# CHAPTER 1: INTRODUCTION

1.0 Introduction  
1.1 Background information  
  1.1.1 End Stage Renal Disease and haemodialysis  
  1.1.2 Common problems in haemodialysis patients  
    1.1.2.1 Hypertension  
    1.1.2.2 Fluid overload and weight gain  
  1.1.3 Noncompliance  
  1.1.4 Strategies for noncompliance  
1.2 Problem statement  
  1.2.1 Statistics  
  1.2.2 Previous studies  
  1.2.3 Personal interest  
1.3 Research Questions  
1.4 Research aims and Objectives  
1.5 Significance of study  
  1.5.1 Patients  
  1.5.2 Nursing Practice  
  1.5.3 Organization
CHAPTER 2: LITERATURE REVIEW

2.0 Introduction
2.1 Literature search
   2.1.1 Criteria
   2.1.2 Sources
   2.1.3 Keywords
   2.1.4 Results of key studies
2.2 Haemodialysis treatment
2.3 Hypertension in haemodialysis
2.4 Interdialytic weight gain
2.5 Noncompliance in haemodialysis
2.6 Improving compliance in haemodialysis patients
   2.6.1 Educational interventions
   2.6.2 Multidimensional intervention
2.7 Patient education in end stage renal disease
2.8 Cognitive Theory
   2.8.1 Observational learning
   2.8.2 Mental states are important to learn
   2.8.3 The Modeling Process
2.9 Conceptual framework
2.10 Summary
# CHAPTER 3: METHODOLOGY

3.0 Introduction 52

3.1 Study design 52

3.2 Study setting 53

3.2.1 Study hospital 54

3.3 Population and sample 56

3.3.1 Target population 56

3.3.2 Sample criteria 57

3.3.3 Sample size 58

3.4 Instruments 60

3.4.1 Questionnaire 60

3.4.2 Questionnaire Validity and Reliability 61

3.4.3 Patient Data Collection Sheet 63

3.5 Data collection method 64

3.5.1 Phase 1: Survey and retrieve information from patients’ record 64

3.5.2 Phase 2: Educational intervention 65

3.5.2.1 Teaching plan and guides 66

3.5.2.2 Patient Information Booklet 68

3.5.3 Data collection process 68

3.5.4 Post intervention data collection 71

3.6 Analysis of data 73

3.7 Ethical considerations 74

3.8 Pilot study 75

3.9 Summary 75
CHAPTER 4: RESULTS

4.0 Introduction 76

4.1 Study sample 76

4.2 Patients’ characteristics 77

4.2.1 Pre-intervention fluid overload experience and symptoms 80

4.2.2 Source of information about fluid and salt control 81

4.3 Pre-intervention knowledge about fluid and salt control 83

4.3.1 Analysis of questionnaire 83

4.4 Assessment of the level of knowledge and its association with source of information pre-and post-intervention 86

4.4.1 Knowledge level pre-and post-intervention in both experimental and control groups 86

4.4.2 Association between knowledge level and ever received information 87

4.5 Comparison of the mean total knowledge on fluid and salt control by demographic and clinical characteristics pre-and post-intervention between experimental and control groups 89

4.5.1 Comparison of the mean total knowledge scores by demographic and clinical characteristics (Group) 89

4.5.1.2 Comparison of the mean total knowledge scores by demographic and clinical characteristics (Post hoc analysis) 93

4.5.2 Comparison of pre-and post-intervention mean total knowledge scores for experimental and control groups 98

4.6 Evaluating the effectiveness of patient education on knowledge improvement for both experimental and control groups 99

4.6.1 Evaluating the effectiveness of the educational intervention on the level of knowledge on fluid and salt control for both experimental and control groups 99

4.7 Determining predictors and associations between knowledge levels, demographic and clinical factors at post-intervention for the experimental group 102
4.7.1 Factors associated with knowledge improvement on fluid and salt control post-intervention.

4.8 Determining fluid compliance pre- and post- intervention in the experimental and control group

4.8.1 Comparison of fluid compliance at pre- and post-intervention for both the experimental and control groups

4.8.2 Trends of fluid compliance at pre- and post-intervention for both the control and experimental group

4.8.3 Fluid compliance levels pre- and post-intervention for both the experimental and control groups.

   a) Interdialytic weight gain (IDWG)

   b) Mean pre-dialysis blood pressure (MPBP)

   c) Rate of fluid adherence (RFA)

4.9 Evaluating the effectiveness of patient education on fluid compliance improvement at 1-, 3- and 6-month post-intervention for both the experimental and control groups.

