

ACKNOWLEDGEMENTS

In this process of accomplishment of this thesis, I am, without doubt, grateful for all the help and guidance given throughout my PhD journey. First and foremost, my appreciation goes to University of Malaya and Ministry of Higher Education for giving me the opportunity to embark on this research and sponsoring my doctoral study. The provision of research grant, University of Malaya Research Grant (UMRG) also certainly supported me towards the completion of my PhD thesis.

Special appreciation and gratitude of utmost sincerity to my respectful supervisors, Prof. Dr. Sr Azlan Shah Bin Ali and Associate Prof. Dr. Sr Anuar Bin Alias for their guidance, comments and endless support. Without the proficient and experienced insights and guidance, the process would not have been as smooth and the outcome not as satisfactory. Thanks are also due to the staff of Faculty of Built Environment for their support.

My appreciation also goes to the officers from procurement section of Ministry of Higher Education especially Puan Rabiah Sathee and En. Johan Bin Abu Bakar Bt. Abdullah for the provision of information for my research. I would like to express my heartfelt gratitude to the respondents and interviewees who have sacrificed their precious time to provide me necessary information and data required during data collection process. The appreciation also extended to my friends and postgraduate candidates for sharing their experience and companionship in providing motivation. Special thanks to Dr. Au Yong Cheong Peng, Nur Farhana Binti Azmi, Kam Hui Wen and Chen Jia Woon that contributed greatly with their valuable comments, inspiration and kept me motivated throughout the whole journey.

I am deeply indebted to my beloved family members especially my parents (Chua Ang Sew and Goh Kim Hooi), my brothers, sister in-laws and relatives for their encouragements, understanding and continuous support throughout my PhD journey.
