

APPENDICES

Appendix A: Isolation and purification of antibody IgG from hyperimmunized serum in rabbits

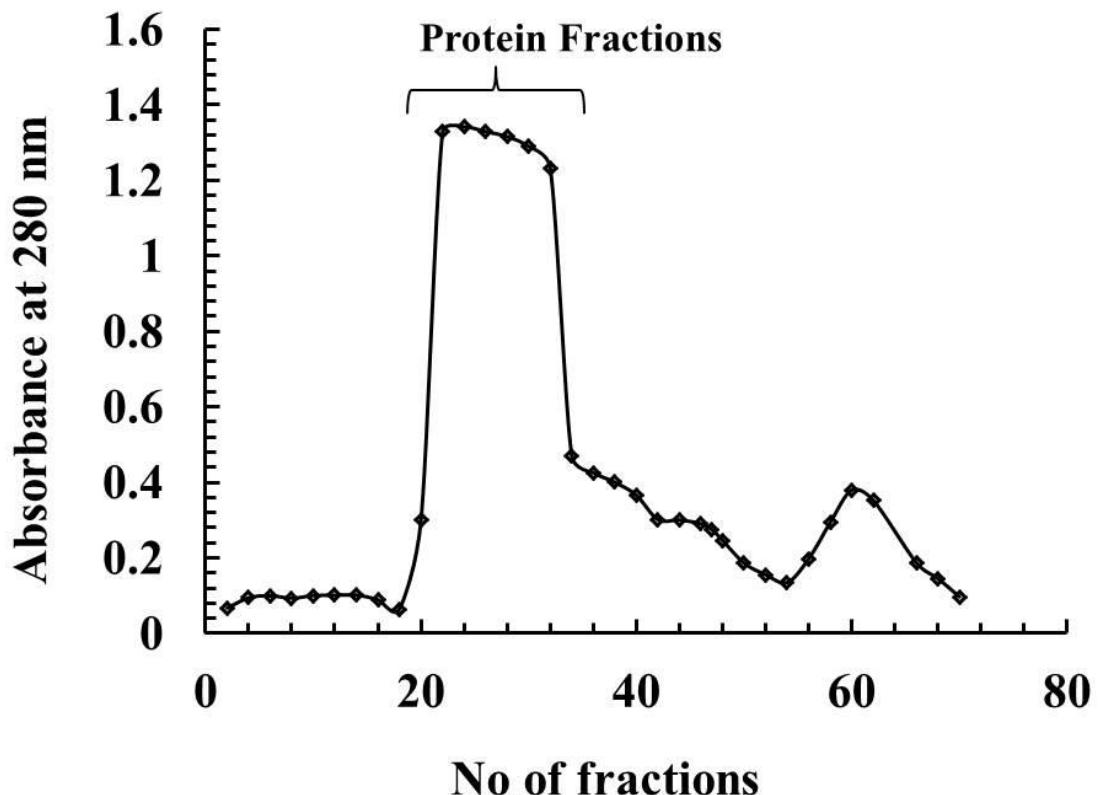

Figure A1: Sephadex® G-25 gel filtration chromatography of protein fractions from hyperimmunized serum in rabbits.

Sephadex® G-25 gel filtration column chromatography (30 mm x 480 mm) was equilibrated with 0.05% (v/v) acetic acid. The flow rate was 30 ml/h and fractions of 5 ml were collected. Protein content was measured by absorbance at 280 nm.

