

ACKNOWLEDGEMENT

In the name of Allah, the most beneficent and most merciful

My sincere gratitude goes to my supervisor Professor Dr. Agamuthu P. who dynamically guided me throughout the course of this work. Countless time he gave me new ideas and suggestions to make my work better and more comprehensive. Also, to Professor Paul H. Brunner, who was generous enough to share his opinions and comments to improve my work, during his two short visits to Malaysia.

I thank Ministry of Science Technology and Innovation (Previously Ministry of Science Technology and Environment) for the National Science Fellowship (NSF) award which enabled me to conduct my research without any funding issues. Also, to the Unit Penyelidikan DiTaja, and University of Malaya through PJP fund (VOT F).

I am also thankful to Alam Flora Pvt. Ltd. for their collaboration and support for this project. Also, to all municipalities in Selangor who were directly or indirectly involved.

My appreciation goes to my fellow friends, Siti Suhaila, Firuza, Irwan Tasla, Aiza, Nithiya, Hao Ying, Syed Fatimah, and the Solid Waste laboratory members for their support. Not forgetting Allayarham Kahlil Mohamed Khidzir for all his valuable advice.

Special thanks to my youngest brother Ahmad Faizal Shahul Hamid for his endless help during the waste composition studies at the landfills as the assistant and driver. Last but not least, I thank my parents, my sisters, my brothers for their support and patience.
