## ABSTRACT

The purpose of this study was to investigate, identify and validate information technology competencies required of administrative support staff working in networked organizations in Malaysia. The respondents in this study were administrative support staff with a job title classification of stenographer, secretary, executive secretary, executive assistant, and administrative assistant employed in medium to large, networked organizations from the service sector in Klang Valley, Malaysia. Data were gathered through the Information Technology Competency Questionnaire (ITCQ) initially developed through a review of available literature and validated by a 14-member panel of experts using the 3-round Modified Delphi Technique approach. 545 administrative support staff from 250 medium to large service networked organizations were surveyed with a response rate of 62%.

Results of the study found that the tasks most often performed and IT competencies required were related to the traditional function of administrative support staff. These tasks were associated with the competency categories of word processing, communications, manage files and records, basic computer maintenance, security and troubleshooting, perform financial functions and monitor activities and events. There was an indication, however, that administrative support staff were beginning to carry out tasks associated with the use of newer and complex technologies. These tasks included Internet research, presentation and desktop publishing. The tasks associated with developing a Web page

was never performed by respondents in this study. However, all the tasks and related IT competencies were perceived as important in the work of administrative support staff.

Respondents were proficient in performing tasks related to word processing and communications, but rated their competency as marginal for the tasks of presentation, desktop publishing and develop Web page. Areas that needed additional capability in IT was determined through mean weighted discrepancy scores. The study indicated that respondents required additional capabilities in areas related to word processing, create Web page, presentation and manage database.

Significant differences found in task performance, task importance and competency across level of education, age group, job title, years in current position, related work experience and years of computer use can be used as factors in designing, developing and upgrading programs that meet the needs of administrative support staff as a "one size fits all" training is not effective. The findings justify the need for continuous professional development and lifelong learning for administrative support staff who are employed in an ever-changing workplace.

Significant positive relationships between perceptions of task importance and task performance for all competency categories indicate that all the tasks and related IT competencies are perceived as important to administrative support staff. The level of performance for some tasks and related IT competencies may be lower but does not indicate less importance. The results of this study further strengthens the case for including all the tasks and related IT competencies from this study in a curriculum for students wishing to embark on an office management career. It is also recommended that the findings of significant differences in task performance and ability across several demographic variables be used in developing national occupational skill standards for administrative support jobs.

## **Pembangunan Kecekapan Teknologi Maklumat untuk Staf Sokongan Pentadbiran di dalam Organisasi Berangkaian di Malaysia**

### **ABSTRAK**

Kajian ini bertujuan untuk mengkajisasat, mengenalpasti dan mengesahkan kecekapan teknologi maklumat yang diperlukan oleh staf sokongan pentadbiran yang bekerja di dalam organisasi berangkaian di Malaysia. Responden kajian terdiri daripada staf sokongan pentadbiran yang berjawatan jurutrengkas, setiausaha, setiausaha eksekutif, penolong eksekutif dan pembantu pentadbiran yang bekerja di dalam organisasi berangkaian sederhana dan besar dari sektor perkhidmatan di Lembah Klang, Malaysia. Data dikumpulkan melalui "Information Technology Competency Questionnaire" yang dibina daripada tinjauan literatur dan disahkan oleh satu panel 14 orang pakar menerusi kaedah 3 pusingan Delphi yang diubahsuai. Sebanyak 545 soalselidik telah diedarkan kepada staf sokongan pentadbiran di 250 organisasi berangkaian sederhana dan besar dengan kadar respon sebanyak 62%.

Kajian mendapati bahawa tugas yang kerap dilakukan dan kecekapan teknologi maklumat yang diperlukan berkaitan dengan fungsi tradisi staf sokongan pentadbiran. Tugas-tugas ini berkaitan dengan kategori pemerosesan perkataan, komunikasi, pengurusan fail dan rekod, penyelenggaraan asas komputer dan keselamatan, menjalankan fungsi kewangan, dan memantau acara dan aktiviti. Kajian menunjukkan bahawa staf sokongan pentadbiran telah mula melakukan kerja yang melibatkan teknologi baru dan kompleks seperti penyelidikan Internet, persembahan dan penerbitan desktop. Manakala tugas yang tidak pernah dilakukan ialah mencipta laman Web. Bagaimanapun responden berpendapat bahawa semua tugas adalah penting.

Dapatan kajian menunjukkan bahawa responden “Mahir” di dalam pemprosesan perkataan dan komunikasi tetapi menilai kecekapan mereka sebagai “Marginal” untuk kategori penerbitan desktop dan mencipta laman Web. Latihan tambahan yang diperlukan telah dipastikan melalui kaedah purata skor selisih dengan pemberat (Mean Weighted Discrepancy Score). Hasil kajian mendapati responden perlukan latihan tambahan di dalam pemprosesan perkataan, penciptaan laman Web, persembahan dan pengurusan pengkalan data.

Kajian juga mendapati perbezaan yang signifikan dalam perlakuan tugas, kepentingan tugas dan kecekapan antara peringkat pendidikan, kumpulan umur, jawatan, pengalaman di dalam jawatan semasa, pengalaman kerja yang berkaitan dan tempoh penggunaan komputer. Dapatan ini boleh digunakan untuk merekabentuk, membina dan mempertingkatkan program yang dapat memenuhi keperluan yang berbeza di kalangan staf sokongan pentadbiran. Hasil kajian ini mengukuhkan lagi keperluan untuk pembangunan profesional dan pembelajaran berterusan di kalangan staf sokongan pentadbiran yang bertugas di dalam tempat kerja yang sentiasa berubah.

Kajian mendapati bahawa terdapat hubungan positif yang signifikan antara kepentingan tugas dengan perlakuan tugas untuk semua kategori kecekapan. Ini menandakan bahawa kesemua tugas dan kecekapan IT berkaitan adalah dianggap **mustahak** kepada staf sokongan pentadbiran. Peringkat perlakuan untuk beberapa tugas mungkin rendah tetapi tidak menandakan kurang **mustahak**. Hasil kajian ini mengukuhkan lagi bahawa kesemua tugas dan kecekapan IT daripada kajian ini mestilah dimuatkan di dalam kurikulum untuk pelajar-pelajar yang berhajat menceburi kerjaya pengurusan pejabat. Adalah dicadangkan agar dapatan signifikan dalam perlakuan tugas dan kecekapan antara peringkat pendidikan dan jawatan digunakan untuk membangunkan Standard Kemahiran Pekerjaan Kebangsaan bagi jawatan staf sokongan pentadbiran.

## ACKNOWLEDGEMENTS

The completion of this study would not have been possible if not for the valuable contribution and encouragement of many individuals. Above all, I thank the All Mighty for giving me the strength and commitment to continue in this endeavor.

I am most grateful to my supervisor, Associate Professor Dr. Saedah Hj. Siraj who strongly believed in this academic undertaking and provided the unwavering support and guidance in the research that was carried out. My sincere appreciation and gratitude to my co-supervisor, Associate Professor Dr. Mogana Dhamotharan, whose positive support and brilliant suggestions came just at the right time to keep the work moving forward.

To my friends and colleagues, who knew when and when not to ask regarding my progress and whose support came whenever needed, I am thankful. I am blessed to have my parents, Haji Mohd. Nadzar Shariff and Hajah Zaleha Jamil, who are a source of inspiration and who were responsible for my choosing University of Malaya as a place of study. To my children, Fatimatuzzahrah, Siti Maimunah, and Khairuddin, may this piece of work inspire you to achieve greater heights in life. Last but not least, to my husband Associate Professor Haji Jamaluddin Che Sab without whose encouragement, patience and support this endeavor would not have been possible.
