## ABSTRACT

Medicinal plants and lactic acid bacteria are used to treat a wide range of disease conditions. The aim of the study was to determine antimicrobial and antioxidant activities of bioactive compounds and peptides from different morphological parts of common medicinal plants namely *Morinda citrifolia*, *Annona squamosa*, *Alstonia angustiloba*, an Australian plant mixture and lactic acid bacteria. In the first part of the study, different methods were used to standardize the extraction of antimicrobial and antioxidant compounds. It was found that methanol extraction of plants tissue showed higher antimicrobial activity than aqueous extracts against the test bacteria *Staphylococcus aureus* (RF 122), *Escherichia coli* (UT181), *Bacillus cereus* (ATCC 14579), *Pseudomonas aeruginosa* (PA7), methicillin-resistant *Staphylococcus aureus* (ATCC BA-43) and *Helicobacter pylori* (ATCC 43504). Furthermore, plant tissues showed significant antioxidant activities using DPPH and SOD assays. GC-MS analysis of extracts revealed bioactive compounds (diterpenes, anthraquinones, alkaloids, organic acids) in these extracts.

In the second part of the study, bioactive compounds were fractionated into anthraquinones, alkaloids, diterpenes and phenolic compounds. Anthraquinones extracts from the fruit, leaf and root of *M. citrifolia* exhibited significant antibacterial activity against all strain of test bacteria. Anthraquinones extracted from the fruit have higher level of antioxidant activities compared to another parts of the plant. IR spectra of the anthraquinones extracts of *M. citrifolia* indicated the presence of O-H, C=O, C-H groups. A significant morphological change in cell wall, membrane and destruction of *B. cereus* was observed in the presence of anthraquinones.

Alkaloid extracts from the medicinal plants showed antibacterial activity against pathogenic bacteria including MRSA and *H. pylori* while *P. aeruginosa* was resistant to alkaloids extracted from *M. citrifolia* fruit. Alkaloid extracts from *A. squamosa* leaves have a high level of antioxidant activities. IR spectra of the alkaloid extracts indicated the presence of O-H, C=O, C-H and N-H groups. SEM observations of the action of alkaloids on bacterial cell wall showed rupture and cell lysis.

Phenolic compounds extract from plant mixture gave antibacterial and antioxidant activities. Diterpens extracts from *A. squamosa* fruit had significant antibacterial activity against pathogenic bacteria and MRSA and significant antioxidant activity. SEM observation of the action on bacterial cells showed disruption of cell wall and swelling of the cells. IR spectra of diterpenes and phenolic compounds indicated the presence of O-H, C-H, C=O and C-H groups. LC-MS analysis of bioactive compounds plants identified specific compounds.

In the third part of the study, antibacterial peptides extracted from lactic acid bacteria by the acidic methanolic method were shown to have activity against pathogenic bacteria including MRSA and *H. pylori* and had antioxidant activity. LC-MS analysis of peptide of *Lactobacillus paracasei* subsp. *paracasei* 8700:2 identified a novel bacteriocin in this extract.

Peptides extracts from the medicinal plants had significant antibacterial and antioxidant activities. LC-MS analysis of Australian plant mixture indicated the presence of Pathogenesis-related protein 2 of *Phaseolus vulgaris*. SEM and TEM analysis of the mechanism of action of purified peptides from lactic acid bacteria and APM showed membrane disruption with bubble-like formations and cell lysis.