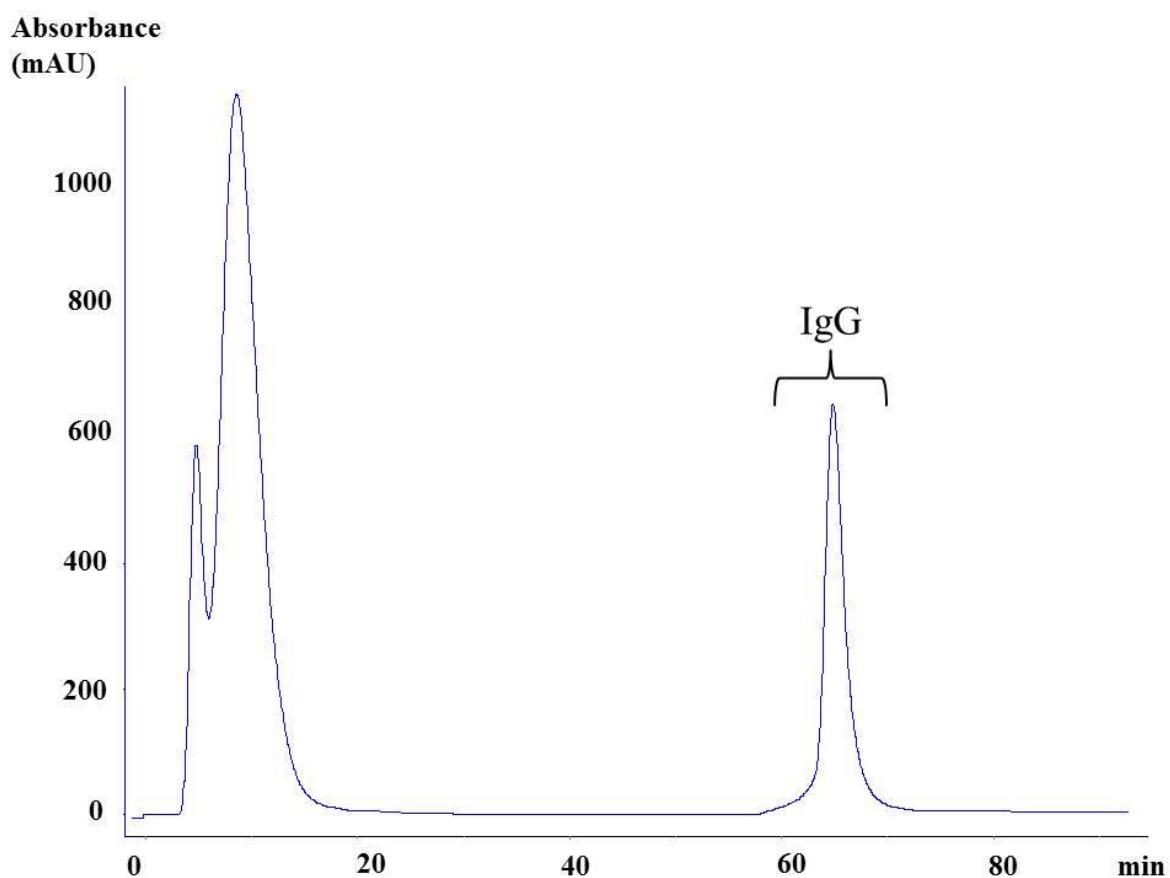

Figure A2 : HiTrap Protein A HP affinity column chromatography (5 ml) of desalted protein fractions.

The antibody IgG was eluted with a linear gradient (0-100%) between binding buffer (20 mM sodium phosphate, pH 7) and elution buffer (0.1 M citric acid, pH 3) at a flow rate of 5 ml/min. The pH of IgG fractions collected manually was adjusted by adding 100 μ l of 1 M Tris-HCl, pH 9.0 per ml of fractions.

