

KNOWLEDGE DESIGN IN RULE-BASED SYSTEM ARCHITECTURE FOR C TUTORIAL

V THAVACHELVI A/P VELAUTHAM WGC020017

DISSERTATION SUBMITTED IN FULFILMENT OF THE REQUIREMENTS FOR THE DEGREE OF MASTER OF SOFTWARE ENGINEERING

FACULTY OF COMPUTER SCIENCE AND INFORMATION TECHNOLOGY UNIVERSITY OF MALAYA KUALA LUMPUR

FEBRUARY 2005

Abstract

CTutorial4u is a standalone system developed in Visual Basic 6.0 which is able to provide guidance to the students who are pursuing C programming subject in their higher learning institutes. It is designed based on rule-based system architecture in order to provide a flexible knowledge base foundation within C programming. The knowledge base structure is essential to the successful execution of rules underlying the basic modules or processes involved in the system.

CTutorial4u's functionalities divided into two categories that are 'User Module' and 'Admin Module'. User Module has 'Lecture notes', 'Tutorial session' and 'Quiz session'. The Admin Module has 'User management' and 'Question management'. Lecture notes contains lecture notes in power point format, tutorial session contains knowledge based tutorials to teach main topics in C programming interactively and the quiz session provide interactive quiz to the students.

The knowledge design in rule based system architecture actually run based on some standard rules set in the working memory. The rules will remain the same for different runs. CTutorial4u is not only an exercise to the students but actually improves basic understanding in C programming and as a tool to test their knowledge in that field. At the same time, it will judge student's ability and efficiency of answering different set of quizzes with various concepts in programming language. The system is intended to be used by Faculty of Science Computer and Information Technology (FCSIT), University Malava students where it will be installed FCSIT's laboratories.

Acknowledgements

Firstly, I would like to thank the Almighty GOD for the strength and courage He has given me throughout the completion of this project. This project is dedicated to my beloved parents and siblings who inspired and encouraged me to carry out the project successfully.

I would like take this opportunity to express my utmost gratitude to my project supervisor Puan Nazean Jomhari whose guidance, encouragement and advice helped to bring the best out of me. She is a very dedicated lecturer and always willing to share her opinions to make the project a worthy one. Timely feedback, new ideas and suggestions from her made the system to be more interactive. Not forgetting my internal examiner Pn. Norjihan where all her comments were the inspiration to reproduce a good final documentation. Thank you very much Pn. Norjihan.

At the same time, I would like to thank all the students from all the local universities and private colleges who courteous and sportive enough to help me throughout the requirement collection session where they rendered their valuable time to answer the questionnaire and evaluate the system without any hesitation. Special thanks to all the faculty members of FCSIT, University Malaya who helped in the procedures and planning for the dissertation submission and tutors who helped in the testing phase. Last but not least, special thanks go to my bosses at my workplace who were very understanding throughout the completion of the project.

Table of Contentsiv
List of Figuresin
List of Tablesxi
Chapter 1 Introduction
1.1 Project Definition
1.2 Project Motivation
1.3 Project Objectives
1.4 Project Scope
1.5 Project Limitations
1.6 Target Audience
1.7 Project Expected outcome
1.8 Project Development Methodology
1.9 Project Schedule
Chapter 2 Literature Review
2.1 Introduction to Literature Review
2.2 Introduction to Artificial Intelligence
2.2.1 Expert System or Knowledge System1
2.2.2 The structure of an expert system1
2.2.3 What is Rule-Based System?
2.2.3.1 Rule-Based System Architecture1
2.2.3.2 Inference Mechanisms or Techniques
2.3 Introduction to C Programming1
2.3.1 Basic Structure and Data Types1
2.3.2 Topics in C Programming
2.3.2.1 Arithmetic
2.3.2.1.1 Application of rules to teach arithmetic
2.3.2.2 Control Structures

