 <b>CHAPTER ONE: INTRODUCTION AND LITERATURE REVIEW</b>	
1.1 Introduction	1
1.1.1 Objectives of the study	5
1.2 Literature Review	6
1.2.1 Papillomavirus research, a history	6
1.2.2 Human papillomavirus (HPV)	7
1.2.3 HPV and cervical cancer	12
1.2.4 HPV classification and genome organization	13

1.2.5 HPV life cycle	15
1.2.6 Function of the viral proteins	17
1.2.6.1 The early proteins	17
1.2.6.2 The late proteins, L1 and L2	19
1.2.7 HPV oncoproteins, E6 and E7	19
1.2.7.1 HPV E6	19
1.2.7.2 HPV E7	21
1.2.7.3 E6 and E7 play a key role in cellular transformation	24
1.2.7.4 Control of cell cycle and its disruption by high risk HPV E7	25
1.2.8 The tumour suppressor protein ‘ Retinoblastoma protein’	28
1.2.8.1 The tumour suppressor protein pRB and cancer	28
1.2.8.2 pRB degradation	29
1.2.8.3 pRB belongs to the pocket protein family and exerts different function	30
1.2.9 Pocket proteins	32
1.2.9.1 Pocket proteins and cell cycle regulation	34
1.2.10 dREAM and DRM complex	37
1.2.10.1 The discovery of a novel <i>Drosophila</i> RBF/MIP130 repressor and	37

*C. elegans* DRM complexes

1.2.10.2	The function of novel human Lin9/pocket protein complexes	39
1.2.10.3	The DREAM/LINC complex	42

## **CHAPTER TWO: MATERIALS AND METHODS**

2.1	Solutions and media	46
2.1.1	General solutions	46
2.1.2	Agarose gel solutions	47
2.1.3	SDS-PAGE and western blotting solutions	48
2.1.4	Transfection solutions	49
2.1.5	Immunoprecipitation solutions	50
2.1.6	GST binding assay solutions	50
2.2	Molecular biology	51
2.2.1	Synthetic oligonucleotides	51
2.2.2	Total RNA extraction	52
2.2.3	Quantitation of RNA	52
2.2.4	Generation of cDNA for real-time PCR	53
2.2.5	Real-time PCR	53
2.2.6	Cloning of short hairpin RNA (shRNA)	55
2.2.6.1	Materials	55
2.2.6.1.1	Media for bacterial cell growth	55
2.2.6.1.2	Bacterial strains and plasmids	56
2.2.6.1.3	Antibiotic solution for bacterial culture	56

2.2.6.2	Designing shRNA oligos for pLKO.1 vector	59
2.2.6.2.1	Determining the optimal 21-mer targets in selected genes	59
2.2.6.2.2	Ordering oligos compatible with pLKO.1 vector	59
2.2.6.3	Restriction digests	60
2.2.6.4	Agarose gel electrophoresis	61
2.2.6.5	DNA purification from agarose gels	61
2.2.6.6	DNA ligations	61
2.2.6.7	Production of chemically competent bacterial cells	61
2.2.6.8	Transformation of chemically competent bacterial cells	62
2.2.6.9	Screening of colonies	62
2.2.6.10	Small scale purifications of plasmid DNA (miniprep)	63
2.2.6.11	Preparation of glycerol stock	64
2.2.6.12	Large scale purification plasmid DNA (maxiprep)	64
2.2.6.13	Sequencing	64
2.2.7	Producing lentiviral particles	64
2.2.8	Mutagenesis	66
2.3	Cell culture	68
2.3.1	Types of cell lines	68
2.3.2	Maintenance and subculturing of cell lines	70
2.3.3	Preservation, storage and revival of cells	70
2.3.4	Cell counting and seeding	71

2.4 In vivo protein expressions and analysis	73
2.4.1 Transfection analysis	73
2.4.1.1 Transient transfection protocol ‘FuGENE 6’	73
2.4.1.2 Transient transfection by calcium phosphate co-precipitation	73
2.4.1.3 Stable transduction by lentiviral system	74
2.4.2 Nuclear extraction	76
2.4.3 Protein estimation using Bradford assay	76
2.4.4 Proteins co-immunoprecipitation (co-IP)	77
2.4.5 Antibodies	77
2.4.6 Sodium dodecyl sulphate polyacrylamide gel electrophoresis (SDS- PAGE), immunoblotting and enhanced chemiluminescent (ECL) detection of proteins	79
2.5 <i>In vitro</i> GST-E7 binding assay	81
2.6 Flow cytometry analysis	82
2.6.1 Cell cycle analysis	82
2.6.2 Bromodeoxyuridine (BrDU) staining	82
2.6.3 Mitotic index	83
2. 7. Statistical test	83
2.7.1 Students’ t-test	83

## CHAPTER THREE: RESULTS

3.1 DREAM complexes	84
3.1.1 Analysis of DREAM complexes in T98G,C33A, SiHa and CaSki cell lines	87
3.2 Interference of 16E7 RNA in HPV-transformed cell lines	90
3.2.1 Effects of 16E7 depletion on pocket protein/DREAM complexes in CaSki and SiHa cells	90
3.3 Disruption of pocket protein/DREAM complexes by different HPV E7 types	100
3.4 Human papillomaviruses disrupt p130/DREAM complexes through different mechanisms	107
3.4.1 Identification of DREAM complex in CaSki expressing various types p130 mutants	107
3.4.2 HPV 16E7 targets p130 predominately through direct interactions via the LXCXE motif	117
3.4.3 HPV 48E7 disrupts p130/DREAM via CDK2 phosphorylation	123
3.5 Function of the B-myb/DREAM complex in CaSki cells	129

## CHAPTER FOUR: DISCUSSION

4.1 Investigation of the DREAM complexes in cervical cancer cells	137
4.2 HPV16 E7 disrupts p130/DREAM complex	139
4.3 Depletion of HPV E7 results in cell cycle arrest and reformation of the p130/DREAM complex	141
4.4 Re-expression of p53 tumour suppressor protein in E7-depleted CaSki cells	143
4.5 G1 arrest is dependent on DREAM complex reformation	144
4.6 All HPV types are capable to degrade the p130/DREAM complex	145
4.7 HPV disrupts p130/DREAM complexes through different mechanisms	147
4.7.1 Defective in the B pocket of p130 abrogate the HPV-transformed cells proliferation	151
4.7.2 HPV48 E7 disrupts p130/DREAM via CDK2 phosphorylation	152
4.8 B-myb/DREAM as an activating complex in cell cycle progression	153
4.8.1 B-myb/DREAM complex is not critical in CaSki to regulate the G2/M genes	156
4.9 p130 localization	157
4.10 Disruption of pRB/Lin9 interaction by the E7 proteins	158

## **CHAPTER FIVE: CONCLUSIONS**

5.1 Conclusion	161
----------------	-----

## **CHAPTER SIX: RUTURE WORK**

6.1 Future work