Appendix B: Standard curve for protein quantitation

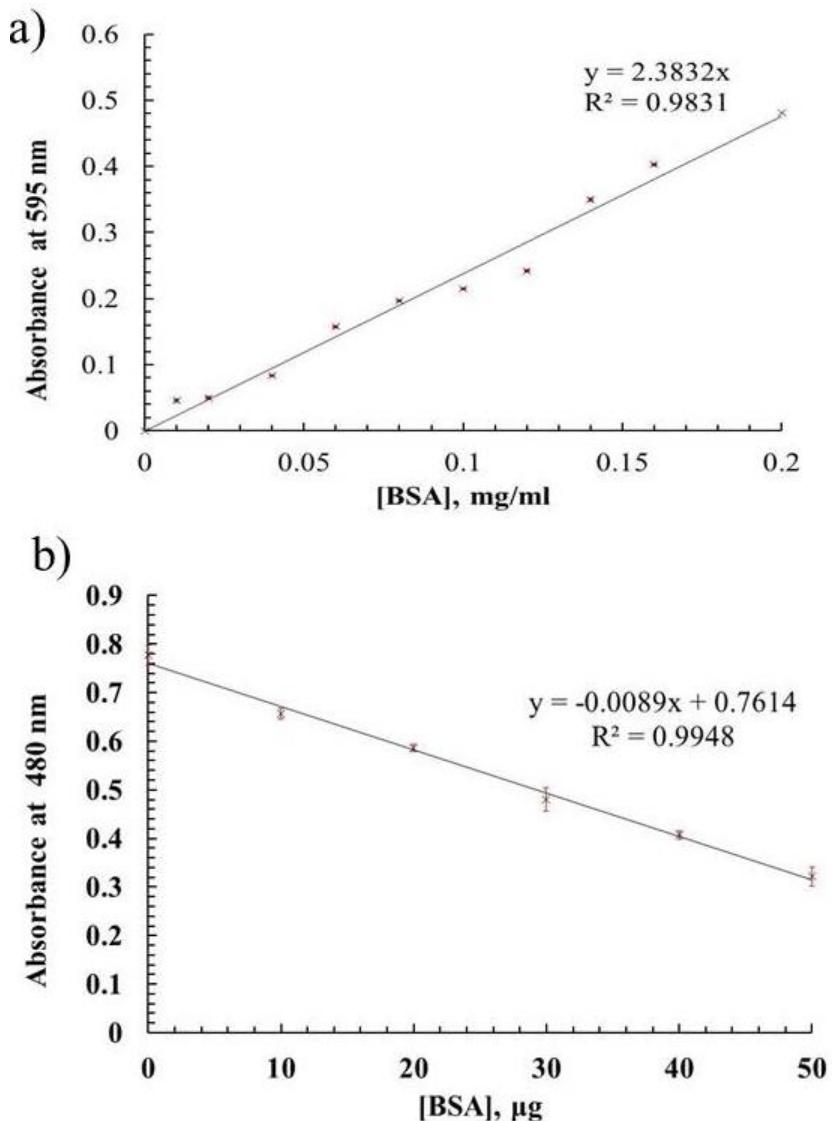

Figure B1: Standard curve of Bovine serum albumin (BSA) for the determination of protein concentration in venom samples.

- The absorbance at 595 nm was plotted against concentration of BSA (mg/ml), in Bradford assay (Bradford, 1956).
- The absorbance at 480 nm was plotted against concentration of BSA (μ g), in 2-D Quant Kit.

Appendix C: Standard curves for determination of enzyme activities

C1 Standard curve of phosphate for determination of 5'-nucleotidase activity by ascorbic acid method (Chen *et al.*, 1956)

