ABSTRACT

Biofuel is biodegradable, nontoxic and suitable substitute for fossil fuels, and capable to reduce greenhouse gas like CO₂, CO, HC and NO_x emissions. The study investigated the use of waste date from date palm tree (*Phoenix dactylifera*) as a source of bio-ethanol production that could be used as a fuel. The bioethanol was produced by fermentation process using the waste dates as a substrates for yeast and enzymes such as cellulase and amylase. The effects of different fermentation parameters such as yeast concentration, pH, temperatures, fermentation periods, water content and substrate components on bioethanol production were investigated. From the results, the maximum yield of bioethanol (25%) was achieved at Yeast concentration of 5g/l under pH 5.8 at 28°C for 5 days. Crushed/ground seed showed second highest yield compared to whole seed which was treated by cellulase and amylase. Viscosity and acid value were found within the limits prescribed by the latest American Standards for Testing Material (ASTM). Based on ASTM standardized tests, the produced bioethanol was found be acceptable as a transportation fuel. Though, the bioethanol samples analyses revealed no toxic elements, it did contained metals such as Fe, Cu, Sn, Mn, Ag, Mo, Zn, P, Ca, Mg, Si and Na. Fuel consumption was observed to reduce when 10% (v/v) produced bioethanol blend in gasoline was used as compared to 5% bioethanol blend. The greenhouse gas emissions such as hydrocarbons (HC), sulphur dioxide (SO₂), carbon dioxide (CO₂) and nitrogen oxides (NO_x) were lower in bioethanol blended with fuel (E₅ and E₁₀) than 100% gasoline. From the results stated herein, it could be suggested that waste dates could be used as a potential feedstock for bioethanol production that could be an appropriate substitute fuel for engine use.

ACKNOWLEDGEMENTS

All praise be to Allah (SWT) for blessing me with the opportunity to complete this study in University of Malaya.

I am thankful to my parents, brothers and sisters for their profound moral and financial support that made the realization of this work possible.

Nevertheless, I would like to express my heartfelt gratitude to my supervisors in persons of Associate Professor Dr. A. B. M. Sharif Hossain and Dr. Khanom Binti Simarani for their supervision, patience, encouragement and continuous help during the course of this research work.

I would like to acknowledge the Faculty of Science for facilities supplement and for providing the suitable environment for my research work.

With respect, I am thankful to my friends in Malaysia and outside Malaysia, for the support whenever I needed them. And special thanks for my friends Dr. Abdullaziz Althobiani, Dr. Salman Alshamim and Ahmad Mohammed Gumel for their support during the course of this work.

Finally, I dedicate this work to my beloved parents for their care, support and understanding throughout the period of the study.

ABSTRACT	iii
ACKNOWLEDGEMENTS	iv
TABLE OF CONTENTS.....	v
LIST OF TABLES	viii
LIST OF FIGURES	ix
LIST OF SYMBOLS AND ABBREVIATION	xi

CHAPTER 1

INTRODUCTION.....	1
1.1 Overview: Bio-fuel and bioethanol.....	1
1.2 Objectives.....	3

CHAPTER 2

LITERATURE REVIEW.....	4
2.1 Bio-fuels: bioethanol.....	4
2.2 Bioethanol as a source of bioenergy	6
2.3 Feedstock: sources of bioethanol	9
2.3.1 Date as bioethanol feedstock.....	12
2.4 Bioethanol production <i>via</i> fermentation	12
2.4.1 Yeast fermentation and enzyme hydrolysis	14
2.4.1.1 Enzymatic hydrolysis.....	16
2.4.2 Batch fermentation.....	16
2.4.3 Fermentation process	18
2.4.4 Pretreatment	20
2.4.4.1 The pretreatment process.....	21
2.5 Use of bioethanol in energy generation	22
2.5.1 Ethanol blend	25

2.5.2 Engine emission	26
2.5.3 Bioethanol for electricity production	27
2.5.4 Scope of bio-fuels	28
2.6 Environmental implication of bioethanol	28

CHAPTER 3

MATERIALS AND METHODS	31
3.1 Raw materials.....	31
3.2 Yeast	31
3.3 Enzymes.....	32
3.4 Experimental design.....	33
3.5 Preparation of samples.....	33
3.6 Fermentation	36
3.6.1 Effect of yeast concentration	36
3.6.2 Effect of physical parameters on bioethanol productions from rotten dates.....	36
3.6.2.1 Effect of fermentation time	36
3.6.2.2 Effect of initial pH	36
3.6.2.3 Effect of temperature changing.....	37
3.6.2.4 Effect of water content.....	37
3.6.3 Effect of Different date fruit parts.....	37
3.7 Filtration.....	37
3.8 Analytical methods	38
3.8.1 pH.....	38
3.8.2 Total Soluble Solid (TSS).....	38
3.8.3 Bioethanol concentration (Yield %)	38
3.8.4 Glucose estimation.....	39
3.8.5 Viscosity analysis.....	40
3.8.6 Elemental Analysis	40
3.8.7 Engine test.....	40
3.8.8 Statistical analysis.....	41

CHAPPER 4

RESULTS AND DISCUSSION	42
4.1 Bioethanol production in different yeast concentrations	42

4.2 Bioethanol production in different fermentation periods	44
4.3 Influence of physical parameters on bioethanol production	45
4.3.1 Effect of initial pH	45
4.3.2 Effect of temperature	45
4.3.3 Effect of different water content	48
4.4 Bioethanol production in different dates fruit parts using yeast, amylase and cellulase.	50
4.5 Chemical properties of bioethanol produced from dates fermentation	52
4.6 Engine performance and gas emission.....	54
