ACKNOWLEDGEMENT

I wish to express my sincere appreciation to my supervisors, Dr. Lee Poh Ping and Dr. Norma Mansor, for providing me with academic guidance during my studies here. Their patience and active support are very much appreciated. I also thank Ms. Norafidah Tajuddin for her linguistic comments.

Many thanks go to my foreign service colleagues in Kuala Lumpur, in particular, Col. Kitamura Masaya and Ms. Jenny Yee Wai Kwan from the Embassy of Japan and Ms. Sarah Bewley and Mrs. Caroline Barber from the British High Commission. I would also like to thank the Ministry of Finance, Japan, for allowing me to pursue this program on a part time basis.

Finally, a number of people have encouraged me to complete this work. They are too numerous to be listed, but I would like to thank them all for their help and constructive criticism.

ABSTRACT

The purpose of this study is to explore the mechanism of money and credit flows in the boom and bust of a bubble economy; to relate it to chronological changes in the international monetary regime; and, based on theories of monetary economics and political economy, to propound policy recommendations for the Japanese government on the issues surrounding monetary integration in Asia.

Reviewing the concepts of money and credit from the T-account (i.e., a socially combined balance-sheet) perspective, we employ a credit risk approach of money and credit. We then introduce the 2-dimensional T-account matrix model, and use it to examine the credit-flow mechanism of economic development and the bubble economy. Subsequently, we develop our model into 3-dimensional T-account matrices to deal with international credit flows.

Adopting a conceptual framework of monetary political economy with the T-account matrices, which is based on the preferences (i.e., utility functions) of money issuers in a foreign asset/debt position and on the technical development of monetary stages, we review historical changes in international monetary regimes, and in the process, modify the framework where applicable.

After an applied analysis of the economic development in Asia since the 1980s, we discuss the technical aspects of Asian monetary integration. In addition, we deal with the Japanese dilemma over Asian integration and the implications for public policy. We propose the establishment of a multilateral financial institution such as the Asian Monetary Fund (AMF), which will be expected to work as a lender of last resort for regional financial stability.

CONTENTS

Chapter 1 Introduction	1
Objective: to examine the mechanism of capital flows	1
Analytical frameworks	7
A short history of international financial developments in Asia since 1990	10
Survey of theoretical literature	14
Keynes and Hicks	14
Gurley and Shaw	15
Benjamin Friedman	17
James Tobin	20
Keohane and Nye	23
Ekelund and Tollison	25
Scope of the study	27
Data sources	27
Chapter outlines	28
Chapter 2 Credit: T-account perspective	30
2.1 Critique of monetary theories up to the present day	30
2.1.1 Traditional approach	30
2.1.2 Liquidity approach	33
2.1.2.1 Means of payment	33
2.1.2.2 Liquidity preference	35
2.1.3 Portfolio approach	37
2.1.3.1 Store of value	37
2.1.3.2 Portfolio preference	38
2.1.4 Credit risk approach	42
2.1.4.1 Stability of value	42
2.1.4.2 Collateral preference	44
2.2 Conceptual framework of monetary stages	49
2.2.1 Monetary stages in the T-account	49
2.2.1.1 Reserve money (monetary base)	49
2.2.1.2 Deposit money	50
2.2.1.3 Credit securities and loans	52
2.2.1.4 Net worth assets and debts	55
2.2.1.5 Foreign assets and debts	56
2.2.2 Transition among monetary stages	57
2.2.3 Innovation of new credit instruments	58
2.2.3.1 Derivatives	58

