

ACKNOWLEDGEMENTS

First and foremost, *Alhamdulillah* (All praises to Allah) I would like to praise to Allah, the Creator of all kind of life caused for His permission, I'll be able to complete this dissertation. Also, I would like to express my deep appreciation towards my respected supervisors, Dr. Shaharudin Ab. Razak and Prof. Dr. Vikineswary Sabaratnam for providing me the meaningful opportunity to complete my master studies through their guidance, encouragement and supportive advice. Throughout this research, I've learnt some new ideas in expanding this research into high impact quality that will result in benefiting the human needs and society.

Also, thank to the great people of the Fish Nutrition Laboratory of Freshwater Fisheries Research Center, namely Mr. Hanan Mohd Yusuf, Mr. Tazril Amil Shafie and all staffs for their kindness during the experiment held and their willingness to share wide experiences about the fish nutrition aspect. Indeed, without technical assistance of handling HPLC by Mr. Abdul Halim Abdul Rahman and Ms. Norlinawati Abd Halim, this research will be incomplete and it was a great pleasure to have cooperation with them. For Aquatic Toxicology Laboratory members thanks again for their moral support and positive comments. Not to forget, Mdm. Cheng and all staff of Ganofarm Sdn. Bhd. for their assistance and consideration to provide mushroom stalk ingredients. I am truly indebted to University of Malaya for fellowship and PPP grant (PS270/2010A) to fund my research.

Finally, my sincere thanks goes to my parent, Mr. Mohd Din Ismail, Ms. Hayati Abd Rahman and my beloved siblings, Abd Rahman Makrimi, Nurul Asimah and Nurul Izzah for their moral support. And also special thanks go to my beloved wife, Khalila Bakri and my son, 'Umar Mukhtar who also being supportive and understanding to me throughout my studies. You deserve special appreciation.
