## ACKNOWLEDGEMENT

This thesis has received the support and encouragement from many individuals and in particular, the support of University Malaya, which provided financial assistance throughout the period of study. Without their support, it is not possible for me to complete this programme in time.

All through this period, I am grateful, and wish to thank Associate Professor Dr. Idris Jajri, my supervisor, who academically and administratively helped me through the period and without whose guidance this exercise would not have materialised.

I also have to thank all professors and lecturers of the Faculty of Economics and Administration, University of Malaya for making the M.Ec. programme a stimulating episode in my intellectual journey especially Professor Jomo K. S., Professor Mohamed Ariff, Associate Professor Mustafa Hasan, Associate Professor Dr. Murthi Semudram and Professor Stephen Chee.

I must not forget my former primary and secondary teachers who thought and guided me to achieve my goals, especially Mr. N. T. Nadarajah, Mr. Murugappan, late Mr. Joseph Ambrose, Mr. Harbhajan Singh, Mrs. Chow, Mrs. Lee Pang, Mr. Chang, Mrs. Achee, Mr. Rajamanikam, Pn. Sofiah and Fatimah.

The preliminaries for this study were mooted while I was with S. K. Brothers Realty, and to my former colleagues there, I wish to record my appreciation to them for having given me a better insight into housing economics. I have also benefited immensely from many stimulating discussions with my colleagues especially Charlie Chan, Alex Gomez, Nicholaus, Govinda, Rajan and Rashid.

I would like to show my appreciation to the various library staffs which I have visited. I must not forget Puan Fatimah and Puan Fauziah who were responsible for the typing of this thesis.

Nevertheless, I would like to thank my M.Ec. Coursemates, for making the programme a memorable academic endeavor.

I would like to give special thanks to my friend, Hari Ramalu, who helped me in various stages of the study in various occasions.

Most of all, I would like to express my sincere gratitude to my family and parents, Arumugam Kannan and Krishnamal Manikam, for the understanding, patience, concern and guidance shown throughout the duration of this study. I really appreciate their sacrifices which have thought me the meaning of education and life.

Lastly, I would like to express my utmost appreciation to my wife, Vicky, for her constant encouragement, tolerance and understanding and for the trouble to edit the whole thesis which I find difficult to convey in a few words.

Thank you.

## ABSTRACT

Housing is an interesting subject in which everyone has an interest. It is interesting because it provides shelter for the owner. Without shelter life is incomplete for a human being. Housing is used as a rod of measurement to determine living standards throughout the world. Homeless society means lower standard of living.

Therefore it is very important for the authorities to make sure that the supply of dwellings satisfies the demand for dwellings. In reality, the demand always outweighs the supply of dwellings, thus further aggravating the housing problems. In realizing the above situation, the author decided to analyse the demand and supply of dwellings in the Klang Valley.

This exercise is an attempt to study some major aspects of the housing problems in the Klang Valley on the theoretical and practical levels. The thesis shows how the market mechanism operates to set the price and quantity of dwellings. Moreover, it

explains the factors which determine the demand and supply of dwellings in the Klang Valley. On top of that, it deals with the condominium growth trends and prospects and the overall housing market scenario in the Klang Valley.

Finally it is hoped that it will help in giving a clearer understanding of the way the housing market functions. It recommends a greater co-operation between private and public sectors in order to provide more dwellings for the people and thus improve their living standards.
