

ABSTRACT

Renowned for the potential in alleviating poverty, co-operative movement has been encouraged and supported by the government. This research investigates co-operative performances and efficiency in Malaysia using quantitative and qualitative methods. The first essay revealed that co-operatives' role in economic development is still relevant. Credit and banking co-operatives had contributed to the movement's growth and development. The National Co-operative Plans are important blueprint for co-operative development in the country. Investigation on factors influencing co-operative membership in the second essay revealed that membership is favourable to the older age groups as compared to younger age groups. Those working in government sector are more likely to be members. The duration of membership and frequency in annual general meeting attendance are found to be positively related to co-operative shareholding. An analysis on satisfaction and perception of co-operative performance showed that patrons are satisfied with the quality and reliability of goods and services. There are positive perceptions on the benefits of co-operation and on the role of co-operative in economic development and community wellbeing.

Data Envelopment Analysis (DEA) of co-operative membership target groups in the third essay showed the co-operative groups' efficiency score of 0.605 or equivalent to 65.3 percent inefficiency level in producing outputs. Co-operatives have operational "slacks" and inefficient resource usage. Tobit regression showed that turnover, equity and members are significant in influencing efficiency scores of co-operatives. Comparison of efficiency and productivity level of Bank Rakyat with conventional banks showed that Bank Rakyat was among the top five banks. Further analysis by including 5 other Islamic banks brought it to top six positions. The source of total factor productivity progress was technological progress while technical efficiency change remained stagnant. Tobit regression analysis revealed that loan intensity and assets were significant in determining the efficiency scores. Environmental factors are significant in influencing technological and scale efficiencies. Bank's status (co-operative or Islamic) is significant in influencing technical and pure technical efficiency of banks.

Action research in the last essay reviewed that co-operative establishment requires local communities involvement in decision-making process, human capabilities enhancement programmes, empowerment, entrepreneurial spirits, leadership qualities and local community commitments. Of the three community co-operatives in Marine Park Islands, Tioman achieved highest while Redang experienced moderate progress. Tinggi co-operative failed because lack of leadership, commitment and entrepreneurial spirits. Although co-operatives in Tioman and Redang have the potential to be the vehicle in alternative livelihoods strategy and social cohesion objectives, the co-operatives are faced with ample challenges.

This research contributes towards an economic approach in performance evaluation of co-operatives in Malaysia. The high percentage of inefficient co-operatives revealed had provided empirical evidence that achievement of the Second National Co-operative Plan goals by 2015 will be affected. Results and recommendations from study are important for improvement of current co-operative management, policies, laws and regulations in Malaysia.

ABSTRAK

Gerakan koperasi Malaysia mendapat sokongan dan galakan dari kerajaan kerana berpotensi membantu membasmi kemiskinan. Kajian ini menyiasat pencapaian dan kecekapan koperasi di Malaysia dengan menggunakan kaedah penyelidikan kuantitatif dan kualitatif. Esei pertama menunjukkan bahawa peranan koperasi dalam pembangunan ekonomi masih relevan. Koperasi kredit dan bank menjadi penyumbang kepada pertumbuhan dan pembangunan gerakan ini. Dasar Koperasi Negara adalah pelan tindakan penting bagi pembangunan koperasi negara. Penyiasatan ke atas faktor yang mempengaruhi keanggotaan dalam esei kedua mendedahkan yang keanggotaan memihak kepada kumpulan umur yang lebih tua berbanding kumpulan muda. Pekerja sektor kerajaan didapati lebih cenderung untuk menjadi anggota koperasi. Tempoh keanggotaan dan kekerapan menghadiri mesyuarat agung tahunan didapati berkaitan secara positif dengan pegangan saham koperasi. Analisis kepuasan dan persepsi terhadap prestasi koperasi menunjukkan pelanggan berpuas hati dengan kualiti dan kebolehpercayaan barangan dan perkhidmatan. Terdapat persepsi positif mengenai manfaat bekerjasama dan peranan koperasi dalam pembangunan ekonomi dan kesejahteraan masyarakat.

