

Chapter 8 Conclusion

Finally, the system has been completed on time within the timeframe given. The system was developed step-by step from identifying the scope, literature review, requirement collection and analysis, system design, implementation, testing and evaluation of the system. Throughout the development process there were no major obstacles faced since everyone involved in the system has given full-cooperation to make this project as a success.

The development of CTutorial4u was incremental, so the system was tested during the coding phase. Unit testing, sub-system testing and integration testing was done and problems were rectified immediately earlier before the modules were combined to form the real system. User acceptance test were done once the system is fully integrated to make sure the system is ready to be delivered.

The system has its own strengths and weakness. The limitation listed actually to be further enhanced by other students. As such, the system can be used as a reference or groundwork for future research by adding on more functionality.

As a nutshell, the system comply all the initial scope and requirements and provides other value-added features which reveal it as a more reliable, user friendly, interactive and efficient.
