

**UNDERSTANDING OF SOCIO-ECOLOGICAL  
BARRIERS TO PRIMARY SCHOOL CHILDREN'S  
WALKING TO AND FROM SCHOOL IN TEHRAN**

**ROYA SHOKOOHI**

**THESIS SUBMITTED IN FULFILMENT  
OF THE REQUIREMENTS  
FOR THE DEGREE OF DOCTOR OF PHILOSOPHY**

**FACULTY OF BUILT ENVIRONMENT  
UNIVERSITY OF MALAYA  
KUALA LUMPUR**

**2012**

## **Acknowledgements**

I would like to express my sincere thanks to my supervisors, Associate Professor Dr. Sr. Noor Rosly Hanif and Associate Professor Dr. Melasutra Md Dali. They have been wonderful teachers and counsellors for the past three and half years. They freely shared their own knowledge and wisdom and provided help and support whenever I turned to them. My experience at University of Malaya was enriched because of the opportunity to work with them and I look forward to continuing this collaboration in the future.

Many thanks go to the faculty of the Built Environment and staff in the departments of Estate Management and Architecture at the University of Malaya for their assistance during my time at UM. I would like to thank Prof. Michael Gregory Lloyd who asked profound questions to develop a deeper understanding of children's status and their travel pattern; also, he introduced me to Dr. Susan Zeedyk who has done great research relating to children and safety. I would also like to thank Ar. Lim Take Bane and my dear friend Jeanette Moosavi who edited the English for my papers and reports.

I can never adequately thank the children, their parents and the staff of the schools involved in my study for their participation in my research. Without their precious gift of time, this research would have not been completed. I would like to thank Mr Mahmoud Dolat Abady in the Department of Transportation and Traffic in Tehran for giving me access to useful information about children walking to school and traffic safety as well as introducing me to a key informant in the Educational Traffic Park in Tehran (Pounak).

I do not have adequate words to thank my family and friends for their encouragement and love. They were the best support system to help me through the

dissertation and through life. Special thanks go to my parents who inspired in me the courage to try and the strength to achieve.

I would not have been able to continue in the Ph.D. programme yet for the great support from my husband Youshij and my daughter Roshan. Without their patience and love I would not have reached this stage. To them my debt is the greatest.

| Example of parents’ questionnaire (English version).....                                                                                                  | 299        |
| <b>APPENDIX B:</b>                                                                                                                                        |            |
| Example of parents’ questionnaire (Persian version).....                                                                                                  | 307        |

|                                                                 |     |
|-----------------------------------------------------------------|-----|
| <b>APPENDIX C:</b>                                              |     |
| Example of children’s “Writing Activity” (English version)..... | 316 |
| <b>APPENDIX D:</b>                                              |     |
| Example of children’s “Writing Activity” (Persian version)..... | 317 |
| <b>APPENDIX E:</b>                                              |     |
| Example of children’s “Spider chart” (English version).....     | 318 |
| <b>APPENDIX F:</b>                                              |     |
| Example of children’s “Spider chart” (Persian version).....     | 319 |
| <b>APPENDIX G:</b>                                              |     |
| Example of instrument for urban design measurements.....        | 320 |

