

LIST OF TABLES

	Page
Table 2.1. Crystalline structure of cellulose.....	16
Table 3.1 Starch granule properties and general chemical characteristics of rice starch.....	32-33
Table 3.2 The starch granule properties and general chemical characteristics of tapioca starch.....	35
Table 3.3 Starch granule properties and general chemical characteristics of sago starch.....	38-39
Table 3.4 The compositions of the blended biocomposite films.....	53
Table 3.5 The compositions of the blended biocomposite films of PVA with different starches and fibers.....	53-54
Table 4.1 Infrared characteristics modes of vibrations and their wavenumbers for pure PVA.....	70
Table 4.2 Infrared characteristic modes of vibrations and their wavenumbers for starch in general.....	72
Table 4.3 Infrared characteristic modes of vibrations and their wavenumbers for alkaline treated natural fibers in general.....	74
Table 4.4 Diffraction peaks and corresponding d values of tapioca and sago starch.....	92
Table 4.5 Diffraction peaks and corresponding d values of rice starch.....	94
Table 4.6 The crystallinity indexes and the crystallite width of four treated fibers...	96
Table 4.7 The crystallite width of PVA blended with different percentages of different starches.....	99
Table 4.8 The crystallite widths of PVA blended with 10% of tapioca with different percentage of different treated fibers.....	106-107
Table 4.9 The glass transition temperature, T_g for PVA blended with different concentration of different starches.....	149
Table 4.10 The glass transition temperature, T_g and the melting temperature, T_m for the composites PVA blended with 10% of different starches and different concentration of different treated fibers.....	150-151
