ACKNOWLEDGEMENT

First, I would like to express my gratitude to my project supervisor, Dr. Sharan Kaur for all the help, encouragement, knowledge and guidance she has provided me throughout this entire research project. My gratitude goes also to Professor Abessi, Professor Abdul Razak and Dr. Tengku Dean for helping me with the statistical review.

Secondly, I would like to express millions of thanks to my beloved parents for being so understanding and caring to me and definitely without their encouragement, sacrifices and sincere prayers I could never have achieved the completion of my MBA and this thesis. Apart from them, I would like to express my sincere gratitude to my lovely brother, Mojtaba, for being such a reliable friend throughout the years despite tremendous time constraint.

Thirdly, I also wish to thank my fellow MBA students, particularly Ng Cing Yee for her companionship, help and support in completing my study, and also for being wonderful friend and teammate.

Last but not least, a note of thanks is also extended to all respondents and research assistants who have contributed to the success of the research survey and this thesis would not be possible without their participation. However, to those whose name I may have left out unintentionally, I do thank you for all your help and presence in my life.
