Abstracts	iii
Abstrak	v
Acknowledgements	vii
List of figures	ix
List of tables	xiii
<b>Chapter 1 Introduction</b>	
1.1 What is a Be star?	1
1.2 Goal of this work	3
1.3 Motivation of this study	4
<b>Chapter 2 Literature Review</b>	
2.1 Be stars in general	5
2.2 Physical characteristics of circumstellar disk of Be stars	8
2.2.1 Geometry	8
2.2.2 Kinematics	9
2.3 Formation of the Be disk	10
2.3.1 Models of disk formation	12
2.3.1.1 Wind compressed disks model	12
2.3.1.2 Magnetically torque disk model	13
2.3.1.3 Viscous disk model	15
2.4 Mass loss rate in the Be stars	16
2.5 Rotation of Be stars	18

2.6	Line profile variations	20
2.6.1	Phase change	20
2.6.2	V/R variation	21
2.6.3	E/C variation	23
2.6.4	Radial velocity variation	24
2.7	Be binary	25
<b>Chapter 3</b>	<b>The program star: <math>\delta</math>-Scorpii</b>	
3.1	Introduction	27
3.2	The multiplicity of $\delta$ -Scorpii	27
3.3	The periastron passage of $\delta$ -Scorpii	28
<b>Chapter 4</b>	<b>Methodology: Data acquisition, reduction and measurement</b>	
4.1	The spectra of $\delta$ -Scorpii	30
4.2	Data reduction	31
4.2.1	Spectral normalization	31
4.2.2	Telluric line removal	33
4.3	Profile measurements	
4.3.1	Profile fitting	34
4.3.2	Implementation of Voigt function	35
4.3.3	Equivalent width (EW) and Full width at half maximum (FWHM)	37
4.3.4	Radial velocity	41
4.3.5	Heliocentric correction	41
4.4	Methodology of the evolutionary study of $\delta$ -Scorpii	41
<b>Chapter 5</b>	<b>Spectral profiles analysis of <math>\delta</math>-Scorpii</b>	
5.1	The optical spectrum of Delta-Scorpii at a glance	43
5.2	Double peak profile	49

5.3	Balmer lines	52
5.3.1	H $_{\alpha}$ variability behavior	56
5.3.2	V/R variation	65
5.3.3	H $_{\beta}$ and H $_{\gamma}$ variability behavior	71
5.4	Helium lines: HeI $\lambda$ 6678 emission line	74
5.4.1	Periodical behavior and characteristics of HeI $\lambda$ 6678	78
5.4.2	The equivalent width and disk radii of HeI $\lambda$ 6678 and H $_{\alpha}$	83
5.5	The photospheric lines	87
5.6	The 2011 periastron passage of $\delta$ -Scorpii	94
5.6.1	EW, I/I $_c$ and V/R variations	94
5.6.2	Radial velocity	98
5.6.3	Lines profile variation	99
<b>Chapter 6</b>	<b>The evolutionary study of <math>\delta</math>-Scorpii</b>	
6.1	Some previous work on the evolutionary stage of Be stars	107
6.2	Aim of the evolutionary study	109
6.3	The parameters	110
6.3.1	Mass	110
6.3.2	Rotation	111
6.4.2.1	Critical velocity	112
6.3.3	Effective temperature, $T_{eff}$	116
6.3.4	Radius	116
6.4	The model evolutionary tracks of $\delta$ -Scorpii	119
6.4.1	Evolution of the rotational velocity	125
<b>Chapter 7</b>	<b>Discussion and conclusions</b>	
7.1	Introduction	128

7.2	Disk development and motion	129
7.3	One-armed oscillation disk model in Be disk of $\delta$ -Sco	138
7.4	Evolutionary study	143
7.5	Conclusions	144
7.6	Suggestions for future work	147
	Bibliography	148
	Appendix A (BeSS Archive Data)	156
	Appendix B (EV Stellar Evolution – Job tasks)	170