4.9.1 Fluid compliance outcome at 1-month post-intervention for both the experimental and control groups

4.9.2 Outcome for fluid compliance at 3-month post-intervention for both experimental and control groups

4.9.3 Outcome for fluid compliance at 6-month post-intervention for both the experimental and control groups.

4.10 Determining the predictors and association between fluid compliance, demographic factors and knowledge post-intervention in the experimental group.

4.10.1 Factors associated with fluid compliance improvement at 1-, 3-, and 6-month post intervention for the experimental group

4.10.1.1 Factors associated with interdialytic weight gain (IDWG) compliance improvement at 1-, 3- and 6-month post-intervention in the experimental group

   a) Factors associated with IDWG compliance improvement and predictors of compliance improvement on the IDWG: comparing the baseline to 1-month post-intervention
b) Factors associated with the IDWG compliance improvement and predictors of compliance improvement on the IDWG: comparing the baseline to 3-month post-intervention for the experimental group.

c) Factors associated with IDWG compliance improvement and predictors of compliance improvement on the IDWG: comparing the baseline to 6-month post-intervention for the experimental group.

4.10.1.2 Factors associated with MPBP compliance improvement at 1-, 3-, and 6-month post-intervention in the experimental group.

a) Factors associated with the MPBP compliance improvement and predictors of compliance improvement on the MPBP: comparing the baseline to 1-month post-intervention for the experimental group.

b) Factors associated with the MPBP compliance improvement and predictors of compliance improvement on the MPBP: comparing the baseline to 3-month post-intervention for the experimental group.

c) Factors associated with the MPBP compliance improvement and predictors of compliance improvement on the MPBP: comparing the baseline to 6-month post-intervention for the experimental group.

4.10.1.3 Factors associated with compliance improvement on the RFA at 1-, 3-, and 6-month post-intervention for the experimental group.

a) Factors associated with RFA compliance improvement and predictors of compliance improvement on the RFA: comparing the baseline to 1-month post-intervention for the experimental group.
b) Factors associated with RFA compliance improvement and predictors of compliance improvement on the RFA: comparing the baseline to 3-month post-intervention for the experimental group. 152

c) Factors associated with RFA compliance improvement and predictors of compliance improvement on the RFA: comparing the baseline to 6-month post-intervention for the experimental group. 155

4.11 Summary 158

CHAPTER 5 DISCUSSION

5.0 Introduction 160

5.1 Sample characteristics 160

5.2 Fluid overload experience and symptoms 161

5.3 Sources of information on fluid and salt control 161

5.4 Analysis of questionnaire 163

5.5 Knowledge on fluid and salt control 163
  5.5.1 Knowledge level pre-and post-intervention 163
  5.5.2 Association of knowledge level with ever received information 164

5.6 Mean total knowledge scores pre-and post-intervention 165
  5.6.1 Mean total knowledge by demographic and clinical characteristics 165

5.7 Effectiveness of patient education on knowledge improvement post-intervention 166

5.8 Factors associated with knowledge improvement on fluid and salt control post-intervention for the experimental group 167

5.9 Fluid compliance status during the pre- and post-intervention stage 170
  5.9.1 Fluid compliance levels 170
    5.9.1.1 Interdialytic weight gain (IDWG) 170
    5.9.1.2 Mean predialysis blood pressure (MPBP) 171
5.9.1.3 Rate of fluid adherence (RFA) 173

5.9.2 Trends of fluid compliance between experimental phases 174

5.10 Effectiveness of educational intervention on fluid compliance improvement 176

5.11 Factors associated with fluid compliance 178

5.11.1 Factors associated with interdialytic weight gain (IDWG) compliance improvement at 1-, 3-, and 6-month 178

5.11.2 Factors associated with mean predialysis blood pressure (MPBP) compliance improvement at 1-, 3-, and 6-month post intervention 180

5.11.3 Factors associated with rate of adherence (RFA) compliance improvement at 1-, 3-, and 6-month 181

5.12 Summary 183

CHAPTER 6 CONCLUSION

6.0 Introduction 185

6.1 Implications for practice 190

6.2 Recommendations 191

6.2.1 Practice 191

6.2.2 Education 193

6.2.3 Research 194

6.3 Limitations 196

6.4 Summary 197
