

Acknowledgement

First of all, I gratefully acknowledge Professor Dr. Chuah Cheng Hock for his guidance and comments in my postgraduate study. Besides, my special appreciation is dedicated to Dr. Ling Sui Kiong, whom has provided valuable suggestions, comments and patient guidance throughout the research work. Without them, I could not have the opportunity to complete this piece of work.

I would like to thank Forest Research Institute Malaysia (FRIM), Selangor for offering me the research assistantship. This work was completed with the financial supports of a grant (02-03-10-SF0066) from the Ministry of Science, Technology and Innovation and IPPP research grants (PS332/2008C and PS351/2010A) from the Institute of Research Management and Consultancy, University of Malaya.

My special gratitude is expressed to the Director of Natural Products Division, FRIM, Dr. Rasadah Mat Ali and the staff of Phytochemistry Program who have helped to create a pleasant environment in the laboratory. I would also like to express my sincere thanks to Ms. Tan Ai Lee and Dr. Helen Margaret Ruth Evans for the species identification. I am deeply grateful to Mr. Daniel Wong Zin Hua, Mr. Wong Yau Hsiung, Mr. Saiful Azmi Johari and Associate Professor Dr. Habsah Abdul Kadir for their technical assistance and permission to use the facilities in the neuroprotection, *in vitro* cytotoxicity and anti-MRSA.

Last but not least, I am indebted to my family members for the encouragement and enabling me to spend most of the time in the laboratory. I am also thankful to all my friends for their moral support. This piece of work might not be succeeded without their continuous support. Finally, this work is dedicated to my dearest mother and my late father (passed away on 4th February 2009) who always love and never give up on me.
