

LIST OF TABLES

- Table 3.1:** Reaction mixtures containing ascorbic acid, DPPH and methanol
- Table 3.2:** Reaction mixtures containing crude extracts, phosphate buffer, potassium ferricyanide and ferric chloride
- Table 3.3:** Reaction mixtures containing EDTA, FeCl₂ and ferrozine
- Table 3.4:** The diet for specific group of experimental animal in 14 days of oral toxicity study
- Table 3.5:** Group of experimental animals with specific diet
- Table 4.1:** Percentage of water content in each 100g of sample
- Table 4.2:** Percentage of average crude extract yield from 100g of dried sample
- Table 4.3:** Percentage of inhibition of plant samples and Ascorbic acid. Values are expressed as mean \pm SE and n= 3.
- Table 4.4:** Percentage of inhibition of *H. sabdariffa* extract. Values are expressed as mean \pm SE and n= 3.
- Table 4.5:** Photometric reading of the sample. Values are expressed as mean \pm SE and n= 3.
- Table 4.6:** Number of brine shrimp survived after 24 hours exposed to different concentration of plant extracts.
- Table 4.7:** LC₅₀ values of *H. sabdariffa* variety extracts on brine shrimp lethality bioassay
- Table 4.8:** Serum values of liver function test for animal study after 14 day oral administration of 1000 mg/kg body weight/ day plant sample. Values are expressed as mean \pm SE and n = 6.
- Table 4.9:** Serum values of renal function test for animal study after 14 day oral administration of 1000 mg/kg body weight/day plant sample. Values are expressed as mean \pm SE and n=6.
- Table 4.10:** Serum values of liver function test for animal study after 14 day oral administration of 500 mg/kg plant sample. Values are expressed as mean \pm SE.

- Table 4.11:** Serum values of renal function test for animal study after 14 day oral administration of 500 mg/kg plant sample. Values are expressed as mean \pm SE and n = 6.
- Table 4.12:** Level of total triglyceride in blood serum of experimental animals in various groups on 0, 30 and 60 days of treatment. Values are expressed as mean \pm SE and n = 6.
- Table 4.13:** Level of total cholesterol in blood serum of experimental animals in various groups on 0, 30 and 60 days of treatment. Values are expressed as mean \pm SE and n = 6.
- Table 4.14:** Level of HDL cholesterol in blood serum of experimental animals in various groups on 0, 30 and 60 days of treatment. Values are expressed as mean \pm SE and n = 6.
- Table 4.15:** Level of LDL cholesterol in blood serum of experimental animals in various groups on 0, 30 and 60 days of treatment. Values are expressed as mean \pm SE and n = 6.
- Table 4.16:** Percentage of intimal surface covered by atherosclerosis in different groups of animals
- Table 4.17:** R_f values and visualization of chromatogram of Arab variety on TLC plate (Eluent: acetone: methanol = 3:7)
- Table 4.18:** R_f values and visualization of chromatogram of UKMR-1 variety on TLC plate (Eluent: acetone: methanol = 3:7)
- Table 4.19:** R_f values and visualization of chromatogram of UKMR-2 variety on TLC plate (Eluent: acetone: methanol = 3:7)
