

## **APPENDIX**

### **APPENDIX I: ANTIMICROBIAL ACTIVITY**

#### **Appendix I (a) Agar preparation**

##### **i. Muller Hinton Agar (MHA) preparation (Oxoid)**

15.2 g of Muller hinton agar powder was dissolved with 400ml of distilled water. The agar was sterilized by autoclaved at 121<sup>0</sup>C for 15 minutes.

##### **ii. Sabouroud Dextrose Agar (SDA) preparation (Oxoid)**

13 g of Saboroud dextrose agar powder was dissolved with 200ml of distilled water. The agar was sterilized by autoclaved at 121<sup>0</sup>C for 15 minutes.

##### **iii. Brain Heart Infusion Agar (BHIA) preparation (Oxoid)**

10.4 g of Brain heart infusion agar powder was dissolved with 200ml of distilled water. The agar was sterilized by autoclaved at 121<sup>0</sup>C for 15 minutes.

##### **iv. Yeast Peptone Agar (YPA) preparation**

The items needed to prepare yeast peptone agar were:-

Glucose monohydrus 8g

Peptone bacteriological 8g

Yeast extract 4g

Agar bacteriological 8g

All items were dissolved with 400ml distilled water and pH was adjusted at 6.8.

The agar was sterilized by autoclaved at 121<sup>0</sup>C for 15 minutes.

## **Appendix I (b) Broth preparation**

### **i. Muller Hinton Broth (MHB) preparation (Oxoid)**

1.05 g of Muller hinton broth powder was dissolved with 50ml of distilled water. The broth was sterilized by autoclaved at 121<sup>0</sup>C for 15 minutes.

### **ii. Sabouroud Dextrose Broth (SDB) preparation (Oxoid)**

1.5 g of Sabouroud dextrose broth powder was dissolved with 50ml of distilled water. The broth was sterilized by autoclaved at 121<sup>0</sup>C for 15 minutes.

### **iii. Brain Heart Infusion Broth (BHIB) preparation (Oxoid)**

1.85 g of Brain heart infusion broth powder was dissolved with 50ml of distilled water. The broth was sterilized by autoclaved at 121<sup>0</sup>C for 15 minutes.

### **iv. Yeast Peptone Agar (YPB) preparation**

The items needed to prepare yeast peptone broth were:-

Glucose monohydrus 1g

Peptone bacteriological (Oxoid) 1g

Yeast extracts (Oxoid) 0.5g

All items were dissolved with 50ml distilled water and pH was adjusted at 6.8.

The broth was sterilized by autoclaved at 121<sup>0</sup>C for 15 minutes.

**Appendix I (c): The disc diffusion assay of *Alpinia* species against 12 microorganisms**

#### Appendix I (d): Result of minimum inhibitory concentration (MIC)

Data of MIC of *A. pahangensis* rhizome hexane extract by spectrophotometer method for *B. cereus*

Concentration ( $\mu\text{g/ml}$ )	Absorbance	Colonies formed
0	$1.223 \pm 0.038$	Crowded
0.78	$0.259 \pm 0.020$	Crowded
1.56	$0.185 \pm 0.002$	Crowded
3.12	$0.14 \pm 0$	Few
6.25	$0.106 \pm 0.006$	Few
12.5	$0.004 \pm 0.003$	No

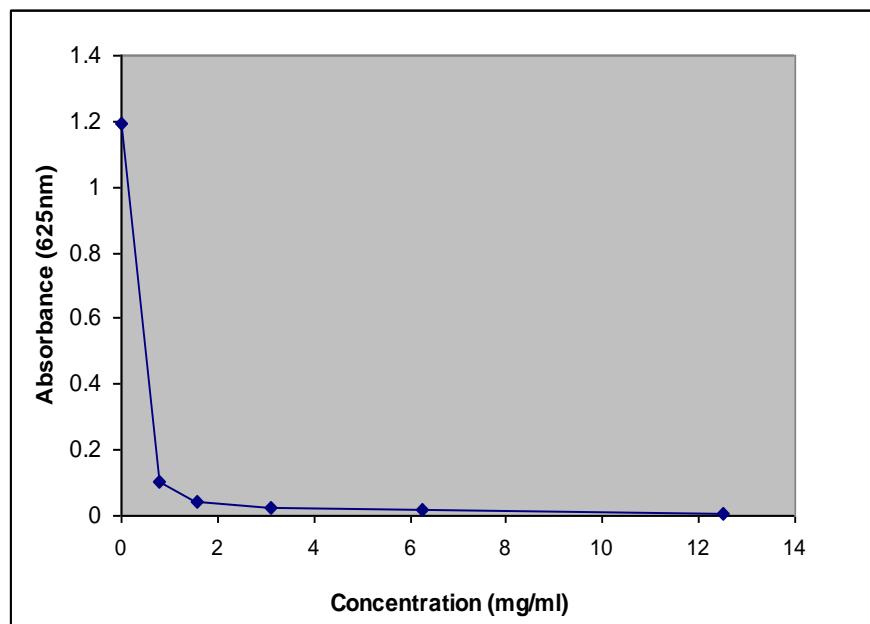

The effect of concentrations of *A. pahangensis* rhizome hexane extract against *B. cereus*

Data of MIC of *A. pahangensis* rhizome dichloromethane extract by spectrophotometer method for *B. cereus*

