ABSTRACT ........................................................................................................... ii

ABSTRAK ........................................................................................................... iv

ACKNOWLEDGEMENTS .................................................................................... vi

LIST OF FIGURES ............................................................................................ xii

LIST OF TABLES ............................................................................................... xiv

ABBREVIATIONS ............................................................................................... xvi

1 INTRODUCTION ............................................................................................. 1

1.1 AIR POLLUTION ......................................................................................... 1

1.2 ORGANIC AIR POLLUTANTS .................................................................... 3

1.3 PARTICLES IN THE ATMOSPHERE .......................................................... 3

1.4 POLYCYCLIC AROMATIC HYDROCARBONS (PAHs) AND ALKANES ....... 4

1.4.1 Definitions, Sources, and Presence in the Atmosphere and Street Dusts ... 4

1.4.2 Transport Behavior in the Atmosphere ................................................... 7

1.4.3 Seasonal, Temporal, and Spatial Variations .......................................... 9

1.4.4 Atmospheric Reactions .......................................................................... 10

1.4.5 Biodegradation and Toxicology ............................................................. 12

1.5 SAMPLING AND SAMPLE PRETREATMENT ............................................ 13

1.5.1 Sampling and Sampling Artifacts .......................................................... 13

1.5.2 Sample Pretreatment (Extraction and Separation) .................................. 18

1.5.3 Quantification and Identification ............................................................ 26

1.5.4 Storage Conditions of Particulate Samples .......................................... 30
3.2  GENERAL CHARACTERISTICS OF AIRBORNE PARTICLES AND ROADSIDE SOIL PARTICLES.........................................................55

3.2.1  Total PM$_{10}$ Particles (TPM$_{10}$P) ..................................................55
3.2.2  Extractable Organic Matter from Airborne Particulate Samples..56
3.2.3  Extractable Organic Matter from Roadside Soil Particles..........58
3.2.4  Percentages of Identified Organics in TSEOM.................................60

3.3  SOURCES OF AIRBORNE PARTICULATE MATTER.................................61

3.3.1  Internal Combustion Engines.........................................................61
3.3.2  Plants..........................................................................................62
3.3.3  Street Dust as a Source and Sink.....................................................63

3.4  n-ALKANES.........................................................................................64

3.4.1  Diagnostic Parameters and Calculations.............................................64
3.4.1.1  Carbon Preference Index (CPI).........................................................64
3.4.1.2  Carbon Number Maximum (C$_{\text{max}}$)..............................................64
3.4.1.3  Plant Wax n-Alkanes.................................................................64

3.4.2  Sources of n-Alkanes......................................................................64
3.4.2.1  Petrogenic Sources.................................................................64
3.4.2.2  Biogenic Sources......................................................................66

3.4.3  n-Alkanes in Airborne Particles, Roadside Soil Particles, and Lubricating Oils.................................................................66
3.4.3.1  n-Alkanes in Airborne Particulate Samples.................................66
3.4.3.2  n-Alkanes in Roadside Soil Particles............................................71
3.4.3.3  n-Alkanes in Lubricating Oils......................................................74
3.4.3.4  Plant Wax n-Alkanes.................................................................75

3.4.3.5  Comparison of Airborne Particulate Samples and Roadside Soil Particles.................................................................76
3.5 UNRESOLVED COMPLEX MIXTURE (UCM)........................................77

3.5.1 UCM in Airborne Particulate Samples, Roadside Soil Particles, and Lubricating Oils.........................................................78

3.6 PETROLEUM MOLECULAR MARKERS.........................................83

3.6.1 n-Alkylcyclohexanes...............................................................83

3.6.2 Isoprenoid Hydrocarbons (Pristane and Phytane).....................85

3.6.2.1 Sources in Crude Petroleum and the Environment..............85

3.6.2.2 Pristane and Phytane in Airborne Particulate Samples, Roadside Soil Particles, and Lubricating Oils.........................85

3.6.2.3 Pristane to Phytane Ratio (Pr/Ph)........................................88

3.6.3 Pentacyclic Tritterpanes and Steranes...................................89

3.6.3.1 Sources, Formation, and Occurrence in Fossil Fuels and the Environment.................................................................89

3.6.3.2 Hopanes and Steranes as Petroleum Molecular Markers..........................................................91

3.6.3.3 Hopanes and Steranes in Environmental Samples..............91

3.6.3.4 Geochemical Diagnostic Parameters and Interpretations........97

3.6.3.4.1 Ratio A.................................................................100

3.6.3.4.2 Ratio B.................................................................101

3.6.3.4.3 Ratio C.................................................................101

3.6.3.4.4 Ratio D.................................................................101

3.6.3.4.5 Ratio E.................................................................102

3.6.3.4.6 Ratio F.................................................................102

3.6.3.4.7 βα-Moretanes......................................................103

3.6.3.4.8 Other Parameters..................................................103
3.7 PYROGENIC MOLECULAR MARKERS (POLYCYCLIC AROMATIC HYDROCARBONS (PAHs)) .................................................. 105

3.7.1 Formation and Sources ............................................. 105

3.7.2 Physico-Chemical Modifications of PAHs during Transport and Sampling ............................................. 106

3.7.3 PAHs in Airborne Particulate Samples, Roadside Soil Particles, and Lubricating Oils ............................................. 107

3.7.3.1 PAHs in Airborne Particulate Samples ....................... 107

3.7.3.2 PAHs in Roadside Soil Particles ............................ 115

3.7.3.3 PAHs in Lubricating Oils ........................................ 120

3.7.3.4 Comparison of Airborne Particulate Samples and Roadside Soil Particles ............................................. 121

4 CONCLUSION .................................................................. 122

REFERENCES .................................................................... 126

ABBREVIATIONS

ANTH  Anthracene
ANTN  Anthanthrene
BaA   Benz[a]anthracene
BaP   Benzo[a]pyrene
BbF   Benzo[b]fluoranthene
BeP   Benzo[e]pyrene
BgP   Benzo[g,h,i]perylene
BkF   Benzo[b]fluoranthene
BR    Bukit Rengit
CH    Cheras
CHR   Chrysene
C_{max} Carbon number maximum
COR   Coronene
CPI   Carbon preference index
dBahA Dibenzo[a,h]Anthracene
DW    Dang Wangi
FLO   Fresh lubricating oil
FLT   Fluoranthene
g     Gram
GC    Gas chromatography
GC-FID Gas chromatography-flame ionization detector
GCMS  Gas chromatography-mass spectrometry
GCMSMS Gas chromatography-mass spectrometry-mass spectrometry
h     Hour
hi-vol High-volume
HPLC  High performance liquid chromatography
I.D.  Internal Diameter
IP    Indeno[1,2,3-cd]pyrene
JA    Jalan Ampang
JT    Jalan Travers
KE    Kepong
