

# LIST OF CONTENTS

<b>CHAPTER 1</b>	<b>INTRODUCTION</b>	
1.1	General	1
1.1.1	Definition	1
1.1.2	Background of the Study	2
1.2	Illicit Drug Market	4
1.2.1	Global Drug Production	4
1.2.2	Economics of Illicit Drug Trade	7
1.2.3	Illicit Drugs Differ from Licit Products	10
1.3	The Drug Scene in Malaysia	12
1.3.1	The Historical Emergence of Drugs of Abuse in Malaysia	12
1.3.2	The Prevalence of Drugs of Abuse in Malaysia	14
1.3.3	Dangerous Drugs Act 1952	17
1.4	Scope of this Study	19
1.4.1	General Scope	19
1.4.2	Assumptions	19
1.4.3	Objectives of the Study	21
<b>CHAPTER 2</b>	<b>REVIEW OF HEROIN: THE EMERGENCE, THE PRODUCTION AND THE ABUSE</b>	
2.1	Preliminary	22
2.2	Drug Classification	23
2.3	Definition of Heroin	24
2.4	Heroin: From Past to Present	26
2.5	Manufacture of Illicit Heroin	30
2.5.1	Introduction	30
2.5.2	Cultivation	32

2.5.3	Isolation of Morphine	34
2.5.4	Conversion of Morphine to Heroin Base	40
2.5.5	Conversion of Heroin Base to Heroin Hydrochloride	41
2.5.6	Cutting Process	42
2.5.7	Street Products: Heroin Powder or Pills	44
2.5.8	The Entry of Impurities	46
2.6	Physical and Chemical Properties of Opium-based Alkaloids	47
2.7	Pharmacology of Heroin	48
<b>CHAPTER 3 REVIEW OF FORENSIC ANALYSIS AND PROFILING OF ILLICIT HEROIN</b>		
3.1	Preliminary	51
3.2	Overview of the Forensic Science	51
3.2.1	Foundation of Forensic Sciences	52
3.2.2	Drug Analysis	56
3.3	Analysis of Illicit Heroin	59
3.3.1	Visual Examination and Physical Analysis	59
3.3.2	Chemical Analysis and Instrumental Analysis	61
3.4	The Basis of Drug Profiling	68
3.5	Profiling of Illicit Heroin	74
3.5.1	Preliminary Examination: Heroin Substance and Plastic Receptacles	77
3.5.2	Sample Treatment for Organic Impurities	80
3.5.3	Instrumental Analysis	82
3.5.4	Stability	87
3.6	Chemometrics	89
3.7	Forensic Intelligence	93
3.8	Metaphysical Review of Forensic Drug Intelligence: Heroin Profiling	99

3.8.1	Forensic Intelligence Stems From Basic Notions	100
3.8.2	Law of Identity	103
3.8.3	Causality	107
3.8.4	Necessity	112
3.8.5	Holons and Holarchy	114
<b>CHAPTER 4 METHODOLOGY</b>		
4.1	Preliminary	116
4.2	Materials	118
4.2.1	Chemicals and Reagents	118
4.2.2	Chemical Standards	118
4.2.2.1	Profiling of Major Components	118
4.2.2.2	Profiling of Manufacturing Impurities	119
4.2.2.3	Profiling of Trace Elements	119
4.2.3	Glassware and Plastic Ware	119
4.2.4	Apparatus	120
4.2.5	Instrumentation	121
4.3	Sampling	121
4.4	Task 1: Visual Examination and Physical Characteristics	123
4.4.1	Police Information	124
4.4.2	Photography	125
4.4.3	Color of the Heroin Substance	127
4.4.4	Texture of the Heroin Substance	128
4.4.5	Wrapping Style of the Plastic Package	128
4.4.6	Sealing of the Plastic Package	131
4.4.7	Weight of the Heroin Substance and Plastic Receptacle	132
4.4.8	Width of the Plastic Receptacle	133

4.4.9	Thickness of the Plastic Receptacle	134
4.5	Task 2: Analysis of Plastic Films by ATR-FTIR	134
4.5.1	ATR-FTIR Procedure for Plastic Films	135
4.5.1.1	Settings for ATR-FTIR	135
4.5.1.2	Analysis of Case Plastic Films	135
4.5.2	Instrumental and Statistical Validation for Spectral Variation by Specimen Plastic Films	136
4.6	Task 3: Profiling of Major Components by GC-FID and GC-MS	137
4.6.1	GC-FID Procedures for the Profiling of Major Components	137
4.6.1.1	GC-FID Method	137
4.6.1.2	Analysis of Heroin Case Samples	138
	i) Internal Standard Solution	138
	ii) Calibration Standards and Control Sample	138
	iii) Preparation and Analysis of Case Samples	139
4.6.1.3	Optimization and Validation of the GC-FID Method	139
4.6.2	Statistical Validation Using Simulated Heroin Links	142
4.6.2.1	Preparation of Samples for Simulated Links	142
4.6.2.2	Analysis of Simulated Heroin Samples	144
4.6.3	GC-MS Procedures for the Profiling of Major Components	145
4.6.3.1	GC-MS Method	145
4.6.3.2	Analysis of Heroin Case Samples	145
4.6.3.3	Validation of GC-MS Method	145
4.7	Task 4: Profiling of Manufacturing Impurities by GC-FID	146
4.7.1	GC-FID Procedures for the Profiling of Manufacturing Impurities	147
4.7.1.1	GC-FID Method	147
4.7.1.2	Analysis of Heroin Case Samples	147

