The ASM modeling of brain

APPENDIX B: ASM Search Algorithm

Starting from a specified pose, ASMSEARCH, searches an image for instances of the specified model. Upon search completion, the final model pose is returned, along with a vector of shape parameters, which describe the models shape.

```
% [Fpose,b] =
ASMSearch(image,start_pose,modelname,search_control,search_
props)
%
% inputs:
%     image           - MATLAB image to be searched
%     start_pose      - starting pose for the model
%     modelname       - name of ASM model to use in the search
%     search_control  - optional search parameters to
modify search
%                           control behaviour
%     search_props    - optional search parameters to
modify search
%                           behaviour
%
% outputs:
%     Fpose   - final pose, once the search has finished
%     b       - vector of shape parameters for located
shape instance
%
% example:
%
imname = 'E:\bin\Toolkit\Examples\Images\12_1.tiff';
im = ASMIImread(imname);

modelname = 'E:\bin\Toolkit\Examples\heart.asm';
asm = ASMLoad(modelname);

%
pose.centre = [370 230];
pose.angle = 0.0;
pose.scale = 1.0;

%
[fpose, b] = ASMSearch(image, spose, asm);

%
fpts = ASMShape(asm, b, fpose);

imagesc(image); colormap(gray); hold on;
```

% ASMPLOT(asm, fpts, 'r');

APPENDIX E: Comparison Between Access and SQL Server.

There are general Access 2000 characteristics:

Object	Maximum sizes/numbers
Database size	1 Gb
Number of characters in an object name	64
Number of characters in a password	14
Number of characters in a user name or group name	20
Number of concurrent users	255
Number of characters in a table name	64
Number of characters in a field name	64
Number of fields in a table	255
Number of characters in a Text field	255
Number of characters in a Memo field	65,535 / 1 Gb

There are general SQL Server 97/2000 characteristics:

Object	Maximum sizes/numbers
Batch size	65,535 * Network Packet Size
Bytes per short string column	8,000
Bytes per text, ntext,or image column	2 GB-2
Bytes per index	900
Bytes per foreign key	900
Bytes per primary key	900
Bytes per row	8,060
Bytes in source text of a stored procedure	Lesser of batch size or 250 MB
Clustered indexes per table	1
Columns per index	16
Columns per foreign key	16
Columns per primary key	16
Columns per base table	1,024
Columns per SELECT statement	4,096
Columns per INSERT statement	1,024
Connections per client	Maximum value of configured connections
Database size	1,048,516 TB
Databases per instance of SQL Server	32,767
Filegroups per database	256
Files per database	32,767
File size (data)	32 TB
Identifier length (in characters)	128
Locks per connection	Max. locks per server
Nested stored procedure levels	32
Nested subqueries	32
Nested trigger levels	32

Nonclustered indexes per table	249
Objects in a database	2,147,483,6474
Parameters per stored procedure	1,024
REFERENCES per table	253
Rows per table	Limited by available storage
Tables per database	Limited by number of objects in a database
Tables per SELECT statement	256
Triggers per table	Limited by number of objects in a database
UNIQUE indexes or constraints per table	249 nonclustered and 1 clustered

Shape Model Data (.SMD) for modeled MR heart images is shown in pages 78 and 79.