Concentration ( $\mu\text{g/ml}$ )	Absorbance	Colonies formed
0	$1.194 \pm 0.08$	Crowded
0.78	$0.102 \pm 0.006$	Crowded
1.56	$0.044 \pm 0.008$	Crowded
3.12	$0.023 \pm 0.003$	No
6.25	$0.017 \pm 0.003$	No
12.5	$0.009 \pm 0.003$	No

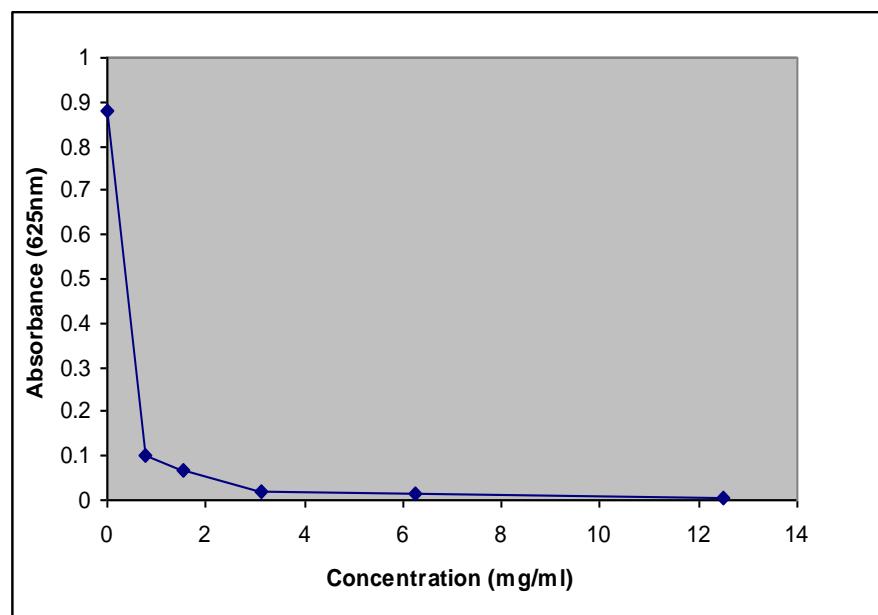

The effect of concentrations of *A. pahangensis* rhizome dichloromethane extract against *B. cereus*

Data of MIC of *A. pahangensis* rhizome hexane extract by spectrophotometer method for *B. subtilis*

Concentration (mg/ml)	Absorbance	Colonies formed
0	0.879 ± 0.018	Crowded
0.78	0.102 ± 0.008	Crowded
1.56	0.067 ± 0.006	Crowded
3.12	0.021 ± 0.002	No
6.25	0.012 ± 0.003	No
12.5	0.007 ± 0.003	No

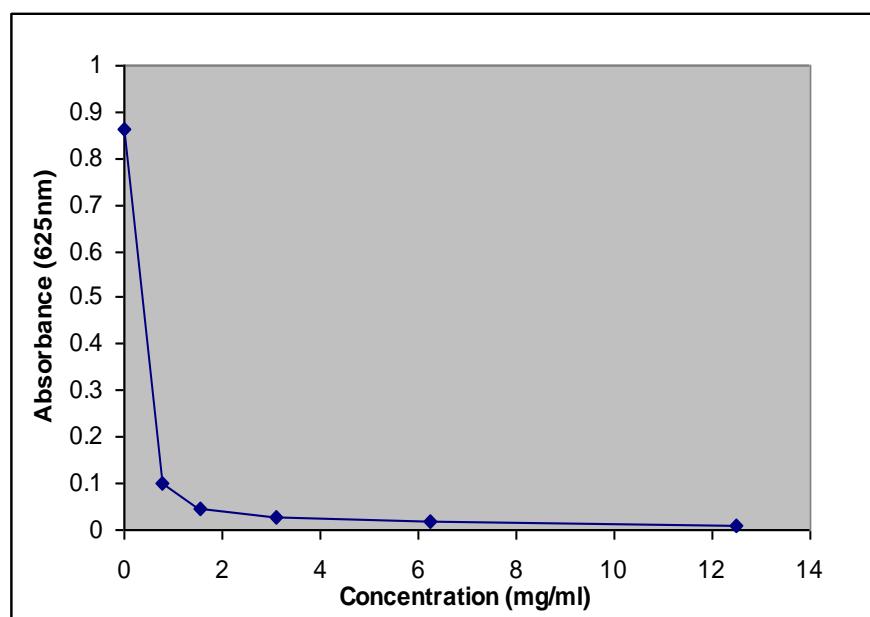

The effect of concentrations of *A. pahangensis* rhizome hexane extract against *B. subtilis*

Data of MIC of *A. pahangensis* rhizome dichloromethane extract by spectrophotometer method for *B. subtilis*

Concentration (mg/ml)	Absorbance	Colonies formed
0	0.865 ± 0.007	Crowded
0.78	0.099 ± 0.006	Crowded
1.56	0.045 ± 0.008	Few
3.12	0.003 ± 0.004	No
6.25	0.018 ± 0.001	No
12.5	0.007 ± 0.002	No

The effect of concentrations of *A. pahangensis* rhizome dichloromethane extract against *B. subtilis*

## **APPENDIX II: ANTIOXIDANT ACTIVITY**

### **Appendix II (a): Reaction mixture of extracts, DPPH and methanol**

Stock solution (extract): 20 mg/ml, DPPH: 8 mg/ml

Concentration of Crude extracts (mg/ml)	Volume of Methanol (μl)	Volume of Crude extracts (μl)	Volume of DPPH Solution(μl)
5	725	250	25.0
4	775	200	25.0
3	825	150	25.0
2	875	100	25.0