	i)	2 N Sulfuric Acid	147	
		ii)	Extraction Solvent	147
		iii)	Sample preparation by liquid-liquid extraction	148
	4.7.1.3	Optimization and Validation of the GC-FID Method	148	
		i)	Optimization and Validation by a Control Sample	148
		ii)	Optimization and Validation Using Validation Samples	149
	4.7.2	Statistical Validation Using Simulated Heroin Links	152	
	4.7.2.1	Preparation of Samples for Simulated Links Using the Weight Equivalent to 15 mg Heroin Base Approach	152	
	4.7.2.2	Preparation of Samples for Simulated Links Using the Constant 650 mg Weight Approach	153	
4.8	Task 5: Profiling of Trace Elements by ICP-MS		154	
4.8.1	ICP-MS Procedures for the Profiling of Trace Elements		154	
	4.8.1.1	ICP-MS Method	154	
	4.8.1.2	Analysis of Heroin Case Samples	155	
		i)	Dissolving Acid Solution (1% HNO <sub>3</sub> )	155
		ii)	Standard Preparation	155
		iii)	Calibration	156
		iv)	Sample Preparation	156
	4.8.1.3	Partial Method Validation	157	
4.8.2	Statistical Validation Using Simulated Heroin Links		158	
4.8.3	Additional Studies		159	
	4.8.3.1	Drinking Water	159	
	4.8.3.2	Piped Water and Water from a Contaminated Container	159	
4.9	Task 6: Data Management and Database Build-up		160	
4.9.1	General Procedure		160	

4.9.2	Pretreatment Methods	160
4.9.3	Multivariate Analysis	161
<b>CHAPTER 5 RESULTS AND DISCUSSION</b>		
5.1	Preliminary	163
5.2	Task 1: Visual Examination and Physical Characteristics	165
5.2.1	Police Information	165
5.2.2	Photography	166
5.2.3	Color of the Heroin Substance	169
5.2.4	Texture of the Heroin Substance	173
5.2.5	Wrapping Style of the Plastic Package	175
5.2.6	Sealing of the Plastic Package	177
5.2.7	Weight of the Heroin Substance	178
5.2.8	Weight of the Plastic Receptacle	181
5.2.9	Width of the Plastic Receptacle	183
5.2.10	Thickness of the Plastic Receptacle	184
5.2.11	Classification of Heroin Cases by Physical Characteristics	187
5.2.12	Summary	188
5.3	Task 2: Analysis of Plastic Films by ATR-FTIR	189
5.3.1	Qualitative Classification of Case Plastic Films Based on Polymer Compositions	189
5.3.2	Instrumental and Statistical Validation for Spectral Variation Analysis	194
5.3.2.1	Data Normalization for Minimization of Instrumental and Environmental Influences	195
5.3.2.2	Repeatability and Reproducibility Improved by Data Normalization	199
5.3.2.3	Statistical Evaluation of Normalized Data by PCA	200
5.3.3	IR Spectral Variation Analysis for the Classification of Case Plastic Films	203

5.3.4	Summary	207
5.4	Task 3: Profiling of Major Components by GC-FID and GC-MS	208
5.4.1	GC-FID Method Optimization and Validation	208
5.4.1.1	Choice of GC Capillary Column and Selectivity	209
5.4.1.2	Solvent Studies	212
5.4.1.3	Repeatability and Reproducibility	214
5.4.1.4	Linearity and Limit of Detection (LOD)	215
5.4.1.5	Accuracy as Measured by Recovery	217
5.4.1.6	Dissolution Vessels and Sample Weight Test	218
5.4.1.7	Sample Stability	220
5.4.1.8	Capability of the Method for Sample Classification	221
5.4.1.9	Summary	224
5.4.2	Evaluation of the Statistical Robustness of the Optimized GC-FID Method in Sample Classification by Pattern Analysis	225
5.4.2.1	Performance of the Methods	225
5.4.2.2	Evaluation of Statistical Robustness using PCA	227
5.4.2.3	Summary	232
5.4.3	Statistical Validation Using Simulated Heroin Links	233
5.4.3.1	Simulated Dataset	233
5.4.3.2	Cutting Efficiency	236
5.4.3.3	Compositional Variation	237
5.4.3.4	Evaluation of Pretreatment Methods	241
5.4.3.5	Evaluation of Linkages and Distance Measures	245
5.4.3.6	Summary	251
5.4.4	GC-MS Method Optimization and Validation	252
5.4.4.1	Optimization of GC-MS Parameters	252
5.4.4.2	Specificity and Precision of the Results	253

