Title	Page			
Abstract	ii			
Abstrak	iv			
Acknowledgements	vi			
List of figures	ix			
List of tables	xi			
List of symbols and abbreviations	xii			
Chapter 1	Introduction	1		
	1.1	Research hypotheses	2	
	1.2	Research objectives	3	
Chapter 2	Literature review			
	2.1	Photodynamic therapy		
		2.1.1	Introduction	5
		2.1.2	Mechanisms of action	6
		2.1.3	Advantages of PDT	7
		2.1.4	Disadvantages of PDT	9
	2.2	Photosensitiser		
		2.2.1	Characteristics of an ideal photosensitiser	10
		2.2.2	Tetrapyrrolic photosensitisers	11
		2.2.3	Non-tetrapyrrolic photosensitisers	26
		2.2.4	Photosensitisers from marine algae	27
	2.3	Algae		29
		2.3.1	Classification of algae	30
		2.3.2	Biodiversity of marine algae in Malaysia	31
		2.3.3	Uses of seaweeds	31
		2.3.4	Anti-cancer compounds from marine algae	32
	2.4	Sourcing photosensitisers from marine algae		36
Chapter 3	Materials and methods			
	3.1	Materials		38
	3.2	Instrumentation		38
	3.3	Sample collection and processing		39
		3.3.1	Preparation of herbarium specimens	41
		3.3.2	Preparation of extracts	41
	3.4	Bioassay		41
		3.4.1	Cell culture	42
		3.4.2	MTT bioassay for photo-cytotoxicity	42
		3.4.3	Photo-cytotoxicity	43
	3.5	Isolation and purification of chemical compounds		44
		3.5.1	Methylation	45
		3.5.2	Liquid-liquid partition	46
		3.5.3	Open column silica gel chromatography	46
		3.5.4	Thin layer chromatography (TLC)	46

	3.5.5	Preparative thin layer chromatography (PTLC)	47
	3.5.6	Analytical high performance liquid chromatography (HPLC)	47
	3.5.7	semi-preparative HPLC	48
	3.6	Criteria of the selection of samples	49
	3.7	Naming samples	49
Chapter 4		Results	
	4.1	Seaweeds collected and yields of methanolic extracts	50
	4.2	Photo-cytotoxicity of methanolic extracts	56
	4.3	Isolation of phototoxic compounds from <i>Turbinaria conoides</i> extract (Tur)	58
	4.3.1	Photo-cytotoxicity of fractions from partitioned chloroform extract of <i>Turbinaria conoides</i>	60
	4.3.2	Identification of the active compounds from <i>Turbinaria conoides</i> extract	60
	4.4	Isolation of photo-cytotoxic compounds from methylated extract of <i>Turbinaria conoides</i> (Tur-me)	67
	4.4.1	Photo-cytotoxicity of fractions collected from methylated extract of <i>Turbinaria conoides</i>	69
	4.4.2	Identification of active compounds from methylated extract of <i>Turbinaria conoides</i>	69
	4.5	Isolation of photo-cytotoxic compounds from the extract of <i>Cladophora patentiramea</i>	76
	4.5.1	Photo-cytotoxicity of fractions from the extract of <i>Cladophora patentiramea</i>	78
	4.5.2	Identification of active principles from <i>Cladophora patentiramea</i>	79
	4.6	Other semi pure fractions	90
	4.7	Photo-cytotoxicity of pure compounds	90
Chapter 5		Discussion	
	5.1	The selection of seaweeds for chemical isolation	92
	5.2	Compounds isolated from <i>Turbinaria conoides</i> and <i>Cladophora patentiramea</i>	92
	5.3	Chromophores of photo-cytotoxic compounds isolated	93
	5.4	Mechanistic rationale for the compounds isolated	94
	5.5	Strategies employed in the study	
	5.5.1	Methylation of crude extracts	98
	5.5.2	Bioassay-guided isolation	98
	5.6	Areas for further studies	99
Chapter 6		Conclusions	101
Bibliography			103
