

PAMPHLET 4

The first years of life are important in the development of the immune system.

How can a healthy gut help your child's body defense?

Did you know...

- ✓ The immune system has the essential function to protect against diseases
- ✓ A healthy gut helps promote functions of the immune system-that can help a child's body defense because a major component of the immune system lies in the gastrointestinal tract¹

The importance of the immune system

- ✓ The immune system is a complex network of organs and cells, that protects children from infections caused by bacteria, viruses and other harmful substances
- ✓ At birth, the immune system of your child is not fully developed. The first years of your child's life are important in the development of the immune system^{2,3}

IMMUNOFORTIS™

- is a scientifically proven oligosaccharide mixture
- consists of 90% galacto-oligosaccharides(GOS) and 10% long chain fructo-oligosaccharides (lcFOS)
- helps increase intestinal bifidobacteria and helps maintain a good gut environment

A healthy gut supports the function of the immune system by

- increasing growth of good bacteria and decreasing growth of harmful bacteria
- reducing the risk of infection and diarrhoea
- promoting softer stool for easy bowel movement

Spend more time enjoying motherhood, less time worrying

Give your child the right protection that can help see him through the day
