CHAPTER ONE: INTRODUCTION	1
CHAPTER TWO: OBJECTIVES OF THE STUDY	5
2.1. Aim of the study	6
2.2. Objectives of the study	6
CHAPTER THREE: REVIEW OF LITERATURE	7
3.1. Root canal therapy	8
3.1.1. Introduction	8
3.1.2. Phases of root canal therapy	8
3.1.3. Rationale of root canal therapy	9
3.2. Preparation of the root canal system	11
3.2.1. Introduction	11
3.2.2. Techniques for root canal preparation	12
3.2.2.1. Standardized technique	13
3.2.2.2. Step-back technique	13
3.2.2.3. Crown-down techniques	14
3.2.2.4. Balanced force technique	14
3.2.2.5. Automated root canal preparation	15
3.2.2.6. Sonic and ultrasonic preparation	16
3.2.2.7. Other methods	17
3.2.3. Preparation of oval canals	17
3.3. Obturation of the canal system	20
3.3.1. Introduction	20

3.4. Materials for root canal obturation	21
3.4.1. Introduction	21
3.4.2. Dental gutta-percha	22
3.4.3. Root canal sealers	25
3.4.3.1. Overview	25
3.4.3.2. Types of root canal sealers	26
3.4.3.2(a). Zinc oxide and eugenol sealers	26
3.4.3.2(b). Calcium hydroxide-based sealers	27
3.4.3.2(c). Resin sealers	27
3.4.3.2(d). Glass ionomer-based sealers	28
3.4.3.2(e). Silicone-based sealers	29
3.4.3.2(f). Urethane methacrylates	29
3.4.4. Resin obturation materials	30
3.4.4.1. Composition of the Resilon obturation system	32
3.5. Methods of filling the root canal	35
3.5.1. Lateral compaction technique	35
3.5.1.1. Variants of cold lateral compaction	36
3.5.2. Vertical compaction technique	37
3.5.3. Thermocompaction technique	40
3.5.4. Thermoplastic injection technique	41
3.5.5. Core carrier technique	42
3.6. Evaluation of the quality of root obturation materials	45
3.6.1. Overview	45
3.6.2. Microleakage of root filling materials	45
3.7. Methods for the evaluation of the quality of root canal obturation	54
3.7.1. Tooth sectioning	54
3.7.1.1. Introduction	54
3.7.1.2. Cross-sections	55
3.7.1.3. Longitudinal sections	58
3.7.2. Scanning electron microscopy	58
3.7.3. Tooth-clearing technique	59
3.7.4. Radiographic method	60
3.8. Summary	62

CHAPTER FOUR: MATERIALS AND METHOD	64
4.1. Collection and preparation of teeth	65
4.1.1. Collection of teeth	65
4.2. Teeth selection and preparation	65
4.2.1. Teeth selection	65
4.2.2. Preparation of root canal system	66
4.2.2.1. Radicular access	66
4.2.2.2. Provisional working length	67
4.2.2.3. True working length and instrumentation sequence	67
4.3. Compatibility between finger spreaders and accessory filling cores	69
4.4. Obturation of root canal system	69
4.4.1. Lateral compaction of RealSeal™ as experimental group I	69
4.4.2. Lateral compaction of gutta-percha as control group I	72
4.4.3. Warm vertical compaction of RealSeal™ as experimental group II	72
4.4.4. Warm vertical compaction of gutta-percha as control group II	74
4.5. Radiographic evaluation	75
4.6. Evaluation of root canal obturation	78
4.6.1. Time taken during obturation	78
4.6.2. Assessment of extrusion of root filling materials	78
4.6.3. Assessment of obturation quality	78
4.6.3.1. Assessment of cross-sections	78
4.6.3.1(a). Sectioning of specimens	78
4.6.3.1(b). Measurements of cross-sections	80
4.6.3.1(c). Reliability measurement	80
4.6.3.2. Scanning electron microscopic observation	81
4.7. Data analysis	85
4.7.1. Time taken for obturation	85
4.7.2. Extrusion of filling materials through apical foramen	85
4.7.3. Percentages of filling core materials, sealers and voids	85
CHAPTER FIVE: RESULTS	86
5.1. Compatibility between finger spreaders and accessory cores	87
5.2. Post-operative radiographic evaluation	87

5.3. Time taken for obturation	87
5.4. Extrusion of filling materials through apical foramen	89
5.5. Percentages of canal area occupied by filling cores, sealers and voids	91
5.5.1. First section (L1)	91
5.5.2. First section (L3)	95
5.5.3. Third section (L6)	100
5.6. Quality of the obturation	104
5.6.1. Root canal shapes	104
5.6.2. Lateral compaction of RealSeal™	104
5.6.3. Lateral compaction of gutta-percha	104
5.6.4. Warm vertical compaction of RealSeal™	105
5.6.5. Warm vertical compaction of gutta-percha	105
5.7. Reliability test	115
5.8. Scanning electron microscopy	115
CHAPTER SIX: DISCUSSION	120
6.1. Methodology	121
6.1.1. Tooth collection	121
6.1.2. Root canal preparation and irrigation	121
6.1.2.1. Root canal preparation	121
6.1.2.2. Irrigation protocol	123
6.1.3. Pilot study	124
6.1.4. Evaluation method	125
6.1.5. Root canal sealer	127
6.2. Results	127
6.2.1. Time taken for obturation	127
6.2.2. Extrusion of filling materials	128
6.2.3. Materials and techniques used for obturation	130
6.2.4. Scanning electron microscopy	141
6.3. Limitations of this stud	142
CHAPTER SEVEN: CONCLUSIONS AND SUGGESTIONS	143
7.1. Conclusions	144
7.2. Suggestions	145