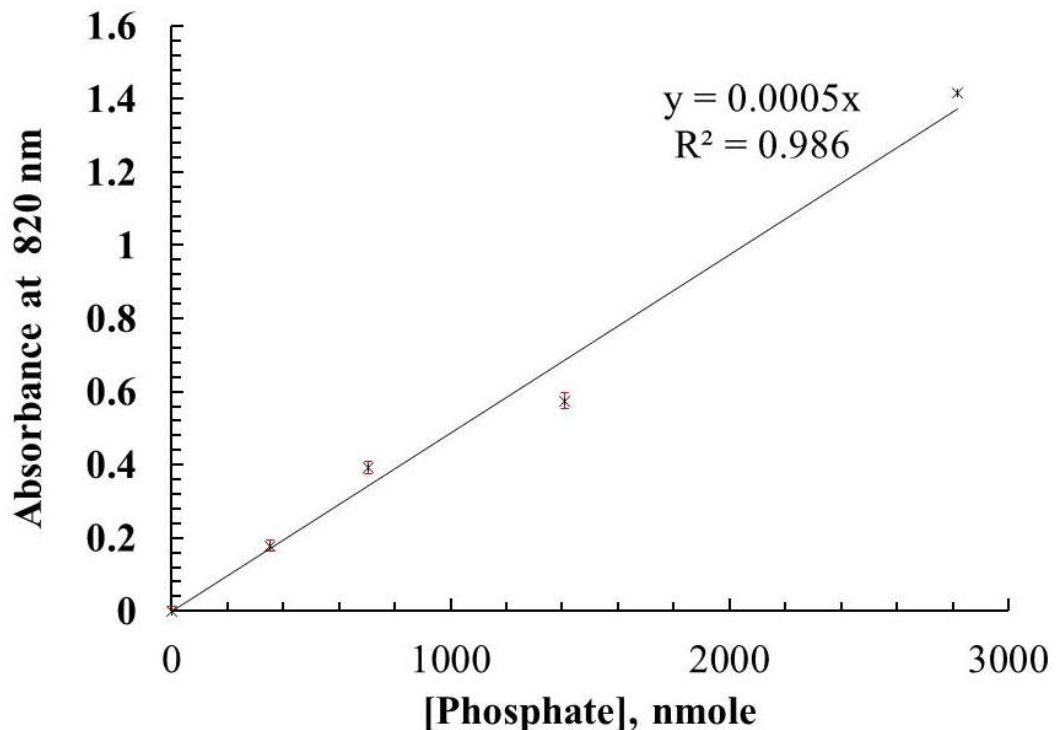

Figure C1: Standard curve of phosphate for the measurement of phosphate concentration liberated in 5'-nucleotidase enzymatic reaction.

The absorbance at 480 nm was plotted against known concentration of phosphate in nmole.

C2 Standard curve of standard Hyaluronidase for determination of hyaluronidase activity by turbidimetric method (Dorfman and Ott, 1948)

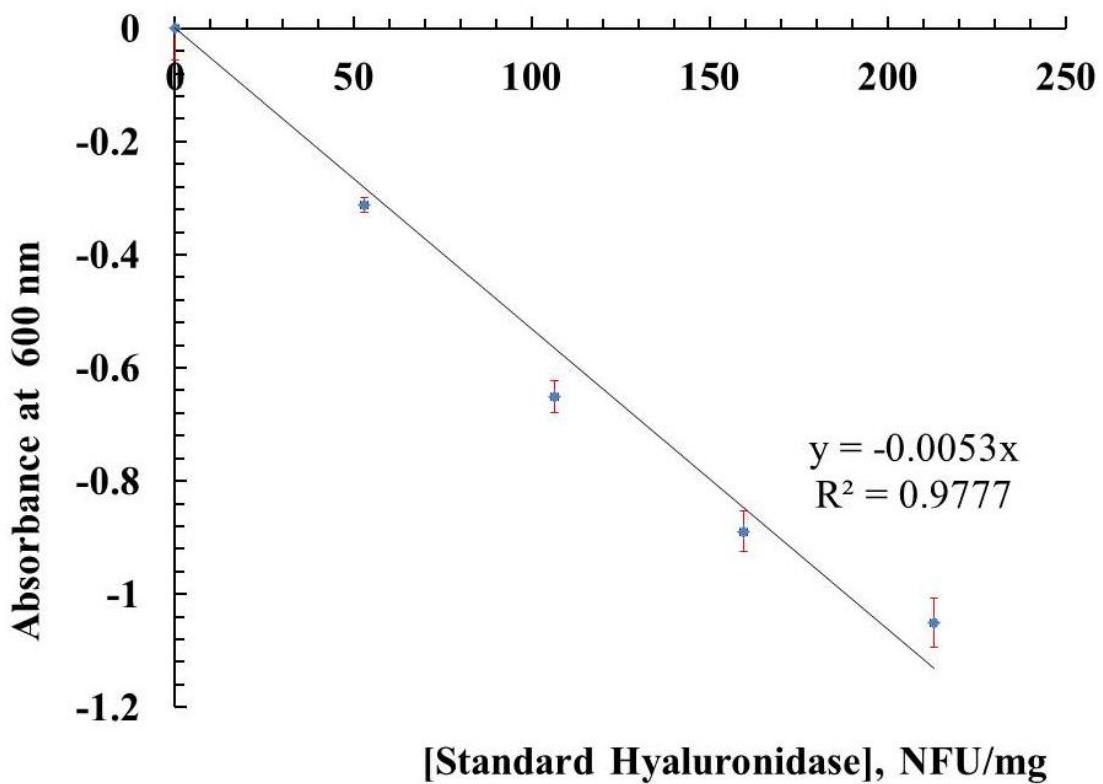

Figure C2: Standard curve of hyaluronidase for the determination of hyaluronidase activity.

