In the name of Allah, the Most Gracious, the Most Merciful. All praise is due to Allah, and peace and blessings be upon our Prophet Muhammad and upon his family and his companions. After a milestone of laborious experimental work, this thesis represents the end of my long journey in obtaining my Master's degree. The Quran says, "Verily, with hardship, there is relief" (Quran 94:6) and it is indeed true. I am so relief and grateful that I manage to complete my thesis finally. The ups and downs during the work have prepared me to be a better scientist in the future.

From the early discussion of research plan to the final writing, there are dozens of remarkable individuals who are always there to support me along this rough road. First and foremost, special appreciation goes to my supervisors, Dr Norhaniza Aminudin and Prof. Dr Noorlidah Abdullah, for their great supervision. They have been very generous in delivering invaluable suggestions, sharing awesome knowledge, providing windows of opportunity to learn a lot of skills and inspiring me to go higher.

I would like to express my genuine gratitude to Universiti Sains Malaysia (USM) and Kementerian Pengajian Tinggi (KPT) Malaysia for providing me with financial support. Significantly, the financial assistance has eased my financial worries and allowed me to focus thoroughly on my studies. Research grant plays a pivotal key in which it provides the seed money and serves as an impetus to accomplish the goals of a project. Hence, a distinguished acknowledgement is conveyed to University of Malaya for funding me with research grants PS270/2009B and PV012/2011B.

I am deeply indebted to my labmates; Puan Shida, Sis Badjie, Ijah, Aishah, Dr. Hasnol, Wawa, Sis Murni, Hasni, Amal, Hamdi, Aaron Haziq, Sis Gee, Mira and Maiza. Let's not forget to count in Suhana, Taufik, Muzzamil and also Fahmi. Thanks a bunch for the meaningful friendship and encouragement. They have helped immensely by borrowing me ideas to solve problems, being the shoulder to cry on and giving me
