

ABSTRACT

Beliefs are “general assumptions that students hold about themselves as learners, about factors influencing language learning, and about the nature of language learning and teaching” (Victori & Lockhart 1995, P.224). Language learners’ beliefs lead their actions, particularly in the process of learning. Learners’ beliefs can help teachers to have a better understanding of the learners’ learning process and their success in classrooms. According to Horwitz (1988), “ knowledge of students’ beliefs about language learning may provide teachers of languages with a better understanding of their students’ expectations of, commitment to, success in and satisfactions with language classes” (Horwitz, 1988 : 283).

Although, there have been many studies on the notion of beliefs about language learning so far, yet very few of them explored Iranian students’ beliefs about English language learning. In an attempt to fill this gap, this research was conducted to find out: 1) What are Iranian postgraduate students’ beliefs about English language learning? 2) Is there any shift in their beliefs after attending English classes? 3) What is the role of gender on their beliefs about language learning? In order to achieve the objectives of the research and to answers to the above research questions, this study employed Horwitz’s model (Beliefs About Language Learning Inventory, BALLI 1988). BALLI is based on the normative approach and it is used to investigate Iranian postgraduate students’ beliefs about English language learning at the University of Malaya (UM) in Kuala Lumpur, Malaysia. Data was collected from 30 Iranian students, 15 males and 15, females at two different periods of time through distributing a modified 34-items questionnaire based on Horwitz’s BALLI (1988). The Pre-test data was collected at the beginning of the compulsory English course/s for the participants and the post- test data was gathered at the end of the same classes in order to find out whether there was a shift in their beliefs about English language learning after a period of one semester of instructions or not. The BALLI in this study measured students’

beliefs about learning English in five main categories namely: 1) Difficulty of Language Learning, 2) Foreign Language Learning, 3) The Nature of Language Learning, 4) Learning and Communication Strategies and 5) Motivation and Expectations. Moreover, a semi-structured interview based on the BALLI's items was done in order to get more information and insights about the respondents' beliefs about English language learning. Through a descriptive analysis and a statistical analysis (by using SPSS version 16) the findings of this study show that Iranian postgraduate students in UM held a variety of beliefs about learning English. The results of t-test indicate there was not much difference in their beliefs before attending the English classes and after being instructed for a period of one semester. In terms of gender, both male and female students held firm beliefs about learning English and the only significant shift in their beliefs was related to the males' beliefs about English language learning in the "Foreign Language Aptitude" category. The findings enhance our understanding of how exploring learners' beliefs can guide us to better meet learners' needs, expectation and their aims in the process of English language learning.

ABSTRAK

Kepercayaan adalah "andaian umum pelajar tentang diri mereka sebagai pelajar, tentang faktor-faktor yang mempengaruhi pembelajaran bahasa, dan tentang sifat pembelajaran dan pengajaran bahasa" (Victori & Lockhart 1995, m.s. 224). Kepercayaan pelajar bahasa menentukan tindakan mereka, terutamanya dalam proses pembelajaran. Menurut Horwitz (1988), "pengetahuan tentang kepercayaan pelajar berkaitan pembelajaran bahasa boleh memberi guru-guru bahasa pemahaman yang lebih baik tentang harapan pelajar mereka, komitmen mereka terhadap kejayaan dalam dan kepuasan dengan kelas bahasa" (Horwitz, 1988: 283). Walaupun setakat ini terdapat banyak kajian terhadap tanggapan kepercayaan tentang pembelajaran bahasa, tidak banyak yang telah meneroka kepercayaan pelajar Iran mengenai pembelajaran bahasa Inggeris. Dalam usaha untuk mengisi jurang ini, kajian ini telah dijalankan untuk mengetahui: 1) Apakah kepercayaan pelajar pascasiswazah Iran mengenai pembelajaran bahasa Inggeris? 2) Adakah terdapat perubahan dalam kepercayaan mereka selepas menghadiri kelas bahasa Inggeris? 3) Apakah peranan jantina ke atas kepercayaan mengenai pembelajaran bahasa? Bagi mencapai objektif kajian dan menjawab soalan-soalan penyelidikan di atas, kajian ini menggunakan model Horwitz (Inventori Kepercayaan Perihal Pembelajaran Bahasa, BALLI 1988). BALLI adalah berdasarkan pendekatan normatif itu dan ia digunakan untuk mengkaji kepercayaan pelajar pascasiswazah Iran mengenai pembelajaran bahasa Inggeris di Universiti Malaya (UM) di Kuala Lumpur, Malaysia. Data telah dikumpulkan daripada 30 orang pelajar Iran, 15 orang lelaki dan 15 perempuan dalam dua tempoh masa yang berbeza dengan mengedarkan satu soal selidik 34-item yang diubahsuai berdasarkan Horwitz BALLI (1988). Data Pra-ujian telah dikumpul pada awal kursus wajib Bahasa Inggeris untuk peserta dan data pasca-ujian telah dikumpul di akhir kelas yang sama untuk mengetahui sama ada berlaku anjakan dalam kepercayaan mereka tentang pembelajaran bahasa Inggeris selepas pengajaran