2.3.2.2.1 Application of rules to teach control structures	
2.3.2.3 Functions	
2.3.2.3.1 Application of rules to teach function31	
2.3.2.4 Arrays and Sorts	
2.3.2.4.1 Application of rules to teach arrays	
2.3.2.5 Pointers	
2.3.2.5.1 Application of rules to teach pointers	
2.3.2.6 File Processing	
2.3.2.6.1 Application of rules to teach file processing	
2.3.3 Benefits of Designing in Rule-Based System Architecture56	
2.3.4 Analysis and Synthesis56	
2.4 Surveys on existing system57	
2.4.1 MYCIN	
2.4.2 The Rule-Based Expert System Using an Interactive QA Sequence59	
2.4.3 INTELLITUTOR II64	
2.4.4 The ANDES Physics Tutoring System67	
2.4.5 Softsyst69	
2.4.6 Carnegie Learning Cognitive Tutor Integrated Math I, II, III70	
2.5 CTutorial4u Vs Existing Systems71	
2.6 Software and Technologies73	
2.6.1 Visual Basic	
2.6.2 Microsoft Access	
•	
Chapter 3 System Analysis76	
3.1 System Development Methodology76	
3.1.1 Waterfall Model77	
3.1.2 Linear Model of Experts System Development	
3.1.3 Evolutionary Development Model	
3.1.4 Analysis and Synthesis	
3.2 Requirement Analysis87	
3.2.1 How to elucidate user requirement87	
3.2.1.1 Discussion with the project supervisor	
3.2.1.2 Survey about C among students using Questionnaires	
3.2.1.3 Surf through the Internet and research on reading materials	

3.2.2 Functional requirements	91
3.2.2.1 Administration session	92
3.2.2.2 Lecture notes session	93
3.2.2.3 Tutorial session	93
3.2.2.4 Quiz session	97
3.2.3 Non-Functional Requirements	98
3.3 Development Environments	100
3.3.1 Hardware Requirements	100
3.3.2 Software Requirements	100
Chapter 4 System Design	102
4.1 Overview of Ctutorial4u Architecture	
4.2 Process design	103
4.2.1 System structure chart	103
4.2.2 Flow chart diagram	104
4.3 UML Diagram	106
4.3.1 Class diagram	107
4.3.2 CTutorial4u Use Case Diagram	110
4.3.3 Sequence Diagram	111
4.4 Suggested Database Design	116
4.5 Interface Design	118
4.5.1 Sample User Interfaces	121
Chapter 5 System Implementation	126
5.1 Development Environment	126
5.1.1 Hardware Configurations	126
5.1.2 Software Configurations	126
5.2 Project Development	127
5.2.1 Data Preparation	127
5.2.1.1 Still Images and animated graphics	128
5.2.1.2 Database preparation	128
5.2.1.3 Input form design	128
5.2.1.4 User interface design	129
5.2.2 Coding	

5.2.2.1 Database connection
5.2.2.2 Authenticate member
5.2.2.3 Process with Database
5.2.3 System Integration
Chapter 6 System Testing
6.1 Introduction to System Testing
6.2 Testing Phase
6.2.1 Unit Testing
6.2.2 Module Testing
6.2.3 Overall system Testing
6.2.4 Test Case
6.2.4.1 User Module Test Case142
6.2.4.2 Admin Module Test Case
6.3 Compliance of the system to its scope and requirements145
Chapter 7 System Evaluation
7.1 Problems Encountered and Solutions
7.2 System Strengths
7.2.1 User Friendliness
7.2.2 Password Protected System – Security Features
7.2.3 Reliable System with Effective Error Handling
7.2.4 Validation on Input Data
7.2.5 Interactivity
7.2.6 Simplicity & Consistency
7.3 System Limitations
7.3.1 Poor Accessibility Feature
7.3.2 Lack of information quality
7.3.3 Quiz session only consists of multiple choices questions152
7.4 Future Enhancements
7.4.1 Web- based system153
7.4.2 Improve Information Quality153
7.4.3 Quiz session to be more interactive
7.5 Comparison between before and after using CTutorial4u