The absorbance at 600 nm was plotted against known concentration of standard hyaluronidase in National Formulary Unit (NFU)/mg.

Appendix D: Standard curve of venom/venom toxin antigens

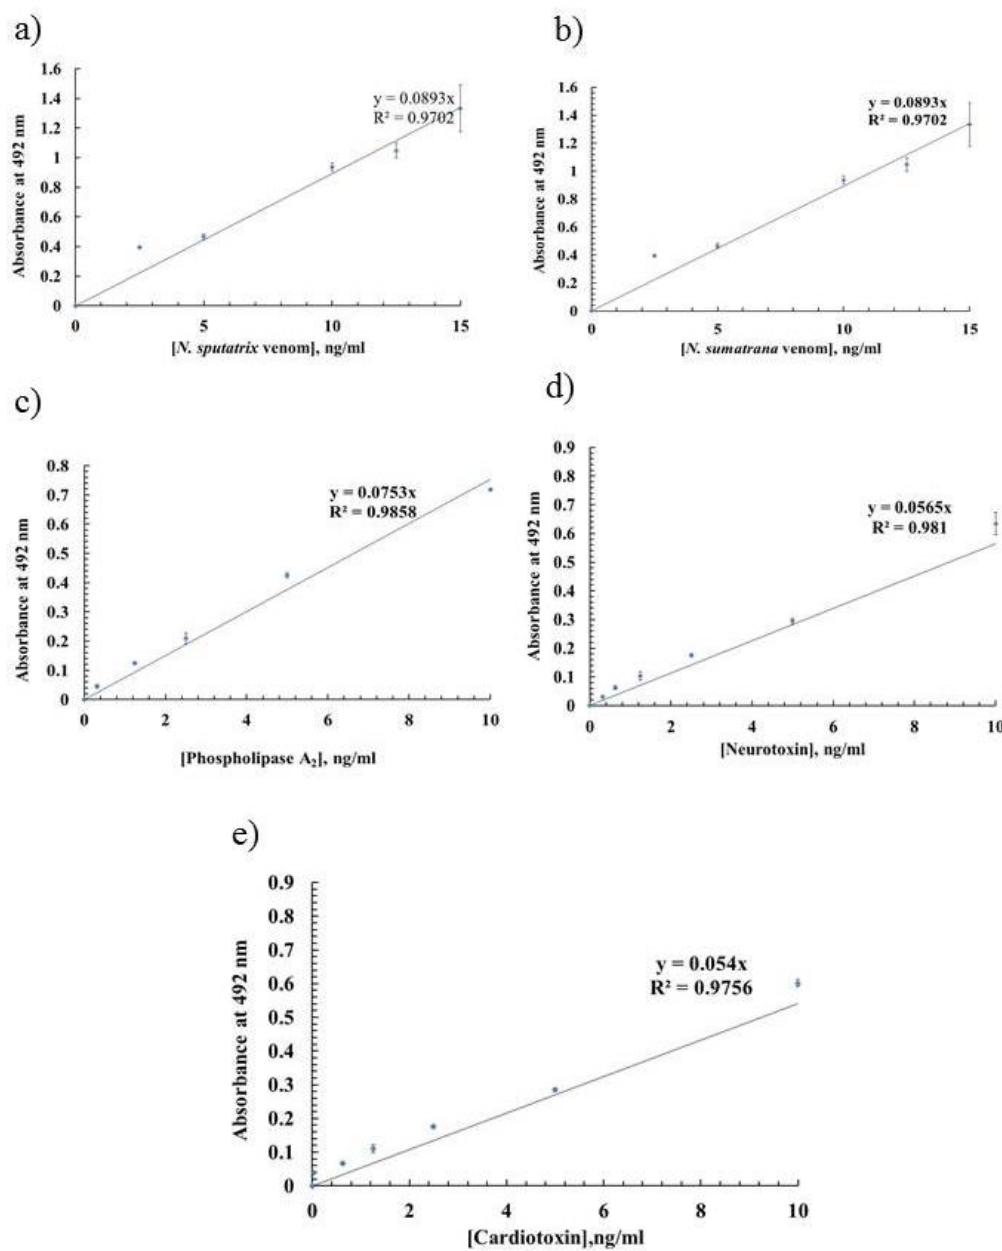

Figure D1: Standard curve of venom/venom toxin antigens in spiked pre-envenomed sera.

a) *N. sputatrix* venom antigens; b) *N. sumatrana* venom antigens; c) Phospholipase A₂ antigens; d) Neurotoxin antigens and e) Cardiotoxin antigens.

Appendix E: Serum concentration of venom/venom toxin antigens

Table E1: Serum concentration of *N. sputatrix* venom antigens following intravenous administration of *N. sputatrix* venom into rabbits (n = 3).

- a) Pharmacokinetics of *Naja sputatrix* (Javan spitting cobra) venom and the effect of a neuro polyvalent antivenom, 11-15 Sep 2011, 17th Congress of EU section of International Society of Toxinology, International Society of Toxinology (International).
- b) Biochemical and toxinological studies of *Naja sumatrana* (Equatorial spitting cobra) venom, 27-28 July 2011, 36th Annual Conference of MSBMB, Malaysian Society of Biochemistry and Molecular Biology (National).
- c) Pharmacokinetics of *Naja sputatrix* (spitting cobra) venom in rabbits, 22 -24 Mar 2011, 11th Southeast Asian Western Pacific Regional Meeting of Pharmacologist, The Japanese Pharmacological Society (International).
- d) Serum kinetics of *Naja sputatrix* (spitting cobra) venom in rabbit and immunological responses in rabbits immunized with *Naja sputatrix* venom and venom components, 27 -28 July 2010, 35th Annual Conference of The Malaysian Society of Biochemistry and Molecular Biology (National).

Appendix J: List of manuscripts submitted

