Abstract ii

Abstrak iv

Acknowledgements vi

1 Introduction 1

1.1 Background 1

1.2 Objectives 2

1.3 Methodology 3

1.4 Organization of the Thesis 4

2 Yang and Laughlin's Hamiltonians and the angular Momentum 5

2.1 Introduction 5

2.2 The Yang Potential 6

2.3 The Yang-Baxter model 14

2.4 The BCS-BEC crossover 15

2.5 The Laughlin’s wave function 15

2.6 Miscellaneous Discussion 29

2.6.1 Non-Abelian products 29

2.6.2 Phase transitions 31

2.6.3 Statistics 34

2.6.4 Order parameter 36

2.6.5 Topology 36

2.6.6 Tunneling 38

2.6.7 Activation 40

2.6.8 Thermodynamics 41

2.6.9 Gauge 42

2.6.10 Optical Spectra 43

2.6.11 Wigner crystallization 44

2.6.12 Phonons 45

2.6.13 Hierarchy 46

2.6.14 Rotons 50

2.6.15 Symmetries 50

2.6.16 Spin 51

2.6.17 Currents 52

2.6.18 Entanglement 53

2.6.19 Mott insulator 55

2.6.20 Experiments 59

2.7 Data interpretation 59

2.7.1 Graphite Hall Effect 59

2.7.2 Electron clusters 64

2.7.3 Graphene 68

2.7.4 AlGaAs/GaAs 70

2.8 deHaas-Van Alphen effect 79

2.9 Conclusions 80

3 PFaffian, Gaffnian and Haffnian States: Quantum Computation 81

3.1 Introduction 81

3.2 Calculations 82

3.3 Discussion 85

3.4 Conclusions 86

4 Clustering of Electrons and the Filling Factor in Quantum Hall Effect 87

4.1 Introduction 87

4.2 Conclusions 93

5 Symmetry Properties of Laughlin's Wave Function and Related States 94

5.1 Introduction 94

5.2 Wave function 96

5.3 Spin and magnetic field: Hall resistance 97

5.4 Graphite 98

5.5 Conclusions 99

6 Cyclotron Resonance and Kohn's Theorem 101

6.1 Introduction 101

6.2 Kohn's theorem 103

6.3 Spin Hubbard model 105

6.4 Peierls-Luttinger phase factor 109

6.5 Search for an interaction 110

6.6 Conclusions 112

7 Conclusions 113

Appendix A 115

Bibliography 116
