGEMENTS

I wish to express my sincere appreciation and gratitude to a number of people who helped make this work a success.

My supervisor, Professor Dr. John Arul Phillips for his professional guidance, friendly disposition, care, concern and attention to details. Throughout the study, Prof. Phillips was approachable, understanding and available for appointments even at short notice.

My close friend, Kuldip, who spent many hours helping me refine my thoughts. During the past four years, our discussion over many cups of coffee helped make this journey less of an ordeal and more of a learning experience.

The principal of Taman Tun Dr. Ismail Primary School, Puan Noraini Sabdin, the Principal of Taman Tun Dr. Ismail Secondary School, Puan Khamisah Mohd Khamis, the Taman Tun Dr. Ismail Primary School library teacher, Puan Siti Zaleha and all students who took part in this study.

The Deans of the Faculty of Education, Prof. Datin Dr. Rahimah Haji Ahmad and later Prof. Dr. Khadijah Rohani Mohd Yunus, the Head of Educational Pedagogy and Psychology Department, Associate Prof. Dr. Zulkifli Abdul Manaf and the Director of the Multimedia Development Centre, Associate Prof. Dr. Mohd Sapiyan Baba for their understanding and encouragement.

My assistants, Zanariah, Shaw Guei and Khobir for putting in long hours in creating the template. Suhaila Mas Ayu for helping with the layout of the manuscript.

My friends and colleagues, Esther, Gladys and Ananda from the Faculty of Education, Bee Keong and Fizah from the Multimedia Development Center for their moral support and assistance.

My husband, Ranjit Singh and my four sons, Jagdish, Rajdish, Tejvinder and Gurtej for their patience and for being a constant source of strength and inspiration for me.

## ABSTRACT

The purpose of this study was to determine the effectiveness of a web-based constructivist learning environment (WebClen) on the enhancement of higher order thinking skills and content acquisition of 36 Year 4 high, mixed and low ability students. The study also examined the characteristics of cooperative and collaborative learning processes employed by the three groups of students. Finally, the study investigated the role of the teacher and also student perceptions towards learning in a web-based environment.

The study employed a one-group repeated measures design aimed at measuring the effects of web-based learning on thinking skills and acquisition of Geoscience content. Three tests were administered at the pre-treatment and post-treatment stages of the study. The treatment consisted of a four-week Geoscience program involving problem-solving tasks and activities focused on developing thinking skills and cooperative and collaborative learning processes. During this period, qualitative data were also collected through observations, opinionnaires and questionnaires.

The findings indicate that as a result of the treatment, there was a significant improvement in learners' higher order thinking skills and content acquisition while the improvement in students' information skills was not significant.

Secondly, the high, mixed and low ability groups responded differently to the various tasks and activities used in the study. Groups of high ability students benefitted from peer evaluation and online journal writing experiences. Low ability groups benefitted from online critical report writing and frequently asked questions. On the other hand, most of the tasks and activities did not appear to benefit the mixed ability groups.

Thirdly, it was found that the groups varied in the way they employed cooperative and collaborative learning processes. While high ability groups focussed on process related tasks (such as asking for opinions and feedback), low and mixed ability groups focussed on skill related tasks (such as keyboard skills).

Fourthly, the study uncovered the defining characteristics of a teacher's role within a technology-rich teaching and learning environment. It was thus found that the teacher plays a multi-faceted role in enhancing the content, thinking, linguistic, information-seeking and technological skills of learners in a constructivist learning atmosphere.

Finally, the study revealed that students perceived the web-based learning environment positively. This was evident in their comments on the flexibility to choose the learning activities, the variety and availability of information and self-paced learning.

The study draws several implications for the role of technology in teaching and learning, for the role of the teacher as a multi-skilled individual and the potential for creating a positive learning atmosphere within a constructivist paradigm.