selama satu semester. BALLI dalam kajian ini digunakan untuk mengukur kepercayaan pelajar mengenai pembelajaran Bahasa Inggeris bagi lima kategori utama iaitu: 1) Kesukaran Pembelajaran Bahasa 2) Pembelajaran Bahasa Asing, 3) Sifat Pembelajaran Bahasa, 4) Strategi Pembelajaran dan Komunikasi dan 5) Motivasi dan jangkaan. Selain dari itu, temu bual separa berstruktur yang berdasarkan item BALLI telah dijalankan untuk mendapatkan lebih banyak maklumat dan pandangan tentang kepercayaan responden mengenai pembelajaran bahasa Inggeris. Melalui analisis deskriptif dan analisis statistik (dengan menggunakan perisian SPSS versi 16), dapatan kajian ini menunjukkan bahawa pelajar pascasiswazah Iran di UM mempunyai pelbagai kepercayaan tentang pembelajaran bahasa Inggeris. Dapatan ujian-t menunjukkan tidak banyak perbezaan dalam kepercayaan mereka sebelum menghadiri kelas bahasa Inggeris dan selepas emndapat pengajaran selama tempoh satu semester. Dari aspek jantina, kedua-dua pelajar lelaki dan perempuan mempunyai kepercayaan yang kuat mengenai pembelajaran Bahasa Inggeris dan anjakan kepercayaan yang signifikan ialah yang berkaitan dengan kepercayaan pelajar lelaki tentang pembelajaran bahasa Inggeris bagi kategori "Aptitud Bahasa Asing". Dapatan ini mengukuhkan pemahaman kita tentang bagaimana pengajaran kepercayaan boleh membantu untuk memenuhi keperluan, jangkaan dan matlamat pelajar dalam proses pembelajaran bahasa Inggeris.

ACKNOWLEDGMENTS

All praise and thanks to God who has helped me throughout my entire life.

I wish to express my deepest sense of gratitude to Associate Professor Dr. Karen Kow Yip Cheng, my supervisor for her invaluable guidance, support and encouragement throughout every step of my study. I am especially thankful to her for touching my life too with her kind heart and prayers. May the almighty Lord's blessings, love and peace be with you Dr. Karen.

I wish to express my endless love and appreciation to my lovely sons Daniel and Artin (Michael) for all their sacrifices, patience, understanding and encouragement during my endeavor. Their presence in my life along with their heartfelt prayers shed light to my darkest days and gave me hope and strength to overcome my obstacles and complete my research. Being with them without a doubt is a blessing from above and without them I would not be what I am today.

My heartfelt appreciation, love and gratitude go to my husband, Mr. Ali Sorayyaie for his patience, understanding, continues support and encouragement. I doubt that I will ever be able to convey my appreciation fully, but I owe him my eternal gratitude.

A very special thanks goes to my dear family and friends Mrs. Hilda Delavari and Mr. Behzadian (my Master, Moj) for their invaluable support, friendship, help and encouragement.

I would like to thank the participants of this study and all those who helped in the completion of this research in one way or another.

Last but not the least , I am deeply and forever indebted to my late parents and I wish to dedicate this dissertation to the loving memory of them who left me so soon but thought of them being spiritually with me helped me complete my study.