1. Michelle Khai Khun Yap, Shin Yee Fung, Kae Yi Tan, Nget Hong Tan. Proteomic characterization of venom of the medically important Southeast Asian *Naja sumatrana* (Equatorial spitting cobra), submitted to Acta Tropica (ISI-Indexed Publication).
2. Michelle Khai Khun Yap, Nget Hong Tan, Si Mui Sim, Shin Yee Fung. The effect of a polyvalent antivenom on the pharmacokinetics of *Naja sputatrix* (Javan spitting cobra) venom in experimentally envenomed rabbits, submitted to International Immunopharmacology (ISI-Indexed Publication).
3. Michelle Khai Khun Yap, Nget Hong Tan, Si Mui Sim, Shin Yee Fung, Choo Hock Tan. Pharmacokinetics of *Naja sumatrana* (Equatorial spitting cobra) venom and its major toxins in experimentally envenomed rabbits, submitted to PLoS NTD (ISI-Indexed Publication).

Appendix K Ethical Clearance for laboratory animal use

3rd July 2013

Dr. Fung Shin Yee
Department of Molecular Medicine
Faculty of Medicine

Dear Researcher,

Biomedical and Toxicological Studies on Snake Venom Proteins

This is to inform you that the FOM Institutional Animal Care and Use Committee, University of Malaya (FOM IACUC) has approved your Animal Use Protocol with the above mentioned title for duration of one (1) year until June 2014.

Please be advised that should you require changes to be made to the approved protocol, you are responsible to submit an application for amendments. Failure to do so may result in the Approval of your Animal Research Protocol be withdrawn by FOM IACUC.

Your Ethics Reference no. : 2013-06-07/MOL/R/FSY

Thank you.

Yours sincerely,

A handwritten signature in black ink, appearing to read "K L Voon".

Dr. Kiew Lik Voon
Acting Chairperson
Faculty of Medicine Institutional Animal Care and Use Committee (FOM IACUC)