## Rekabentuk dan Penilaian Satu Persekitaran Pembelajaran Konstruktivis Berasaskan Web Untuk Pelajar Sekolah Rendah

### ABSTRAK

Tujuan kajian ini ialah untuk menentukan keberkesanan satu persekitaran pembelajaran konstruktivis berasaskan Web terhadap peningkatan kemahiran berfikir dan penguasaan isi kandungan Geosains seramai 36 orang pelajar tahap tinggi, campur dan rendah dari sebuah sekolah rendah. Selain itu, kajian ini juga menilai ciri-ciri utama proses pembelajaran secara kerjasama dan kolaboratif yang digunakan oleh ketiga-tiga kumpulan pelajar ini. Akhir sekali, kajian ini melihat peranan guru dalam persekitaran yang menggunakan teknologi Internet serta persepsi pelajar terhadap pembelajaran berasaskan Web.

Kajian ini menggunakan rekabentuk *repeated measures* berasaskan sekumpulan pelajar yang bertujuan untuk menguji keberkesanan pembelajaran berasaskan Web terhadap kemahiran berfikir dan pemerolehan isi kandungan Geosains. Tiga ujian dikendalikan sebelum dan selepas kajian. Rawatan kajian terdiri daripada pendedahan kepada topik Geosains selama 4 minggu yang melibatkan aktiviti penyelesaian masalah, dan aktiviti yang meningkatkan kebolehan berfikir pelajar serta proses kerjasama dan kolaboratif dengan menggunakan Web sebagai tapak interaktif utama. Semasa waktu berkenaan, data kualitatif juga dikumpul melalui proses pemerhatian, tinjauan pendapat dan soal selidik.

Dapatan kajian menunjukkan bahawa pertamanya, berlaku satu peningkatan signifikan dalam kemahiran berfikir tahap tinggi pelajar serta penguasaan isi kandungan, manakala tiada peningkatan signifikan dalam kemahiran maklumat. Kedua, pelajar tahap tinggi, sederhana dan rendah memberi respons yang berbeza

terhadap aktiviti-aktiviti dalam kajian ini. Pelajar tahap tinggi bermanfaat dari aktiviti penilaian rakan sekumpulan dan penulisan jurnal *online*. Pelajar tahap rendah pula bermanfaat daripada penulisan laporan *online* secara kritikal dan aktiviti *frequently asked questions* (FAQ). Manakala kumpulan campur tidak mendapat manfaat yang ketara dari mana-mana aktiviti *online*. Ketiga, didapati, kumpulan tahap tinggi, kumpulan pelajar bercampur serta kumpulan pelajar tahap rendah menggunakan ciri-ciri kerjasama dan kolaboratif yang berbeza dalam proses pembelajaran mereka. Kumpulan tahap tinggi berfokus kepada tugas-tugas yang berteraskan proses (seperti meminta pandangan serta maklum balas rakan) manakala kumpulan bercampur dan tahap rendah berfokus kepada tugasan berkaitan kemahiran (seperti kemahiran menggunakan papan kekunci). Keempat, kajian ini mencirikan secara terperinci peranan guru dalam persekitaran yang kaya dengan penggunaan teknologi. Didapati guru bermain enam peranan utama sebagai fasilitator iaitu: pakar isi kandungan, pakar teknologi, pakar dwibahasa, pendorong proses pembelajaran, penyokong pembelajaran kerjasama dan kolaboratif dan pengawas kemajuan pelajar. Akhir sekali, kajian ini mendapati bahawa pelajar-pelajar memberi respons yang positif terhadap persekitaran ini. Ini terbukti daripada komen-komen pelajar tentang terdapatnya fleksibiliti dalam memilih aktiviti pembelajaran, terdapatnya kepelbagaian maklumat serta pembelajaran yang mengikut kelajuan diri (*self-paced*).

Kajian ini merangkakan beberapa implikasi peranan teknologi dalam proses pengajaran pembelajaran, peranan guru sebagai individu yang mempunyai kemahiran yang berbeza dan potensi mewujudkan satu persekitaran berparadigma konstruktivis yang positif.
