ACKNOWLEDGEMENTS

I would like to extend my deepest gratitude to all the persons below for their support and assistance. I would like to thank my supervisor, Dr. Yusof for his invaluable guidance and advice. I deeply appreciate his patience and generosity for sharing his vast experience in completing this study.

Special thanks to my parents, my brothers and sisters in-law for their support and encouragement. They are always there when I needed them the most.

Thanks are also due to my Factory Manager, Mr. Vincent Ling and my Department Head, Ms SC Koh for their understanding and support in work throughout my pursuit for MBA.

Lastly, I would like to dedicate this thesis to my late brother, Chan Chew Hooi, who had always being my inspiration for self-improvement.

ABSTRACTS

The objective of this study is to gauge the organisation viability and performance by applying the Soft System Methodology, to draw a framework for a planned organisational change in a polywrap packaging material manufacturer.

The selection of samples for observation and secondary data was based on census (for organisation level and group level) and probability sampling (for individual level). The stratified sampling method was used to select 30% (70 individuals) from 3 levels of employees in the organisation (which consists of 234 employees).

The 5 points Likert Scale was used to measure the magnitude of the variables being evaluated. The results show that the organisation is viable only in self-actuation but fail to survive and performance in other areas.

The actions recommended to overcome the critical success factors are divided into four intervention strategies, namely, Human process interventions, Human resource interventions, Techno-structural interventions and Strategic orientation interventions. These recommendations are meant to shift the company to a better competitive advantage. As such, a roll out plan has been developed to navigate the change process in this organisation.
