ACKNOWLEDGMENTS

I wish to express my sincere gratitude to my supervisor, Assoc. Prof. Dr. Bhaskar Sen Gupta for his guidance and helpful comments, suggestions, criticisms and encouragement. I would like to thank Prof. Mohd. Ali Hashim for his invaluable advice.

I thank En. Osman, En. Jasmi and Dr. Ramakanth for their help in this Project.

Thanks to my coursemates, Annie who was always there; Nesa for her support.

Lastly, I would like to thank my parents, brother Viswa, Goki, Uma and friends for their moral support.

ABSTRACT

In this study recovery of heavy metals (Ni and Cr) and water from wastewater have been explored using the reverse osmosis process. The relationship between permeate flow rate and trans-membrane pressure drop (TMP) for different feed concentrations were derived. The effect of TMP on concentration of heavy metals in the permeate was also studied. Recovery of heavy metals and high quality process water were two main applications studied here using pilot plant membrane unit. A feasibility of reclaiming high quality process water from the effluent was carried out by a comparative study between RO membrane process and deionization process for small and medium scale electroplating industries. A modification of surface force pore-flow (SFPP) model was also included as a part of this study. Experimental data for the modelling work were gathered by using aqueous sodium chloride solutions. The verification of the SFPP model for the aqueous NiSO_4 , NiCl_2 and CrCl_3 solutions was not included in the scope of this work.

ABSTRAK

Kajian ini meliputi pemerolehan semula logam-logam berat (Ni dan Cr) dan air dari air buangan dengan menggunakan proses reverse osmosis. Perhubungan di antara kadar aliran hasil penapisan dan perbezaan tekanan membran (TMP) bagi kepekatan larutan yang berlainan telah diperolehi. Kesan TMP ini terhadap kepekatan logam-logam berat di dalam hasil penapisan juga dikaji. Pemerolehan semula logam-logam berat dan air proses berkualiti tinggi adalah dua penggunaan utama unit membran (pilot plant) yang dikaji. Kajian perbandingan kos penghasilan air proses berkualiti tinggi dari effluen oleh proses membran dan proses penyahionan dilakukan bagi tujuan penggunaan di industri penyaduran kecil dan sederhana. Selain daripada itu, kajian ini meliputi pengubahsuaian model 'surface force pore-flow' (SFPPF). Data eksperimen dikumpul dengan menggunakan larutan akuas natrium klorida. Kajian model SFPPF ini tidak merangkumi penggunaan larutan akuas NiSO_4 , NiCl_2 dan CrCl_3 .

LIST OF TABLES	xi
LIST OF FIGURES	xiii
APPENDIX	xv
Chapter 1: Introduction	1
1.1 Significance of Research	1
1.2 Industrial Wastewater and Heavy Metal Pollution	2
1.3 Various Techniques of Treatment Technology	4
1.3.1 Chemical Precipitation	4
1.3.2 Ion Exchange	5
1.3.3 Evaporation	6
1.4 Membrane Separation	6
1.4.1 Reverse osmosis	9
1.5 Comparison of Different Separation Technologies	11

1.6 Objective and Scope of Research	13
Chapter 2 : Literature Review	15
2.1 Nickel	15
2.1.1 Uses of Nickel	16
2.1.2 Nickel in Vegetation	16
2.1.3 Distribution and Behaviour of Nickel in the Aquatic Environment	19
2.1.3.1 Nickel in Streams and Rivers	19
2.1.3.2 Nickel in Lakes	21
2.1.3.3 Nickel in Estuaries	22
2.1.3.4 Nickel in Wastewater	22
2.1.4 Toxicity of Nickel	23
2.1.4.1 Effect of Nickel on Marine Organisms	23
2.1.4.2 Effect of Nickel on Freshwater Organisms	26
2.1.5 The Effect of Nickel on Human Health	28
2.1.6 Recommended Environmental Quality Standards (EQS)	31
2.2 Chromium	33
2.2.1 Chromium in Vegetation	35

2.2.2 Distribution and Behaviour of Cr in Aquatic Environment	36
2.2.2.1 Chromium in Streams and Rivers	36
2.2.2.2 Chromium in Wastewater	38
2.2.3 Toxicity of Chromium	38
2.2.3.1 Effect of Chromium on Marine Organisms	38
2.2.3.2 Effect of Chromium on Freshwater Organisms	42
2.2.4 The Effect of Chromium on Human Health	46
2.2.5 Recommended Environmental Quality Standards (EQS)	49
 Chapter 3 : Materials and Methods	 51
3.1 Membrane Separation	51
3.1.1 Chemicals	51
3.1.2 Preparation of Metal Solutions	51
3.1.3 Membrane Unit	52
3.1.4 Reverse Osmosis Membrane Module	55
3.2 Metal Analysis	56
3.2.1 Chemicals	56

3.2.2 Inductively Coupled Plasma	57
3.2.3 Flame Photometer	59
Chapter 4 : Results and Discussions	62
4.1 Separation of Nickel (II) Sulfate	62
4.1.1 NiSO ₄ : Trans-membrane Pressure Drop and Permeate Flow Rate	62
4.1.2 NiSO ₄ : Trans-membrane Pressure Drop and Ni in Permeate	66
4.1.3 NiSO ₄ : Transmembrane Pressure Drop and Ni in Concentrate	69
4.1.4 NiSO ₄ : Flow Rate and Ni Concentration in Permeate	72
4.2 Separation of Nickel (II) Chloride	75
4.2.1 NiCl ₂ : Trans-membrane Pressure Drop and Permeate Flow Rate	75
4.2.2 NiCl ₂ : Trans-membrane Pressure Drop and Ni in Permeate	78
4.2.3 NiCl ₂ : Trans-membrane Pressure Drop and Ni in Concentrate	81

4.2.4 NiCl ₂ : Flow Rate and Ni Concentration in Permeate	83
4.3 Separation of Chromium (III) Chloride	86
4.3.1 CrCl ₃ : Transmembrane Pressure Drop and Permeate Flow Rate	86
4.3.2 CrCl ₃ : Trans-membrane Pressure Drop and Cr in Permeate	89
4.3.3 CrCl ₃ : Trans-membrane Pressure Drop and Cr in Concentrate	92
4.3.4 CrCl ₃ : Flow Rate and Cr Concentration in Permeate	95
4.4 Conclusion	97
