

## LIST OF FIGURES

	Page
Figure 1.0 : Repeating unit of PET	3
Figure 2.1 : The relationship between the equivalent weight ratio of PET:Gly and glycolysis conversion (%) of recycled PET flakes at 210°C and glycolysis time of 2.0 hours	20
Figure 2.2 : The relationship between the glycolysis temperature and glycolysis conversion of recycled PET flakes with a glycolysis time of 2.0 hours and 1:6 ratio of PET:Gly	21
Figure 2.3 : $\ln k$ versus $1/T$	22
Figure 2.4 : The relationship between the glycolysis time and glycolysis conversion of recycled PET flakes with a glycolysis temperature at 210°C and ratio of PET:Gly of 1:6	24
Figure 2.5 : FTIR spectra for PET flakes before (A) and after (B) glycolysis	27
Figure 2.6 : NMR spectrum of the glycolysed product, GP3B	29
Figure 2.7 : Possible structure for the glycolysed product obtained in the glycolysis reaction of PET and glycerol	30
Figure 2.8 : TGA thermogram of the glycolyzed product, GP1B	32
Figure 2.9 : Thermogram of (a) glycerol-blue curve and (b) PET flakes-red curve	33
Figure 3.1 : Position of samples taken from cup-rise foam and direction of foam rise	45
Figure 3.2 : Schematic of the compression loading: (a) parallel to foaming direction and (b) perpendicular to foaming direction	46
Figure 3.3 : Effect of variation of glycolysed PET in the polyol mixture on viscosity	47
Figure 3.4 : Urethane reaction	48
Figure 3.5 : Semi-rigid PU foams	50
Figure 3.6 : Water reactions with isocyanate	52
Figure 3.7 : FTIR spectra of PU foam, polyol mixture and isocyanate	54
Figure 3.8 : FTIR spectrum of foaming process at a) 1 minute b) 90 min	55

Figure 3.9 :	Optical microscope images of the semi-rigid foam	56
Figure 3.10 :	Effect of top and bottom core of PU foam on density (a) and compression strength (b)	58
Figure 3.11 :	Stress-strain curves of foam cells position at (a) 25% and (b) 50% compressive strain.	59
Figure 3.12 :	Cell models of foams. Xu (2011)	61
Figure 3.13 :	Effect of isocyanate index on the compression strength and density of the foam.	63
Figure 3.14 :	Allophanate reactions	64
Figure 3.15 :	Effect of percentage of glycolysed PET on the compression strength and density of the foam	66