## List of figures

|                                                                                                                           |     |
|---------------------------------------------------------------------------------------------------------------------------|-----|
| Figure 2.1: Built environment factors which correlates with walking to and from school .....                              | 43  |
| Figure 2.2: Personal safety factors which correlates with walking to and from school..                                    | 45  |
| Figure 2.3: Traffic safety factors which correlates with walking to and from school....                                   | 49  |
| Figure 2.4: Socio-demographic factors which correlates with walking to and from school.....                               | 54  |
| Figure 2.5: Culture norms and parental attitude which correlates with walking to and from school.....                     | 59  |
| Figure 3.1: Main aspects of the educational system in Iran.....                                                           | 81  |
| Figure 4.1: Diagram of the conceptual framework of barriers for elementary-aged children walking to and from school ..... | 89  |
| Figure 4.2: Triangulating Design Mixed Methods Research Design.....                                                       | 102 |
| Figure 4.3 :Two initial multinomial logisti regression models .....                                                       | 120 |
| Figure 5.1 :Grade distribution of children involved in the study.....                                                     | 129 |
| Figure 5.2: Income groups' distribution of parents involved in the study.....                                             | 130 |
| Figure 5.3: Income groups' distribution of parents' educational level involved in this study.....                         | 131 |
| Figure 5.4: Income groups' distribution of number of children in a household .....                                        | 131 |
| Figure 5.5: Income groups' distribution of number of children under 5 years old in a household .....                      | 132 |
| Figure 5.6: Income groups' distribution of number of children under 5 years old in a household.....                       | 132 |
| Figure 5.7: A child's current travel mode to and from school regardless of the different income groups.....               | 134 |
| Figure 5.8: A child's current travel mode to school regarding child's gender .....                                        | 135 |
| Figure 5.9: A child's current travel mode to school regarding child's age.....                                            | 136 |
| Figure 5.10: Typical adult escort when walking to school .....                                                            | 137 |
| Figure 5.11: A child's current method of transport to school across different socio-economic areas .....                  | 137 |
| Figure 5.12: A child's current method of transport from school across different socio-economic areas.....                 | 138 |
| Figure 5.13: The preferred method of transport for a child to go to and from school ..                                    | 138 |
| Figure 5.14: The preferred method of transport for a child to go to and from school ..                                    | 139 |

|                                                                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Figure 5.15: The preferred method of transport for a child to go to school.....                                                                                 | 140 |
| Figure 5.16: The preferred method of transport for a child back home.....                                                                                       | 140 |
| Figure 5.17: The distribution of the study population based on parental perceived distance between home and school .....                                        | 141 |
| Figure 5.18: The cross tabulation between parental perceived distance between home and school and different socio-economic status areas.....                    | 141 |
| Figure 5.19: The cross tabulation between parental perceived distance between home and different travel modes to school .....                                   | 142 |
| Figure 5.20: The cross tabulation between parental perceived distance between home and different travel modes from school.....                                  | 143 |
| Figure 5.21: street with pavements on both sides .....                                                                                                          | 149 |
| Figure 5.22: street with pavements on one side .....                                                                                                            | 149 |
| Figure 5.23: street with no pavements at all .....                                                                                                              | 150 |
| Figure 5.24: first floor windows facing the street on left and fences of the courtyards on right.....                                                           | 152 |
| Figure 5.25: the commercial floors in one of the neighbourhoods in Tehran.....                                                                                  | 153 |
| Figure 5.26: in front of the main gate of one the schools with two traffic lanes .....                                                                          | 154 |
| Figure 5.27: a street around one the schools with speed bumps and students who are walking .....                                                                | 154 |
| Figure 5.28: street trees in one of the neighbourhoods from high-income areas.....                                                                              | 155 |
| Figure 5.29: a small park in a neighbourhood from low-income area.....                                                                                          | 155 |
| Figure 6.1: The first floor windows are covered with curtains.....                                                                                              | 176 |
| Figure 6.2: The first floor windows are not clear glass, so they cannot be seen through.....                                                                    | 176 |
| Figure7.1:The moderation model of the analytical framework shows how traffic safety and neighbourhood safety impact on children walking to and from school..... | 189 |
| Figure 7.2: Stands on pavements to prevent motor cycles being ridden on pavements                                                                               | 250 |
| Figure 7.3: and Figure 7. 4: construction sites in middle income (left side) and low-income areas. ....                                                         | 252 |
| Figure 7.5: On-street parking in middle income areas.....                                                                                                       | 254 |
| Figure 7.6: Wide streets in high-income areas with narrow pavements .....                                                                                       | 254 |
| Figure 7.7: Narrow streets in low-income areas without pavements.....                                                                                           | 254 |
| Figure 7.8: Wide streets with more than more than 4 lanes of traffic in middle income areas.....                                                                | 255 |
| Figure 8.1: The modified conceptual framework based on results of study.....                                                                                    | 268 |

