## CHAPTER 1: INTRODUCTION, AIM AND OBJECTIVES OF STUDY

1.1. Introduction 2
1.2. Aim of Study 6
1.3. Objectives of this Study 6

## CHAPTER 2: LITERATURE REVIEW

2.1. Restoration Of Access Cavities Through Crowns In Endodontically Treated Teeth 8

2.1.1. Coronal microleakage of restored endodontically treated access Cavities 8

2.1.2. Endodontic access openings through existing crowns 9

2.1.3. Burs for preparing access cavities through existing crowns 10

2.1.4. Coronal Repair Restorations 11

2.1.4.1. Repair of access cavities through coronal restorations 12

2.1.4.2. The advantages of restoring the endodontic access cavities through an existing crown 13

2.1.4.3. The disadvantages of restoring the endodontic access cavities through an existing crown 13

2.1.4.4. Coronal Restorative Materials 14

2.2. Dental Porcelain 17
2.2.1. Definitions.  
2.2.2. Historical Perspective of Porcelain.  
2.2.3. Alloys for Porcelain Fused to Metal  
  2.2.3.1. Base Metal Alloys  
2.3. Resin-Based Composites  
  2.3.1. Introduction  
  2.3.2. Definition of Dental Composite  
  2.3.3. Composition of Dental Composite  
    2.3.3.1. Organic Phase  
    2.3.3.2. Inorganic Fillers  
    2.3.3.3. Coupling Agents  
  2.3.4. Classification of Resin-Based Composite  
  2.3.5. Problems With Composite Resins  
    2.3.5.1. Polymerization Shrinkage  
    2.3.5.2. Coefficient of Thermal Expansion  
    2.3.5.3. Water Sorption and Solubility  
    2.3.5.4. Modulus of Elasticity  
  2.3.6. Packable Composite  
  2.3.7. Flowable Composite  
2.4. Resin Modified Glass Ionomer Cements (RMGICs)  
2.5. Bonding Agents (Adhesive System)  
  2.5.1. Definitions  
  2.5.2. General aspects of dentin bonding system  
  2.5.3. Composition of Bonding System  
    2.5.3.1. Etchants  
    2.5.3.2. Primers
2.5.3.3. Adhesives

2.6. Microleakage

2.6.1. Factors Contributing to Microleakage

2.6.1.1. Interfacial space

2.6.1.2. Physical Properties of Restorative Materials

2.6.1.2.1. Solubility And Water Sorption

2.6.1.2.2. Coefficient of Thermal Expansion

2.6.1.3. Restorative Technique

2.6.1.4. Effect of Thermocycling

2.6.1.5. Effect of Mechanical Load Cycling

2.6.2. Methods of Demonstrating Microleakage

2.6.2.1. Direct Visualization

2.6.2.2. Dyes

2.6.2.3. Radioactive Isotopes

2.6.2.4. Bacteria

2.6.2.5. Scanning Electron Microscopy

2.6.2.6. Air Pressure

2.6.2.7. Artificial Caries

2.6.2.8. Neutron Activation Analysis

2.6.2.9. Electrical Conductivity

2.6.2.10. Fluid Flow Technique

CHAPTER 3: Materials and Methods

3.1. Materials Used In The Study

3.2. Methodology

3.2.1. Steps of Samples Fabrication

3.2.1.1. Wax Preparation
3.2.1.2. Spruing
3.2.1.3. Investing
3.2.1.4. Burnout
3.2.1.5. Casting
3.2.1.6. Finishing and Preparation of the Sample to receive porcelain
  3.2.1.6.1. Removing the sprue (de-spruing)
  3.2.1.6.2. Fitting the samples
  3.2.1.6.3. Recontouring the sprue area
3.2.1.7. Metal Oxidation
3.2.1.8. Porcelain Buildup
  3.2.1.8.1. Opaque Application
  3.2.1.8.2. Body And Enamel Porcelain Applications
3.2.1.9. Treatment of the inner surfaces of the PFM access openings
3.2.2. Surface Roughness test
3.2.3. Construction of Standardized Epoxy Mould with a centre cavity
3.2.4. Sample Groupings
3.2.5. Samples Filling
  3.2.5.1. Group A
  3.2.5.2. Group B
3.2.6. Water storage, Thermocycling and Dye Application
3.2.7. Sectioning
3.2.8. Measuring of Dye Penetration Depth
3.2.9. Statistic Analysis

CHAPTER 4: RESULTS

4.1. Mean Dye Penetration from Coronal Microleakage
  4.1.1. Coronal microleakage in restored endodontic access openings
    (Mean Dye Penetration according to Restorative Technique, Water
Storage and Thermocycling): Mean Dye Penetration.

4.1.2. The Effect of Restorative Technique, Water Storage and Thermocycling on Coronal Microleakage: Mean Dye Penetration.

4.1.3. The Effect of Water Storage and Thermocycling on Coronal Microleakage: Mean Dye Penetration.

4.1.5. The Effect of Water Storage on Coronal Microleakage without Thermocycling: Mean Dye Penetration.

4.2. Maximum Dye Penetration from Coronal Microleakage

4.2.1. Coronal Microleakage in Restored Endodontic Access Openings (Maximum Dye Penetration according to Restorative Technique, Water Storage and Thermocycling)

4.2.2. The Effect of Restorative Technique, Water Storage and Thermocycling on Coronal Microleakage: Maximum Dye Penetration.

4.2.3. The Effect of Restorative Technique on Coronal Microleakage: Maximum Dye Penetration.

4.2.4. The Effect of Water Storage on Coronal Microleakage: Maximum Dye Penetration.

4.2.5. The Effect of Thermocycling on Coronal Microleakage: Maximum Dye Penetration.

4.2.7. The Effect of Water Storage on Coronal Microleakage without Thermocycling: Maximum Dye Penetration.

4.3. Comparison between Mean and Maximum Dye Penetration.

CHAPTER 5: DISCUSSION

5.1. Materials and Methods

5.1.1. Specimens

5.1.1.1. The thickness of the specimens of this in-vitro study

5.1.1.2. Specimens fabrications
5.1.2. Restorative Materials

5.2. Specimens Preparation

5.2.1. Access Cavities of PFM Crowns

5.2.2. The surface treatment of the inner walls of the access cavities PFM

5.2.3. The fixation of the access cavities on to filled cavity-epoxy resin mould

5.2.4. Technique of Restorative

5.3. Specimens Evaluation

5.3.1. Water Storage and Thermocycling

5.3.2. Dye Application

5.3.3. Sectioning and Assessment

5.4. Results

5.4.1. General Results

5.4.2. Comparison of Results

5.4.2.1. The Effect of Restorative Technique on Coronal Microleakage

5.4.2.2. The Effect of Water Storage on Coronal Microleakage

5.4.2.3. The Effect of Thermocycling on Coronal Microleakage

CHAPTER 6: CONCLUSIONS AND CLINICAL RELEVANCE AND RECOMMENDATIONS FOR FURTHER WORK

6.1. Conclusions

6.2. Clinical Relevance

6.3. Recommendations for further work
