## ABSTRACT

The surface modification of magnetic nanoparticles was carried out in order to change the polarities. The coated particles with octyl group on the surface to ensure the attachment of the functional group and hence improved the extraction process in two step of Dispersive Liquid Liquid Microextraction, DLLME method.

Combination of two steps of DLLME method and Gas Chromatography Electron Captured Detector, GC-ECD were used for the extraction and determination of pesticides extracted from water samples (treated waste water, tap water from laboratory and housing area). In this extraction method,  $\text{CCl}_4$  was selected as the extraction solvent since it shows the highest relative recovery, 41.20 to 98.30 % and 1-octanol was selected as dispersal solvent with the relative recovery of 29.02 to 81.39 %.

Under the optimum condition, extraction of pesticides residues in treated waste water, tap water (laboratory and housing area) were investigated. Chlorothalonil in treated waste waters shows the highest content ( $0.6789 \mu\text{gL}^{-1}$ ) compared tap water in laboratory and housing area, which lies in the values of  $0.4781$  and  $0.4781 \mu\text{gL}^{-1}$  respectively. The presence of DDT residues in three different types of water were detected at the level of  $0.1762$  to  $0.7173 \mu\text{gL}^{-1}$ . The residue of DDE detected in treated waste water was  $0.2122 \mu\text{gL}^{-1}$  compared to tap water in housing area ( $0.1762 \mu\text{gL}^{-1}$ ). However, there are no residues of DDE was detected in tap water collected in laboratory. Chloropyriphos shows the higher percentage recovery compared to the other pesticides residues in the ranges of 43.21 to 86.79 %.

## **ACKNOWLEDGEMENTS**

First and foremost, i would like to take this opportunity to express my heartfelt to the Most Compassionate and Merciful to Allah and Prophet Muhammad and his companions for enabling me to complete this research successfully. My warmest thanks to my honourable supervisor, Prof. Dr. Mohd Radzi bin Abas for his guidance, encourage and valuable discussion throughout this research.

In this opportunity, i would like to express my sincere appreciation to all the members of laboratory especially to Dr. Tay Kheng Soo, Miss Siti farhana, Ms. Norashikin and Ms. Ruhaida for their kind's guidance, discussions, comments and suggestions during this project.

Not forgotten, a very special thanks to my beloved husband, Mr. Siddiq Hafiz bin Hassan and families for their endless support and motivation throughout this research. To those who indirectly contributed in this research, your kindness means a lot to me. Thank you very much.

## TABLE OF CONTENT

Original Literary Work Declaration	
Abstract	i
Acknowledgment	ii
Table of Content	iii
List of Table	iv
List of Figure	vi
List of Abbreviation	vii
CHAPTER 1 INTRODUCTION	
1.1 Pesticides	1
1.2 Historical Development of Pesticides	1
1.3 Pesticides Toxicity in Aquatic System	3
1.4 Effect of Pesticides	5
1.4.1 Human Health	5
1.4.2 Ecological Effect	6
1.5 Pesticide Monitoring in Water	9
1.6 Sample Preparation	13
1.6.1 Dispersive Liquid-Liquid Microextraction (DLLME)	14
1.6.2 Principle of DLLME	15
1.6.3 Advantage and Disadvantages of DLLME	17
1.6.4 Application of DLLME	17
1.7 Objective of this Work	20

## CHAPTER 2 METHODOLOGY

2.1	Introduction	21
2.2	Synthesize and Derivatization of Magnetic Nanoparticles	22
2.2.1	Synthesize of Magnetic Nanoparticles	22
2.2.2	Surface Modification of Magnetic Nanoparticles	22
2.2.3	Characterization Magnetic Nanoparticles	23
2.2.3.1	FT-IR	23
2.2.3.2	CHN Analysis	23
2.3	Real Water Samples	23
2.4	Sample Preparation	24
2.5	DLLME Procedures	24
2.6	Instrumental Analysis	25

## CHAPTER 3 RESULTS AND DISCUSSION

3.1	Synthesize and Derivatization of Magnetic Nanoparticles	27
3.1.1	Synthesize of Magnetic Nanoparticles	27
3.1.2	Surface Modification on Magnetic Nanoparticles	28
3.2	Characterization of Magnetic Nanoparticles	28
3.2.1	FT-IR Analysis	28
3.2.2	CHN Analysis	31
3.3	Extraction Optimization	32
3.3.1	Organic Solvent Selection.	32
3.3.2	Selection of Disperser Solvent.	35
3.4	Evaluation of the Performance of DLLME with Real Water Analysis	36

CHAPTER 4 CONCLUSION	40

## LIST OF ABBREVIATION

DDT	Dichlorodiphenyltrichloroethane
DDE	Dichlorodiphenyldichloroethylene
LD <sub>50</sub>	Lethal Dose
WHO	World Health Organization
ADI	Acceptable daily intake
DNA	Double Nucleic Acid
PAHs	Polyaromatic Hydrocarbons
PCBs	Polychlorinated biphenyls
ND	Not Detectable
SPE	solid-phase extraction
MIT	Molecular Imprinting Technique
SPME	Solid-Phase Micro-extraction
SDME	Single-Drop Micro-extraction
HF-LPME	Hollow Fibre-based Liquid-Phase Micro-extraction
GC	Gas Chromatography
HPLC	High Performance Liquid Chromatography
DLLME	Dispersive Liquid-Liquid Micro-extraction
LLE	liquid-liquid Extraction
<i>K</i>	Distribution coefficient
AAS	Atomic Absorption Spectroscopy
GC-FID	Gas Chromatography - Flame Ionization Detector
GC-MS	Gas Chromatography - Mass Spectroscopy
GC-ECD	Gas Chromatography - electron Capture Detector
mmol	Milimol

OCp	Organochlorine Pesticides
ng	nanogram
C <sub>2</sub> Cl <sub>4</sub>	Tetrachloro ethylene
CH <sub>3</sub> Cl	Chloroform
C <sub>6</sub> H <sub>5</sub> Cl	Chlorobenzene
ACN	Acetonitrile
μg	microgram
L	Litre
MeOH	Methanol
EtOH	Ethanol