## ABSTRAK

Tumbuhan ubatan dan bakteria asid laktik digunakan untuk merawat pelbagai penyakit. Tujuan kajian ialah untuk menentukan aktiviti agen antimikrob dan antioksidan sebatian bioaktif dan peptida dari bahagian-bahagian morologikal berbeza tumbuhan ubatan (*Morinda citrifolia*, *Annona squamosa*, *Alstonia angustiloba* dan tumbuhan Australia campuran) dan bakteria asid laktik. Dibahagian pertama kajian, pelbagai kaedah digunakan untuk menstandardkan pengekstrakan sebatian agen antimikrob dan antioksidan. Di dapati pengekstrakan metanol tisu tumbuh-tumbuhan menunjukkan aktiviti antimikrob lebih tinggi daripada ekstrak akueus terhadap bakteria ujian, *Staphylococcus aureus* (RF 122), *Escherichia coli* (UT181), *Bacillus cereus* (ATCC 14579), *Pseudomonas aeruginosa* (PA7), *Staphylococcus aureus* tahan methicillin (ATCC BA-43) dan *Helicobacter pylori* (ATCC 43504). Tambahan pula, tisu tumbuh-tumbuhan menunjukkan aktiviti penting antioksidan dengan menggunakan ujian DPPH and SOD. Analisis mergguntan GC-MS ekstrak mendedahkan sebatian bioaktif (diterpena, anthraquinones, alkaloid, asid organik) dalam ekstrak ini.

Dibahagian kedua kajian, sebatian bioaktif diasingkan kepada anthraquinones, alkaloid, diterpena dan sebatian fenol. Anthraquinones dari buah, daun dan akar *M. citrifolia* menunjukkan aktiviti antibakteria yang mynrbtan terhadap semua bakteria ujian. Anthraquinones dari buah mempunyai aktiviti-aktiviti antipengoksidan lebih tinggi berbanding dengan bahagian-bahagian lain tumbuhan. Spektrum IR ekstrak anthraquinones *M. citrifolia* menunjukkan kehadiran kumpulan-kumpulan O-H, C=O, C-H. Satu perubahan morfologi penting di dinding sel, membran dan kemusnahan sel bakteria *B. cereus* telah diperhatikan seuse kehadiran anthraquinones.

Alkaloid dari tumbuhan ubatan menunjukkan aktiviti antibakteria terhadap bakteria patogen termasuk MRSA and *H. pylori* manakala *P. aeruginosa* resistan kepada

alkaloid dari *M. citrifolia*. Alkaloid dari daun-daun *A. squamosa* mempunyai peringkat tinggi aktiviti-aktiviti antipengoksida. Spektrum IR ekstrak alkaloid menunjukkan kehadiran kumpulan-kumpulan O-H, C=O, C-H dan N-H. Pemerhatian-pemerhatian SEM menunjukkan tindakan alkaloid pada dinding sel bakteria menunjukkan kepecahan dan lisis.

Sebatian fenolik dari campuran tumbuhan menunjukkan aktiviti antibakteria dan antioksidan. Diterpena dari buah *A. squamosa* mempunyai aktiviti penting antibakteria terhadap bakteria patogen dan MRSA dan kegiatan antioksidan yang signifikan. Pemerhatian SEM menunjukkan gangguan dinding sel bakteria dan pembengkakan sel. Spektrum IR diterpena dan sebatian fenol menunjukkan kehadiran O-H, C-H, C=Kumpulan-kumpulan O and C H. Analisis LC-MS sebatian bioaktif telah mengenal pasti sebatian-sebatian khusus dalam ekstrak.

Dibahagian ketiga kajian, peptida antibakteria dari bakteria asid laktik, diasingkan dengan kaedah methanolik berasid, menunjukkan keaktifan terhadap bakteria patogen termasuk MRSA and *H. pylori* dan mempunyai aktiviti antioksidan. Analisis LC-MS peptida *Lactobacillus paracasei* subsp. *paracasei* 8700:2 mengenal pasti satu bakteriosin novel dalam ekstrak ini.

Ekstrak peptida dari tumbuhan ubatan mempunyai aktiviti antibakteria penting dan aktiviti-aktiviti antipengoksida. Analisis LC-MS tumbuhan Australia campuran menunjukkan kehadiran protein berkaitan dengan Pathogenesis 2 *Phaseolus vulgaris*. Analisis SEM and TEM menunjukkan mekanisme tindakan peptida tulen dari bakteria asid laktik dan APM menunjukkan gangguan membran bakteria dengan formasi seperti gelembung dan lisis sel.

