Abstract	ii
Abstrak	iii
Contents	v
List of Tables	viii
List of Figures	x
Chapter 1.0: Introduction	1
1.1 Detergent	1
1.2 History of Detergent	2
1.3 Components in Detergent Formulations and Their Functions	4
1.3.1 Surfactant	4
1.3.2 Builders	25
1.3.3 Inorganic Builders	26
1.3.4 Bleaching Agents	26
1.3.5 Auxiliary Agents (Organic Builders)	27
1.4 Hard Surface Cleaners	31
1.5 Sodium Lauryl Sulfate	42
1.6 Titrimetric Method of Analysis of Anionic Surfactant	47
1.6.1 Two-Phase Titration of Ionic Surfactants of opposite charge	47
1.6.2 Other Variants of Two-Phase Titration	51

1.7	Spectrophotometric Methods for Analysis of Anionic Surfactants	53
1.7.1	Gas Chromatography	54
1.7.2	High Performance Liquid Chromatography	56
1.7.3	NMR Spectroscopy	58
1.7.4	Infra Red Spectroscopy	60
1.7.5	Potentiometric Titration with Surfactants of Opposite Charge Using a Surfactant-Sensitive Electrode	61
1.8	Objectives of This Project	62
Chapter 2.0: Experimental		63
2.1	Reagents and Instruments	63
2.2	Preparation of 0.1 M Standard Acetous Perchloric Acid Solution	65
2.3	Standardisation of 0.1 M Standard Acetous Perchloric Acid Solution	65
2.4	Preparation of 6% Mercuric Acetate Solution	66
2.5	Preparation of Azure A Solution	66
2.6	Preparation of Methyl Yellow Solution	66
2.7	Determination of the Purity of Benzethonium Chloride	67
2.8	Preparation of 0.005 M Benzethonium Chloride Solution	67
2.9	Preparation of 0.050 M Benzethonium Chloride Solution	67
2.10	Determination of the Purity of Sodium Lauryl Sulfate	68
2.11	Preparation of 50 µg/ml Standard Sodium Lauryl Sulfate (SLS) Solution	68
2.12	Preparation of a Series of Standard SLS Solution for Spectrophotometric Analysis	69

2.13	Preparation of SLS samples from Commercial Detergents	69
2.14	Spectrophotometric Analysis of the Samples	70
Chapter 3.0: Results and Discussion		72
3.1	Detergent Samples	72
3.2	Two-Phase Titrimetric Method	73
3.3	Spectrophotometric Method	89
Chapter 4.0: Conclusion		101
References		102

## List of Tables

	<u>Pages</u>
Table 1: Commonly emulsified materials versus HLB of surfactants empirically determined to best emulsify them	16
Table 2: Example of how surfactant blends are used to obtain most stable emulsion	16
Table 3: Volume of acetous perchloric acid for the blank titration	74
Table 4: Weight of potassium hydrogen phthalate	74
Table 5: Volume of acetous perchloric acid for the titration of potassium hydrogen phthalate	74
Table 6: Volume of acetous perchloric acid for the blank titration	76
Table 7: Weight of benzethonium chloride used	76
Table 8: Volume of acetous perchloric acid for the titration of benzethonium chloride	76
Table 9: Volume of benzethonium chloride for the titration of SLS for sample 1	79
Table 10: Volume of benzethonium chloride for the titration of SLS for sample 2	80
Table 11: Volume of benzethonium chloride for the titration of SLS for sample 3	81

Table 12:	Determination of sodium lauryl sulfate in some detergent products by titrimetric method	86
Table 13:	Determination of sodium lauryl sulfate in some detergent products by titrimetric method	87
Table 14:	Average value of % sodium lauryl sulfate in the 14 samples determined by titrimetric method	88
Table 15:	Absorbance versus concentration of sodium lauryl sulfate standard	93
Table 16:	Determination of sodium lauryl sulfate in some detergent products by spectrophotometric method	97
Table 17:	Determination of sodium lauryl sulfate in some detergent products by spectrophotometric method	98
Table 18:	Average value of % sodium lauryl sulfate in the 14 samples determined by spectrophotometric method	99
Table 19:	Linear regression analysis of calibration graph	100

## List of Figure

	<u>Pages</u>
Figure 1: Typical surfactant molecule showing the hydrophile and hydrophobe portions of the molecule. Extracted from [21]	5
Figure 2: Surfactant alignment in an air-water-soil system Extracted from [21]	6
Figure 3: Contact angles for non-wetting, partial spreading and wetting Extracted from [21]	8
Figure 4: Soil removal mechanism Extracted from [21]	11
Figure 5: “Roll-up” mechanism for removal of liquid oil soils Extracted from [21]	12
Figure 6: Oil-in-water and water-in-oil emulsion types and typical appearances	14
Figure 7: (a) is sodium lauryl sulfate with a single hydrophobic tail, which is considerably less bulky than (b) the branched hydrophobic tail. Extracted from [21]	44
Figure 8: <sup>1</sup> H-NMR spectrum of an anionic surfactant in D <sub>2</sub> O Extracted from [22]	59
Figure 9: IR spectrum of alkyl sulfate Extracted from [22]	60

Figure 10:	UV-visible spectrum of sodium lauryl sulfate	94
Figure 11a:	Absorbance versus concentration of sodium lauryl sulfate standard	95
Figure 11b:	Absorbance versus concentration of sodium lauryl sulfate standard	96