Analisis Litupan Data (DEA) ke atas kumpulan sasar koperasi dalam esei ketiga menunjukkan skor kecekapan 0.605 atau tahap ketidakcekapan sebanyak 65.3 peratus dalam menghasilkan output. Terdapat kekurangan dalam operasi dan ketidakcekapan penggunaan sumber. Model regresi Tobit menunjukkan perolehan, ekuiti dan anggota mempengaruhi skor kecekapan koperasi. Perbandingan kecekapan dan tahap produktiviti Bank Rakyat dengan bank konvensional menunjukkan yang bank koperasi adalah di antara bank kelima teratas. Analisis selanjutnya mengambilkira 5 bank Islam lain menempatkan bank koperasi ke tempat keenam teratas. Sumber kepada kemajuan jumlah faktor pengeluaran bank koperasi ialah kemajuan teknologi, manakala perubahan kecekapan teknikal kekal tidak berubah. Analisis regresi Tobit mendedahkan intensiti pinjaman dan aset bank adalah signifikan dalam menentukan skor kecekapan. Faktor persekitaran signifikan dalam mempengaruhi kecekapan teknologikal dan skala. Status bank (koperasi atau Islam) juga signifikan dalam mempengaruhi kecekapan teknikal dan teknikal tulin bank.

Penyelidikan tindakan dalam esei terakhir menggambarkan yang penubuhan koperasi memerlukan penglibatan masyarakat tempatan dalam proses membuat keputusan, program peningkatan keupayaan manusia, pemeraksanaan, semangat keusahawanan, kualiti kepimpinan dan komitmen masyarakat setempat. Daripada tiga koperasi di Kepulauan Taman Laut, koperasi Tioman mencapai kemajuan tertinggi manakala koperasi Redang mengalami pencapaian sederhana. Koperasi Tinggi gagal kerana masalah ketiadaan kepimpinan, komitmen dan semangat keusahawanan. Meski pun mempunyai potensi digunakan bagi mencapai strategi kehidupan alternatif dan objektif perpaduan sosial, koperasi berdepan dengan banyak cabaran.

Kajian menyumbang kepada aspek pendekatan ekonomi dalam penilaian prestasi koperasi di Malaysia. Penemuan peratus ketidakcekapan yang tinggi memberikan bukti empirikal yang pencapaian matlamat Pelan Koperasi Kebangsaan Kedua pada tahun 2015 akan terjejas. Keputusan dan cadangan dari penyelidikan ini adalah penting untuk peningkatan pengurusan semasa, dasar-dasar, undang-undang dan peraturan koperasi di Malaysia.

Specially dedicated to Najiah, Syahirah and Hafiz

ACKNOWLEDGEMENTS

Praise to Allah for granting me the chance to complete my Ph.D. In the preparation of this thesis I would like to express my profound gratitude to my supervisor, Associate Professor Dr. Fatimah Kari for her invaluable guidance, assistance and patience. Her support has been the impetus that kept me working on, even at difficult times. I am also thankful to Prof. Dr. Rajah Rasiah, Prof. Dr. Norma Mansor, Dr. Lee Hwok Aun and Dr. Che Hashim Hassan, Head of ULPA and University of Malaya for supporting and extending my research leave thus helped to lessen my teaching burden which gave me the opportunity to pursue this PhD until completion. Thank you also to my friends Dr. Siti Rohani Yahaya, Dr. Rohana Jani, and Dr. Muzalwana Abdul Latif for going through the thesis drafts and helping me improved this thesis.

The encouragement and support from my family, particularly my husband, children and parents have been a tremendous help in the conduct of research and writing of this thesis. For that I would like to sincerely thank them all from the bottom of my heart. I am also obliged and thankful to many friends and colleagues, Rosita Hamdan, Sharifah Munirah, Natasya Saufi, Dr. Noor Asiah, Nur Shahirah and others, too numerous to mention here, who have helped me directly or indirectly in the discussions, correspondence or otherwise. Thank you very much, if not for you all, I would not have made it as this Ph.D. journey is long, lonely and dreadful at times.

Last but not least, this thesis will not be as it is now, had it been without the combined efforts of everybody. I am elated, yet humbled and grateful that this PhD is completed. Alhamdulillah, Allah is the greatest and thank you Allah.