## ACKNOWLEDGMENTS

I would like to express my deep appreciation to my supervisor, Associate Professor Dr. Koshy Philip and Co-Supervisor Professor Dr. Sekaran Muniandy for their support, comments and remarks throughout my PhD project. It was a great opportunity to work with them and be under their supervision.

I would like also to express my appreciation to Dato' Professor Dr. Mohd Sofian Azrium, Dean of Faculty of Science and Professor Dr. Rosli Hashim, Head of Institute of Biological Sciences, Faculty of Science, University of Malaya for favorable environment for research.

I wish to acknowledge the facilities at University of Malaya and the High Impact Research – Ministry of Higher Education Grant UM.C/625/1/HIR/MOHE/SC/08 account number F000008-21001 and IPPP grant (PV034/2011A).

I also wish to acknowledge the facilities provided at the Malaysian Genome Institute, Bangi, Malaysia and the Proteomics Center at the University of Victoria, Canada to analyse some of my samples.

My special thanks to go to all friends and technician of the Chemistry Department to analyse my samples and providing some facilities to complete this work.

Thanks are due to all the technician and office staff of the Faculty of Science, University of Malaya for providing facilities to complete this research. Special thanks to go Mr. Gaffar and all technicians in Microbiology Division, Institute of Biological sciences, Faculty of Science for his assistance to collect all plants samples during this work.

I am also grateful to my parents and all my family members in Iraq for their continuous support, encouragement and prayers to complete my research. Finally, I would like to make special thanks to my wife and my children's for patient, encouragement and they help me to all steps of this work.

ABDULMUHSIN MOSLIM SHAMI

## LIST OF SYMBOLS AND ABBREVIATIONS

ADP	Adenosine diphosphate
AGC target	Automatic gain control
APM	Australian plant mixture
ATCC	American Type Culture Collection
<i>B. cereus</i>	<i>Bacillus cereus</i>
BHT	Butylated Hydroxyl Toluene assay
CCl <sub>4</sub>	Carbon tetrachloride
CFU	Colony forming units
CO <sub>2</sub>	Carbon dioxide
DMPD	N.N. dimethyl-p-phenyldiamine
DMSO	dimethyl sulfoxide
DNA	Deoxyribonucleic acid
DPPH	2, 2- diphenyl-1- picrylhydrazyl solution
<i>E. coli</i>	<i>Escherichia coli</i>
ESI	Electrospray ionization
FDR	The false discovery rate
FTC	Ferric thiocyanate assay
FT-CID method	Fourier transform - Collision-induced dissociation method
FT-ICR	Fourier transform ion cyclotron resonance
FTIR	Fourier transform infrared spectroscopy
g	Gram
GAE	gallic acid equivalence
GC-MS	Gas chromatography–mass spectrometry

<i>H. pylori</i>	<i>Helicobacter pylori</i>
HCl	Hydrochloric acid
HPLC	High-performance liquid chromatography
hr	Hour
IC <sub>50</sub>	The half maximal inhibitory concentration
IR	Infrared spectroscopy
KB cells	KERATIN-forming tumor cell line
KDa	Kilodaltons
kV	Kilovolt
<i>L. casei</i>	<i>Lactobacillus casei</i>
<i>L. paracasei</i>	<i>Lactobacillus paracasei</i>
LC-MS	Liquid chromatography–mass spectrometry
LTQ Orbitrap	Linear ion trap and the proprietary Orbitrap
<i>m/z</i>	Mass-to-charge ratio
MBC	Minimum bactericidal concentration
mg	Milligram
MIC	Minimum inhibitory concentration
min	Minute
µm	Micrometer
mm	Millimeter
MRS broth	De Man-Rogosa-Sharpe broth
MRSA	Methicillin- resistant <i>Staphylococcus aureus</i>
ms	Microscan
MTT	3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyltetrazolium bromide
NaCl	Sodium chloride
NADPH	Nicotinamide adenine dinucleotide phosphate