Appendix II	
Data analysis	180

LIST OF FIGURES

Chapter Four: Materials and Method

Figure	Description	Page
4.1	Medium size finger spreader and accessory cores (gutta-percha and RealSeal™)	71
4.2	RealSeal™ obturation system	71
4.3	Root canal pluggers #5, #7, #9 and #11	76
4.4	Elements™ obturation unit	76
4.5	Elements RealSeal™ obturation cartridge	77
4.6	Elements gutta-percha obturation cartridge	77
4.7	ISOMET™ Low speed saw	79
4.8	Schematic diagram of root canal sections	79
4.9	Video camera and zoom microscope	82
4.10	Measurement of percentages of canal area occupied by RealSeal™ core material and sealer	83
4.11	Measurement of percentages of canal area occupied by gutta-percha	83
4.12	Field-emission gun scanning electron microscope (FESEM)	84

Chapter Five: Results

Figure	Description	Page
5.1	Extrusion of filling materials against no extrusion	90
5.2	Mean percentages of filling cores (RealSeal™ and gutta-percha), sealers and voids using lateral compaction and warm vertical compaction of injected materials (WVCI) at L1	92
5.3	Mean percentages of filling cores (RealSeal™ and gutta-percha), sealers and voids using lateral compaction and warm vertical compaction of injected materials (WVCI) at L3	96
5.4	Mean percentages of filling cores (RealSeal™ and gutta-percha), sealers and voids using lateral compaction and warm vertical compaction of injected materials (WVCI) at L6	101
5.5	Photomicrographs of specimens utilizing LC/R at L1, L3 and L6	107
5.6	Photomicrographs of specimens utilizing LC/GP at L1, L3 and L6	109
5.7	Photomicrographs of specimens utilizing WC/R at L1, L3 and L6	111
5.8	Photomicrographs of specimens utilizing WC/GP at L1, L3 and L6	113
5.9	Low power (200×) SEM micrographs of longitudinal root sections. (A) Lateral compaction of gutta-percha, (B) lateral compaction of RealSeal™, (C) warm vertical compaction of gutta-percha and (D) warm vertical compaction of RealSeal™	116
5.10	Medium power (600×) SEM micrographs of longitudinal root sections. (A) Lateral compaction of gutta-percha, (B) lateral compaction of RealSeal™, (C) warm vertical compaction of gutta-percha and (D) warm vertical compaction of RealSeal™	117
5.11	High power (1000×) SEM micrographs of longitudinal root sections. (A) Lateral compaction of gutta-percha, (B) lateral compaction of RealSeal™, (C) warm vertical compaction of gutta-percha and (D) warm vertical compaction of RealSeal™	118
5.12	High power (4000×) SEM micrographs of longitudinal root sections. (A) Lateral compaction of gutta-percha, (B) lateral compaction of RealSeal™, (C) warm vertical compaction of gutta-percha and (D) warm vertical compaction of RealSeal™	119

LIST OF TABLES

Chapter Three: Review of Literature

Table	Description	Page
3.1	Advantages and disadvantages of microleakage evaluation methods	48
3.2	Results of comparative microleakage studies	51

Chapter Five: Results

Table	Description	Page
5.1	Mean times (minutes) taken for obturation	88
5.2	Extrusion cross tabulation	90
5.3	Mean percentages of filling core materials, sealers and voids using lateral compaction (LC) and warm vertical “continuous wave” techniques (WVCW) at L1	92
5.4	The effect of different materials and different techniques on percentages of filling core materials, sealers, and voids at L1	93
5.5	The effect of different materials on the mean percentages of filling core materials using lateral compaction technique (LC) at L1	94
5.6	The effect of different materials on the mean percentages of filling core materials using warm vertical “continuous wave” technique (WVCW) at L1	94
5.7	Mean percentages of filling core materials, sealers and voids using lateral compaction (LC) and warm vertical compaction techniques (WVCW and WVC1) at L3	96
5.8	The effect of different materials and different techniques on percentages of filling core materials, sealers, and voids at L3	97
5.9	The effect of different materials on the mean percentages of filling core materials and voids using lateral compaction technique (LC) at L3	98
5.10	The effect of different materials on the mean percentages of sealers using lateral compaction technique (LC) at L3	98

5.11	The effect of different materials on the mean percentages of filling core materials and voids using warm vertical compaction technique (WVCW and WVCI) at L3	99
5.12	The effect of different materials on the mean percentages of sealers using warm vertical compaction technique (WVCW and WVCI) at L3	99
5.13	The effect of different techniques on the mean percentages of gutta-percha core material and sealer at L3	99
5.14	The effect of different techniques on the mean percentages of RealSeal™ core material and sealer at L3	99
5.15	Mean percentages of filling core materials, sealers and voids using lateral compaction and warm vertical compaction of injected materials (WVCI) at L6	101
5.16	The effect of different materials and different techniques on percentages of filling core materials, sealers, and voids at L6	102
5.17	The effect of different techniques on the mean percentages of RealSeal™ core material, sealer and voids at L6	103
5.18	The effect of different techniques on the mean percentages of gutta-percha core material, sealer and voids at L6	103
5.19	Shapes of root canals at L1	106
5.20	Shapes of root canals at L3	106
5.21	Shapes of root canals at L6	106
