Table 3.5Spray dryer operating conditions
Table 3.6Details of powder X-ray diffraction (XRD)
Table 3.7 Layer thickness (h, in µm), from which 90% of the fluorescence radiation originates
Table 3.8Feed gas ratio for 12 Nanoflow reactors
Table 4.1Feed gas ratio
Table 4.2Catalytic performance of different preparation method on undiluted
$Mo_1V_{0.3}Te_{0.23}Nb_{0.12}$ catalyst
Table 4.3Catalytic performance over different preparation method
on diluted $Mo_1V_{0.3}Te_{0.23}Nb_{0.12}$ oxide catalyst
Table 5.1Readings of different measurements recorded for $Mo_1V_{0.30}Te_{0.23}Nb_{0.125}$
synthesis with in-situ LabMax
Table 5.2Summary of Raman band positions in aqueous solutions (Beato, A. Blume <i>et al.</i> 2006).
Table 5.3Lists of sample prepared
Table 5.4Phase composition compared to catalytic performance in undiluted
MoVTeNb oxide system

Table 5.5	Phase composition compared to catalytic performance in diluted
	MoVTeNb oxide system
Table 5.6	Molar ratio of elements normalized to Mo for undiluted system
Table 5.7	Molar ratio of elements normalized to Mo for diluted system
Table 5.8	FTIR absorption band position and their assignment for samples prepared
Table 5.9	Band position for reference transition metal oxide
Table 5.10	Surface area for undiluted and diluted catalyst
Table 5.11	Purpose of DSC and TGA techniques
Table 5.12	Weight loss at various steps and temperature under air flow as obtained from the thermal analysis data
Table 5.13	Weight loss at various steps and temperature under argon flow as obtained
	from the thermal analysis data
Table 5.14	DSC temperature profiles for all undiluted and diluted MoVTeNb oxide catalyst
Table 5.15	Total number of oxygen atoms removed from the catalysts by hydrogen and
14010 5.15	labile oxygen
Table 6.1	List of samples MoVTeNb samples selected for surface modification
Table 6.2	<i>Rieveld</i> quatification analysis for non-leached and leached in different solvent
Table 6.3	Elemental composition for leaching samples
Table 6.4	Quantitative analysis for undiluted and diluted leached in H_2O for 1 h
	and 24 h by TOPAS.
Table 6.5	XRF analysis of undiluted and diluted MoVTeNb oxide catalyst
	before and after surface purification.
Table 6.6	Phase composition and catalytic performance of MoVTeNb oxide
	catalyst
