

TABLE OF CONTENTS

DECLARATION	ii
ABSTRACT	iii
ABSTRAK	v
ACKNOWLEDGEMENT	vii
TABLE OF CONTENTS	viii
LIST OF FIGURES	x
LIST OF TABLES	xi
LIST OF SYMBOLS AND ABBREVIATIONS	xii
CHAPTER 1 INTRODUCTION	1
1.1 Background	1
1.2 Literature review	4
1.3 Layout of the dissertation	12
CHAPTER 2 PROBLEM FORMATION	14
2.1 Development of the notions of state estimation	14
2.1.1 The principle of maximum likelihood estimation	15
2.2 Matrix formulation	22
2.3 State Estimation of an AC network	24
2.3.1 Development of estimation formula	24
CHAPTER 3 METHOD DESCRIPTION	30
3.1 Notion of numerical ill-conditioning	30
3.2 Orthogonal decomposition method	33
3.3 Orthogonal decomposition method based on Householder transformation	34
3.3.1 Householder transformation	35
3.3.2 Description of the orthogonal decomposition via Householder transformation algorithm	37
3.3.3 The orthogonal decomposition algorithm	39

CHAPTER 4	RESULTS AND DISCUSSIONS	41
4.1	Numerical examples and discussions	41
4.1.1	The 6-bus test system	41
4.1.2	The IEEE 30-bus test system	49
4.1.3	The 30-bus Sumatera Barat power system	57
CHAPTER 5	CONCLUSIONS AND IMPLEMENTATION	66
5.1	Conclusions	66
5.2	Future works	67
5.3	Implementation of power system state estimation	67
REFERENCES		70
APPENDICES		74
A	Newton's method	74
B	Measurement model	75
C	Jacobian matrix	76
D	Load flow result using fast decouple method for 6-bus test system	78
E	Load flow result using fast decouple method for IEEE 30-bus test system	79
F	Load flow result for Sumatera Barat 30-bus system	81