2.2.3.2	Electronic money	59
2.3	General equilibrium model of the T-account	64
2.3.1	Model 1: Singular standard regime	64
2.3.2	Model 2: Pluralist regime	66
 Chapter 3 Credit flows: T-account matrix analysis		82
3.1	Model 1: Static circular flow	83
3.1.1	Model building: 2-dimensional T-account matrix	83
3.1.2	Equilibrium of the model	85
3.1.2.1	Credit supply coefficients	85
3.1.2.2	Interdependence coefficients of multipliers	86
3.1.3	Applied manipulation of the model	88
3.1.3.1	Division of matrices	88
3.1.3.2	Transposition of matrices	89
3.2	Model 2: Dynamic development	93
3.2.1	Disequilibrium and economic development	93
3.2.2	Boom and bust of a bubble economy	95
3.2.3	Law's system	97
3.2.3.1	Bubble phenomena in retrospect	97
3.2.3.2	Financial scheme of Law's system	102
3.2.3.3	A model: the boom and bust in Law's system	105
3.3	Model 3: International credit flows	111
3.3.1	International currency	111
3.3.1.1	Definition	111
3.3.1.2	Functions	111
3.3.1.3	Key currency	113
3.3.1.4	Seigniorage	114
3.3.2	Equilibrium and disequilibrium in the pluralist regime	115
3.3.2.1	3-dimensional T-account matrices model	115
3.3.3	Four financing models of economic development	117
3.3.3.1	Domestic asset accumulation (domestic saving) model	117
3.3.3.2	Domestic borrowing (asset inflation) model	118
3.3.3.3	Foreign asset accumulation (export driven) model	118
3.3.3.4	Foreign borrowing (capital import) model	119
 Chapter 4 Political economy and the international monetary regime		126
4.1	The conceptual framework of monetary political economy	126
4.1.1	The international monetary regime	126
4.1.2	Actors in the international monetary regime	129
4.1.3	Preferences: utility functions of actors	130
4.1.3.1	Foreign asset and debt position	130
4.1.3.2	Monetary-stage development	136

4.2	International monetary regime change in retrospect	139
4.2.1	Mercantilism: Bullionism to financial revolution	139
4.2.1.1	Portugal and Spain	139
4.2.1.2	The Netherlands	142
4.2.1.3	Financial revolution	143
4.2.1.4	Restructured model: Mercantilism	147
4.2.2	Laissez-faire under Pax Britannica	151
4.2.2.1	Restructured model: Laissez-faire	153
4.2.3	The classic gold standard: Imperialism	156
4.2.3.1	Restructured model: Imperialism	159
4.2.4	The interwar gold exchange standard	163
4.2.4.1	Restructured model: Interwar period	166
4.2.5	The Bretton Woods regime	170
4.2.5.1	Restructured model: the Bretton Woods regime	175
4.2.6	The post-Bretton Woods non-system	180
4.2.6.1	Restructured model: the post-Bretton Woods non-system	182

Chapter 5 Asian monetary integration **201**

5.1	Economic developments in Asia since 1980s	201
5.1.1	The Japanese economy	201
5.1.1.1	External credit flows	201
5.1.1.2	Burst of the bubble economy	204
5.1.2	Asian financial crisis	206
5.1.2.1	Case 1: Thailand and Indonesia	206
5.1.2.2	Case 2: Malaysia	207
5.2	Technical background to monetary integration in Asia	209
5.2.1	Future options for regional integration	209
5.2.2	Variations of exchange rate systems	210
5.2.2.1	Floating exchange rates	210
5.2.2.2	Pegged exchange rates	211
5.2.3	Optimum currency areas	212
5.2.3.1	A currency area and its optimum conditions	212
5.2.3.2	Application to Asia	214
5.2.4	Geographical sphere of regional integration	218
5.2.4.1	ASEAN and its major initiatives	219
5.2.4.2	EAEC	220
5.2.4.3	The missing link: Asian monetary integration	222
5.3	Japanese dilemma over Asian integration	224
5.3.1	Subordination to the United States	224
5.3.1.1	Rent-seeking behavior of a rule-making state	224
5.3.1.2	IMF-supported programs in the Asian financial crisis	225
5.3.1.3	Structural changes to international credit flows	229
5.3.2	Historical trauma	230
5.3.2.1	Greater East Asia Co-prosperity Sphere	230
5.3.2.2	Coping with China	231
5.3.2.3	Recapitulation of the past and resolution for the future	232

CHAPTER 6 CONCLUSION	238
6.1 Verification of the first hypothesis	238
6.2 Verification of the second hypothesis	239
6.3 Asian monetary integration	240
BIBLIOGRAPHY	243
