The understanding in ITIF in Malaysian construction industry – the body of the interview!

24. We know in today’s IT environment, IT changes rapidly – very fast. Statistic shows that in the construction industry itself, 6 new technologies are invented every month. Nowadays, people are moving to flexible infrastructure. Meaning that, infrastructure that could adapt and cope with the technology changes. So, my first question regarding to this, have you ever heard about IT infrastructure flexibility before?

- No
- Yes

If yes, what do you understand about it?

If no, how do you think we could cope with the technological change?

25. Do you think that your company is actually implementing this concept in your IT development?

- No
- Yes

If no, how do you think your company copes with this situation?

Other comment?

- Yes

If yes, do you believe that by having flexible IT infrastructure, your company will save cost and time? And what other benefits can you see from ITIF?

Factors in achieving IT infrastructure flexibility

26. Connectivity
To have flexible IT infrastructure, do you agree that IT should be able to communicate with any other component
inside/outside the company, anytime and anywhere?

27. Compatibility
How about the information sharing? Do you agree that IT should be able to share any information across any technology component?

28. Modularity
In the future, do you agree that IT should be easily reconfigured without a need to re-invent from scratch?

29. IT knowledge
In handling infrastructure, what do you think about having skilled IT officer with IT-related qualification, as well as, good in managing IT.

30. Business knowledge
Do you think that having IT officer who understands construction-business nature is very important?

31. Management skills
What other criteria do you think is important in term of IT staff issue? Do you think their management skills contribute developing flexible infrastructure that can cope with technological change?

32. Channel management
In developing an IT project, do you believe that the company needs to provide good channel management system? For example like call-centers and websites? So that the company could get feedback from end-users as well.

33. Security & risk management
Does your IT projects come with security policies, disaster planning, and firewalls?

34. Communication
Is it important for your company to provide a wide range of communication services, for example broadband, external services, and network services?

35. Data management
Does your company practice data management system, for example like centralized data warehouse, knowledge management, or any other system?

☐ No
Could you please explain more, why?

36.  Application infrastructure (Pr)
Do you agree by providing a wide range of application infrastructure would help in developing flexible IT infrastructure? For example, wireless application and middleware.

☐ Yes
☐ No
Notes:

Others

37.  Do you have something to add about what criteria/factor an IT project should have in order to achieve a flexible IT infrastructure that could cope with technological change?

Comments:

Thank you very much for your cooperation and support.