## List of tables

|                                                                                                                                                                                                                                  |     |

| Table 6.7: Comparison between basic model and expanded model to see the magnitude of impact of non-urban form variables on children’s transportation modes back home after adding built environment variables to the models..... | 181 |
| Table 7.1: Hypothesis testing: The influence of traffic safety and neighbourhood safety on walking to school .....                                                                                                               | 191 |
| Table 7.2: Hypothesis testing: The influence of traffic safety and neighbourhood safety on walking from school.....                                                                                                              | 191 |

|                                                                                                                                                                                                 |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Table 7.3: Hypothesis testing: The influence of traffic safety and neighbourhood safety factors that prevent children to walk to and from school autonomously vary across different areas ..... | 192 |
| Table 7.4: Summary of indexed independent variable and Cronbach's alpha.....                                                                                                                    | 193 |
| Table 7.5: Association between non-urban form factors on parental decisions about travel modes of children to school after entering indexes .....                                               | 203 |
| Table 7.6: Association between non-urban form factors on parental decisions about travel modes of children back home after entering indexes .....                                               | 206 |
| Table 7.7: Relationship between traffic safety and neighbourhood safety with the likelihood of children walking to school .....                                                                 | 209 |
| Table 7.8: Relationship between traffic safety and neighbourhood safety with likelihood of children walking back home.....                                                                      | 213 |
| Table 7.9: Influence of built environment factors on predicting the probability of children walking to school.....                                                                              | 218 |
| Table 7.10: Influence of built environment factors on predicting the probability of children walking to school.....                                                                             | 220 |
| Table 7.11: The effects of built environment factors on neighbourhood safety factors.                                                                                                           | 223 |
| Table 7.12: The effects of built environment factors on traffic safety factors.....                                                                                                             | 225 |
| Table 7.13: Regression with interaction variables to establish the effect of TSI and NSI factors on the probability of children's walking to school.....                                        | 230 |
| Table 7.14: Regression with interaction variables to establish the effect of TSI and NSI factors on the probability of children's walking back home.....                                        | 232 |
| Table 7.15: ANOVA test shows the initial difference between barriers across income groups. ....                                                                                                 | 233 |
| Table 7.16: Scheffe test, provide multiple comparison across areas .....                                                                                                                        | 234 |
| Table 7.17: Barriers for children in their walking to school in high income areas.....                                                                                                          | 238 |
| Table 7.18: Barriers for children in their walking to school in middle income areas...                                                                                                          | 239 |
| Table 7.19: Barriers for children in their walking to school in low income areas.....                                                                                                           | 240 |
| Table 7.20: Barriers for children in their walking back home in high income areas....                                                                                                           | 242 |
| Table 7.21: Barriers for children in their walking back home in middle income areas                                                                                                             | 243 |
| Table 7.22: Barriers for children in their walking back home in low income areas.....                                                                                                           | 244 |

## List of maps

|                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------|-----|
| Map 3.1: Map of Iran and its location in Asia. ....                                                                                  | 63  |
| Map 3.2: Location of Tehran in Iran.....                                                                                             | 63  |
| Map 3.3: Administrative districts of Tehran, red lines show the boundaries between the districts and green lines show the areas..... | 64  |
| Map 3.4: Historical growth of Tehran.....                                                                                            | 66  |
| Map 3.5: North-South axis in Tehran .....                                                                                            | 68  |
| Map 3.6: Tehran has expanded along the West-East axis.....                                                                           | 70  |
| Map 3.7: Concentration of official and commercial activities in the central areas.....                                               | 71  |
| Map 3.8: Restricted traffic zone and Odd/Even area .....                                                                             | 76  |
| Map 3.9: Classification of districts in Tehran according to their socio-economic status.....                                         | 78  |
| Map 4.1: Different socio-economic status areas in Tehran, source: master plan of Tehran.....                                         | 96  |
| Map 4. 2: School catchment areas in Tehran .....                                                                                     | 97  |
| Map 5.1: The neighbourhood surrounding schools in district number 7 (red spots show the schools).....                                | 145 |
| Map 5. 2: Location of buildings in a plot.....                                                                                       | 152 |