5.4.4.3	Precision of Retention Time	254
5.4.4.4	Limit of Detection	255
5.4.4.5	Summary	255
5.4.5	Analysis of Heroin Case Samples	256
5.4.5.1	Qualitative Analysis by GC-MS	256
5.4.5.2	Quantitative analysis by GC-FID	258
5.4.5.3	Classification of Heroin Case Samples by Major Opium-based Alkaloids	262
5.4.5.4	Summary	264
5.4.6	Additional Study: Development of a Novel Chemometric Procedure (Tetrahedrons) for Sample Classification	265
5.4.6.1	Development of the Tetrahedron Model	265
i)	Construction of a Tetrahedron	265
ii)	Computation	268
iii)	Advantages of the Tetrahedron Method	271
5.4.6.2	Chemometric Procedure Using Tetrahedrons	271
5.4.6.3	Computation	273
5.4.6.4	Summary	274
5.5	Task 4: Profiling of Manufacturing Impurities by GC-FID	276
5.5.1	GC-FID Method Optimization and Validation	276
5.5.1.1	Choice of GC Capillary Column	277
5.5.1.2	Choice of Ramping Rate	279
5.5.1.3	Peak Identification and Relative Retention Times	281
i)	Target Manufacturing Impurities	281
ii)	n-Alkanes in Control Sample	285
5.5.1.4	Injection Volume	285
5.5.1.5	Injector Temperature	287

5.5.1.6	Choice of Extraction Solvent	289
5.5.1.7	Extraction pH	291
5.5.1.8	Extraction Vessels	293
5.5.1.9	Additional Optimization Aspects	293
5.5.1.10	Repeatability, Reproducibility and Linearity Checked by Validation Samples	294
5.5.1.11	Repeatability, Reproducibility, Linear Range, LOD, LOQ and Linearity Checked by the Control Sample	297
5.5.1.12	Extraction Reproducibility	299
5.5.1.13	Summary	300
5.5.2	Statistical Evaluation Using Simulated Heroin Links	302
5.5.2.1	Variation Associated with LLE and Sample Weight Difference	303
5.5.2.2	Sample Weight Equivalent to 15 mg heroin base Sample Weight Approach	305
	i) Evaluation of Pretreatment Methods	305
	ii) Evaluation of Linkages and Distance Measures	308
5.5.2.3	The Constant Sample Weight (650 mg) Approach	309
	i) Principal Component Analysis	311
	ii) Hierarchical Cluster Analysis	312
	iii) K-means clustering	313
	iv) Discriminant analysis	314
5.5.2.4	Harmonized Statistical Model for Both Approaches	315
5.5.2.5	Summary	316
5.5.3	Analysis of Heroin Case Samples and Sample Classification by Trace Manufacturing Impurities	318
5.5.3.1	Sample Weight Equivalent to 15 mg heroin base Approach	318
5.5.3.2	The Constant Sample Weight (650 mg) Approach	322

5.5.3.3	Classification of Heroin Case Samples Using Harmonized Statistical Model	324
5.5.3.4	Limitations	325
5.5.3.5	Summary	326
5.6	Profiling of Trace Elements by ICP-MS	327
5.6.1	ICP-MS Method Validation	327
5.6.1.1	Repeatability and Reproducibility	328
5.6.1.2	Linearity, LOD and LOQ	329
5.6.1.3	Accuracy as Measured by Recovery	332
5.6.1.4	Sample Precision	332
5.6.1.5	Sample Weight Test	334
5.6.1.6	Dissolution Vessels	336
5.6.1.7	Sample Filtration	336
5.6.1.8	Summary	339
5.6.2	Statistical Validation Using Related Samples	340
5.6.2.1	Variation Associated with ICP-MS Analysis	340
5.6.2.2	Evaluation of Pretreatment Methods	341
5.6.2.3	Evaluation of Linkages and Distance Measures	344
5.6.2.4	Summary	346
5.6.3	Analysis of Heroin Case Samples	347
5.6.3.1	Sample Analysis	347
5.6.3.2	Elemental Composition in Heroin Samples	348
5.6.3.3	Potential Elements from Tap Water and Mixing Container	351
5.6.3.4	Correlation between Elements	354
5.6.3.5	Classification of Heroin Case Samples by Trace Elements	356
5.6.3.6	Summary	358

5.7	Task 6: Data Management and Database Buildup	359
5.7.1	Development of a Database	359
5.7.2	Summary	361
<b>CHAPTER 6 CONCLUSION</b>		
6.1	Summary of the Findings	362
6.2	Suggestions for Future Work	369
<b>APPENDIXES</b>