NCIM	National Collection of Industrial Microorganisms
nm	Nanometer
O <sub>2</sub> <sup>-</sup>	superoxide anion
OD	Optical density
OH	hydroxyl radical
<i>P. aeruginosa</i>	<i>Pseudomonas aeruginosa</i>
PCR	polymerase chain reaction
rRNA	Ribosomal RNA
<i>S. aureus</i>	<i>Staphylococcus aureus</i>
SD	Standard deviation
SDE	Simultaneous distillation – solvent extraction
SEM	Scanning Electron Microscopy
SOD assay	Superoxide dismutase assay
TBA	Thiobarbituric acid assay
TEM	Transmission Electron Microscopy
TFA	Trifluoroacetic acid
3 D	Tertiary structure
TLC	Thin layer chromatography

## LIST OF APPENDICES

	<b>Page</b>
<b>Appendix 1.</b> GC-MS chromatogram of aqueous extract from <i>A. squamosa</i> fruit.	<b>200</b>
<b>Appendix 2.</b> GC-MS chromatogram of the methanolic extracts of <i>A. squamosa</i> fruit.	<b>201</b>
<b>Appendix 3.</b> GC-MS chromatogram of the methanolic extracts of <i>A. squamosa</i> leaves.	<b>202</b>
<b>Appendix 4.</b> GC-MS chromatogram of the methanolic extracts of <i>M. citrifolia</i> fruit.	<b>203</b>
<b>Appendix 5.</b> IR spectra of anthraquinones extracted from the fruit of <i>M. citrifolia</i> .	<b>204</b>
<b>Appendix 6.</b> IR spectra of anthraquinones extracted from the leaves of <i>M. citrifolia</i> .	<b>204</b>
<b>Appendix 7.</b> IR spectra of anthraquinones extracted from the roots of <i>M. citrifolia</i> .	<b>205</b>
<b>Appendix 8.</b> IR spectra of alkaloids extracted from the fruit of <i>M. citrifolia</i> .	<b>205</b>
<b>Appendix 9.</b> IR spectra of alkaloids extracted from the leaves of <i>A. squamosa</i> .	<b>206</b>
<b>Appendix 10.</b> IR spectra of alkaloids extracted from the roots of <i>A. angustiloba</i> .	<b>206</b>
<b>Appendix 11.</b> IR spectra of diterpens extract from the fruit of <i>A. squamosa</i> .	<b>207</b>
<b>Appendix 12.</b> IR spectra of the phenolic compounds from Australian plant mixture.	<b>207</b>
<b>Appendix 13.</b> MS/MS spectrum of 1-hydroxy-2-methylanthraquinone extracted from the fruit of <i>M. citrifolia</i> at <i>m/z</i> 239.2117.	<b>208</b>

- Appendix 14.** MS/MS spectrum of hydroxy-1,5-dimethoxy-6-methoxymethyl anthraquinones extracted from the fruit of *M. citrifolia* at  $m/z$  329.3221. **208**
- Appendix 15.** MS/MS spectrum of morindolin extracted from the fruit of *M. citrifolia* at  $m/z$  345.2424. **209**
- Appendix 16.** MS/MS spectrum of 1,1-*Oi-O*-methyl morindol extracted from the fruit of *M. citrifolia* at  $m/z$  315.1353. **209**
- Appendix 17.** MS/MS spectrum of 1,2-dihydroxyanthraquinone extracted from the fruit of *M. citrifolia* at  $m/z$  241.221. **210**
- Appendix 18.** MS/MS spectrum of 1,3-6 Trihydroxy-2-methoxyanthraquinone extracted from the fruit of *M. citrifolia* at  $m/z$  287.2385. **210**
- Appendix 19.** MS/MS spectrum of 1,2-dihydroxyanthraquinone extracted from the leaves of *M. citrifolia* at  $m/z$  241.1434. **211**
- Appendix 20.** MS/MS spectrum of 1-hydroxy-2,3-methoxyanthraquinone extracted from the leaves of *M. citrifolia* at  $m/z$  285.3341. **211**
- Appendix 21.** MS/MS spectrum of 2,6-dihydroxy-1,3-methoxyanthraquinone extracted from the leaves of *M. citrifolia* at  $m/z$  301.1413. **212**
- Appendix 22.** MS/MS spectrum of 2-hydroxy-1-methoxyanthraquinone extracted from the leaves of *M. citrifolia* at  $m/z$  255.2099. **212**
- Appendix 23.** MS/MS spectrum of 2-hydroxy-1,5-dimethoxy-6-(methoxymethyl) anthraquinone extracted from the leaves of *M. citrifolia* at  $m/z$  329.2678. **213**
- Appendix 24.** MS/MS spectrum of 3-hydroxy-2-hydroxymethyl-1-methoxyanthraquinone extracted from the roots of *M. citrifolia* at  $m/z$  285.0785. **213**