This file keeps track the location of images, model file, parts file and points file.

```
// Shape Model Data
model_name: heart1
model_dir: E:\bin\Toolkit\Examples\
parts_file: heart1
image_dir: E:\bin\Toolkit\Examples\Images\
points_dir: E:\bin\Toolkit\Examples\Points\
image_format: matlab
// Alternatives: radial, wolfson,sunras,gif,tif,bmp,matlab
// Details of points : images
training_set:
{
12_1.pts : 12_1.tiff
12_2.pts : 12_2.tiff
12_3.pts : 12_3.tiff
12_5.pts : 12_5.tiff
12_7.pts : 12_7.tiff
12_9.pts : 12_9.tiff
12_14.pts : 12_14.tiff
12_16.pts : 12_16.tiff
12_17.pts : 12_17.tiff
12_24.pts : 12_24.tiff
}

// For shape model building :
min_modes: 1
max_modes: -1
amount_des: 0.95

// Alternatives: mean/max point-to-point/point-to-tangent/point-to-polyline distance/square_distance
measured_parts_file: -

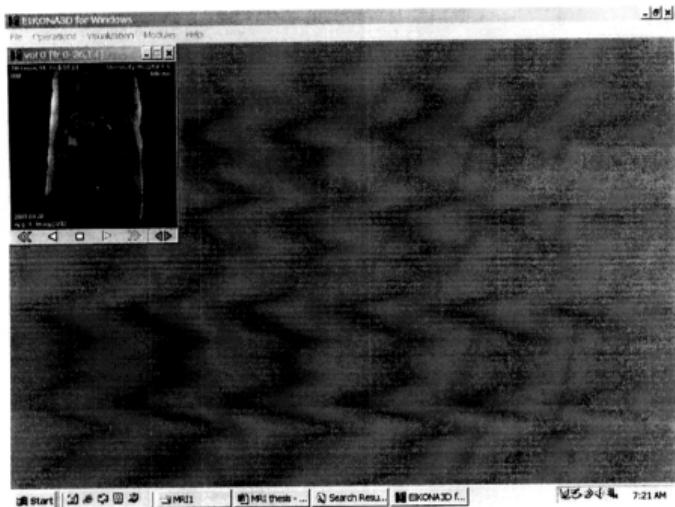

// Define alignment of mean shape:
align_control:
{
origin_at_cog: 1
scale_method: scale_mean
// Alternatives : none,scale_mean,scale_all
min_move: 0.01
```

```
max_its: 40
}

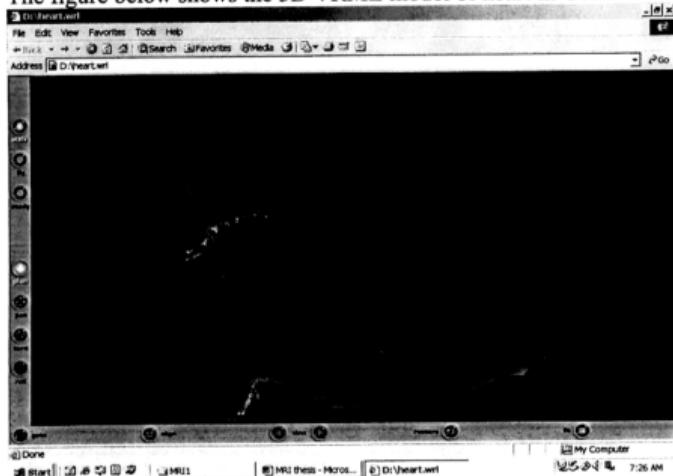

// For grey model building :
g_in_len: 3
g_out_len: 3
g_width: 1
sample_int: 1
min_layer: 0
max_layer: 2
use_grad: 1
norm_grey: 1
```

APPENDIX G: Additional Features

The figure shows 3D heart model in EIKONA3D for windows

The figure below shows the 3D VRML model of heart in Cortona 3.1

APPENDIX H: Software and hardware used

Software:

Windows 2000 professional edition

Matlab 5.3

ASM Toolkit

Microsoft Access 2000 Database

Eikona 3D

Cortona for Internet Explorer (VRML plug in)

Hardware:

Siemens Magnetom Vision MRI whole body scanner

Compaq Presario 1200 Laptop

Glossary

CT - Acronym for Computed Tomography. A technique that produces 2D or 3D internal body scans using thin X-Ray beam radiation.

The scans are cross-sectional images.

ER Model – Entity Relationship Model. This model describes data as entities, relationships, and attributes.

GUI - Acronym for Graphical User Interface. A user friendly computer program designed for new users .

OO Data Model: Object Oriented Data Model. This concept is an extension from Object Oriented Programming. Data in the database are classified under different object identity, class hierarchies and inheritance.

MRI - Acronym for Magnetic Resonance Imaging. 2D or 3D images of the body structures are generated in a strong magnetic field. These images can be taken in coronal, sagittal or axial image planes.

fMRI - Acronym for Functional Magnetic Resonance Imaging. 2D or 3D images of the body structures are generated in a strong magnetic field. These images are studied based on the functions of the body structures imaged.

Relational model – A data model that represents a database as a collection of tables, where each table can be stored as a separate file.

ROI – Acronym for Region Of Interest. A region that contains the objects modeled in an image.

Segmentation - The process of slicing an image into mutually exclusive and meaningful segments of interest.