<b>Appendix 25.</b>	MS/MS spectrum of 6-hydroxy-1,3-dimethoxy-1-7-methylanthraquinone extracted from the roots of <i>M. citrifolia</i> at <i>m/z</i> 299.3437.	<b>214</b>
<b>Appendix 26.</b>	MS/MS spectrum of 2-Ethoxy-1-hydroxyanthraquinone extracted from the roots of <i>M. citrifolia</i> at <i>m/z</i> 269.2453.	<b>214</b>
<b>Appendix 27.</b>	MS/MS spectrum of 3-hydroxy-1-methoxyanthraquinone-2-aldehyde extracted from the roots of <i>M. citrifolia</i> at <i>m/z</i> 283.2653.	<b>215</b>
<b>Appendix 28.</b>	MS/MS spectrum of pelletierine extracted from the fruit of <i>M. citrifolia</i> at <i>m/z</i> 142.1201.	<b>215</b>
<b>Appendix 29.</b>	MS/MS spectrum of sedamine extracted from the fruit of <i>M. citrifolia</i> at <i>m/z</i> 206.1101.	<b>216</b>
<b>Appendix 30.</b>	MS/MS spectrum of pseudopelletierine extracted from the fruit of <i>M. citrifolia</i> at <i>m/z</i> 207.1359.	<b>216</b>
<b>Appendix 31.</b>	MS/MS spectrum of halosine extracted from the fruit of <i>M. citrifolia</i> at <i>m/z</i> 173.1413.	<b>217</b>
<b>Appendix 32.</b>	MS/MS spectrum of lycopodine extracted from the fruit of <i>M. citrifolia</i> at <i>m/z</i> 267.1764.	<b>217</b>
<b>Appendix 33.</b>	MS/MS spectrum of corydine extracted from the leaves of <i>A. squamosa</i> at <i>m/z</i> 342.1366.	<b>218</b>
<b>Appendix 34.</b>	MS/MS spectrum of sanjoinine extracted from the leaves of <i>A. squamosa</i> at <i>m/z</i> 328.1750.	<b>218</b>
<b>Appendix 35.</b>	MS/MS spectrum of norlaureline extracted from the leaves of <i>A. squamosa</i> at <i>m/z</i> 296.1270.	<b>219</b>
<b>Appendix 36.</b>	MS/MS spectrum of norcodeine extracted from the leaves of <i>A. squamosa</i> at <i>m/z</i> 286.2870.	<b>219</b>

<b>Appendix 37.</b>	MS/MS spectrum of oxanalobine extracted from the leaves of <i>A. squamosa</i> at <i>m/z</i> 293.1047.	<b>220</b>
<b>Appendix 38.</b>	MS/MS spectrum of aporphine extracted from the leaves of <i>A. squamosa</i> at <i>m/z</i> 236.0960.	<b>220</b>
<b>Appendix 39.</b>	MS/MS spectrum of echitamine extracted from the roots of <i>A. angustiloba</i> at <i>m/z</i> 386.2201.	<b>221</b>
<b>Appendix 40.</b>	MS/MS spectrum of 3-H-indole extracted from the roots of <i>A. angustiloba</i> at <i>m/z</i> 257.3020.	<b>221</b>
<b>Appendix 41.</b>	MS/MS spectrum of 1-H-indole extracted from the roots of <i>A. angustiloba</i> at <i>m/z</i> 243.1372.	<b>222</b>
<b>Appendix 42.</b>	MS/MS spectrum of alstilobanine B extracted from the roots of <i>A. angustiloba</i> at <i>m/z</i> 343.1308.	<b>222</b>
<b>Appendix 43.</b>	MS/MS spectrum alstilobanine E extracted from the roots of <i>A. angustiloba</i> at <i>m/z</i> 357.2427.	<b>223</b>
<b>Appendix 44.</b>	MS/MS spectrum of hydroxybenzoic acid-hexoside extracted from the Australian plant mixture at <i>m/z</i> 300.1060.	<b>223</b>
<b>Appendix 45.</b>	MS/MS spectrum of luteolin extracted from the Australian plant mixture at <i>m/z</i> 286.2754.	<b>224</b>
<b>Appendix 46.</b>	MS/MS spectrum of isohamnetin extracted from the Australian plant mixture at <i>m/z</i> 316.3205.	<b>224</b>
<b>Appendix 47.</b>	MS/MS spectrum of apigenin-7-O-rutinoside extracted from the Australian plant mixture at <i>m/z</i> 578.4190.	<b>225</b>
<b>Appendix 48.</b>	MS/MS spectrum of quercetin extracted from the Australian plant mixture at <i>m/z</i> 302.1466.	<b>225</b>
<b>Appendix 49.</b>	MS/MS spectrum of HHDP-gallogluco-pyranoside extracted from the Australian plant mixture at <i>m/z</i> 635.4841.	<b>226</b>

- Appendix 50.** MS/MS spectrum of dicaffeoyquinic acid extracted from the Australian plant mixture at  $m/z$  516.3569. **226**
- Appendix 51.** MS/MS spectrum of rosmadial extracted from the Australian plant mixture at  $m/z$  344.3171. **227**
- Appendix 52.** MS/MS spectrum of caffeic acid extracted from the Australian plant mixture at  $m/z$  342.2722. **227**
- Appendix 53.** MS/MS spectrum of kuaran-18-al extracted from the fruit of *A. squamosa* at  $m/z$  347.3158. **228**
- Appendix 54.** MS/MS spectrum of extracted from 16,17,19-kauranetriol the fruit of *A. squamosa* at  $m/z$  322.2053. **228**
- Appendix 55.** MS/MS spectrum of kauren-18-ol extracted from the fruit of *A. squamosa* at  $m/z$  331.2253. **229**
- Appendix 56.** MS/MS spectrum of kaur-16-ene extracted from the fruit of *A. squamosa* at  $m/z$  273.1714. **229**
- Appendix 57.** MS/MS spectrum of stigmasterol extracted from the fruit of *A. squamosa* at  $m/z$  413.2656. **230**
- Appendix 58.** MS/MS spectrum of annosquamosin B extracted from the fruit of *A. squamosa* at  $m/z$  309.2027. **230**
- Appendix 59.** 16S rDNA sequences of *Lactobacillus casei* BL 23 isolated from fermented soy milk. **231**
- Appendix 60.** 16S rDNA sequences of *Lactobacillus paracasei* subsp. *paracasei* 25302 isolated from cow milk. **232**
- Appendix 61.** 16S rDNA sequences of *Lactobacillus paracasei* subsp. *paracasei* 8700:2 isolated from cow milk. **233**
- Appendix 62.** Effect of active peptide extracted from *Lactobacillus paracasei* subsp. *paracasei* 8700:2 by scanning electron

	microscope. (A) Control: <i>B. cereus</i> . (B), (C) and (D) <i>B. cereus</i> treated with peptide.	<b>234</b>
